

Subject: Oppose the Red Snapper Reallocation Scheme (Amendment 28)
Date: Wednesday, August 12, 2015 8:48:28 AM Eastern Daylight Time
From: Vicky DeLaCruz
To: Gulf Council

Dear Governor and Gulf Council Members:

I have a small family business on the coast of Florida.

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

To gulf council.

Thanks for opportunity to speak! I would really like to thank you for your open mindedness and fairness in giving the fed permitted charter boats the opportunity to carry the non boat owning public red snapper fishing! I carried 346 different passengers in the 44 days we were able to catch red snapper through the sector separation program! I feel it is a must to keep this program going! I am ready to purchase my own VMS or whatever system will make us able to count our fish and become 100 percent accountable.

I saw and agree 100 percent that the purely Rec fishery is totally out of control! It was sheer madness out of Perdido Pass(Orange Beach Al) for the first 9 days of June! I think the Feds actually do have this out of control effort figured to a tee!

It is only fair that the separation took place to keep the fed charter boats from going down with the ship due to all the non compliance from all 5 states that is taking place! As we were told if the CFH were coupled back with the purely recs we would all have had only a 12 day season! I am in favor if 34 " AJ if it will make the species reach sexual maturity bringing the spawning potential much higher! Hopefully less fish but nicer fish will be harvested allowing for a longer season!

As for trigger if either a larger size or maybe going to a 1 fish bag limit would get us some kinda season as this was the first year I have not been able to keep a trigger in 35 years of fishing! I think a stock assessment on the grey triggerfish would show they have rebounded greatly and could easily sustain a less strict bag or size limit!

I am in favor of a small reallocation only if group receiving fish is 100 percent accountable if not accountable status quo on reallocation!

Thx

Captain Bill Staff

Subject: Letter from Dr. Mike Orbach (via Wayne Werner)

Gulf Council members -

Attached is a letter sent in by Dr. Mike Orbach of the Duke University Marine Laboratory regarding Amendment 28. Dr. Orbach facilitated the development of the commercial red snapper IFQ program. He recounts that as far back as the early 1990s there was recognition that problems in the recreational fishery would have to be addressed through management reforms. Dr. Orbach's letter states his belief that reallocation would be unfair because it would "essentially be rewarding the recreational sector and the states for mismanagement of the recreational harvest of the Red Snapper resource," and that "this situation will ultimately not be resolved until the recreational sector is brought under clearly understood, monitorable, accountable and responsible management."

Please read Dr. Orbach's letter.

Thank you,

Wayne Werner

Doug Gregory
Executive Director
Gulf of Mexico Fishery Management Council

Dear Greg,

I would like to comment on the allocation alternatives in Draft Amendment 28 of the Fishery Management Plan for the Reef Fish Resources of the Gulf of Mexico, June 2015. In the spirit of full disclosure, I was employed as a contractor by the GMFMC in the late 1980s and early 1990s as a facilitator for the development of the original Red Snapper IFQ proposal which was approved by the GMFMC but which was subsequently held up for over a decade by Congressional action. When the IFQ program was finally approved and implemented, it was in approximately the same form in which we had originally designed it. That design was the product of over 30 consensus-building workshops which I moderated and which were held in ten locations around the Gulf of Mexico over a two year period. I am also a member of the Board of Directors of the Ocean Conservancy which, through our New Orleans office, worked with the Council to pass and implement the IFQ program in the last decade, and also plays a role in the restoration planning in the wake of the Deepwater Horizon oil spill.

When we were developing the commercial IFQ program in the early 1990s, there was discussion of the possibility of some form of limited access for the recreational sector in the Red Snapper fishery, everything from license limitation to some form of recreational IFQ. Even then there was the potential for over-runs of recreational harvest due to insufficient and lax management of that sector, including by the individual Gulf states. Our conclusion then was that we should focus on the commercial sector, because that was the sector that had the most to gain from IFQ management in support of the overall goals of the Reef Fish Plan. It was clear that the issues of the recreational fishery would have to be addressed in the long run.

However, the current allocation alternatives in Draft Amendment 28 again raise the question of both the effectiveness of the management of the recreational sector, including by the states, and of the appropriate allocation between the commercial and recreational sectors. There is, of course, no perfect allocation formula, and allocations will always have to be made on the basis of judgments based on biophysical and socioeconomic data, standards such as “fairness and equity”, and political values and interactions at both the state and federal levels. However, I would like to make two points.

First, it would be difficult to justify a reallocation of harvest from the commercial to the recreational sector on the basis of “fairness and equity” when the recreational sector has a significant history of over-runs of their historical allocation and in light of reluctance to engage in appropriate management by the Gulf states. Both of these factors are referenced in the amendment and supporting documents. This would essentially be rewarding the recreational sector and the states for mismanagement of the recreational harvest of the Red Snapper resource. This same comment applies to the objective of increasing the allocation to the recreational sector to in essence justify that sector’s over-runs.

In addition, the shift in draft Amendment 28 from the “net economic benefit” to the “fairness and equity” standard is a productive one, because it emphasizes the point that the issue is not just dollars, but the

“value” of those dollars to the different human communities in which they circulate. Commercial fishing communities are dependent on economic benefits in a very different way from recreational fishing communities, and those differences must be taken into account in allocation decisions under the M-SFCMA.

Second, this situation will ultimately not be resolved until the recreational sector is brought under clearly understood, monitorable, accountable and responsible management. That is what the IFQ system did – with the participation of commercial fishermen -- for the commercial sector. I believe that the Council has not fully considered alternatives for such management of the recreational sector.

For example, one of the most successful examples of the restoration of a fishery with both significant commercial and recreational components is that of the Atlantic Striped Bass fishery. In that case, stimulated by the plans of the Atlantic States Marine Fisheries Commission (ASMFC), the Commission and many of the individual states adopted a “tag” program for the recreational fishery wherein a limited number of “tags” were issued for each recreational fish allowed to be taken. This provided both a clear, accountable record of the number of fish taken by the recreational sector, and a means to limit that harvest in accordance with the prescribed quota. This system worked well because of the unique state-federal partnership formed under the Atlantic Coastal Fisheries Cooperative Fisheries Management Act (Atlantic Coastal Act), under which the federal government provides ‘back-up’ authority for the ASMFC in enforcing uniform state-federal management functions (that is, neither the states nor the federal government can manage such resources effectively on their own). I do understand that the situation in the Gulf is different from that of the Atlantic, owing to the absence of a Gulf of Mexico equivalent of the Atlantic Coastal Act, and that fish “tags” may or may not be the appropriate mechanism in the case of Red Snapper. However, advantage should be taken of examples such as Striped Bass to inform more effective management of the Gulf of Mexico Red Snapper fishery.

Thank you for your consideration of these comments.

Sincerely,

Michael K. Orbach
Professor Emeritus of Marine Affairs and
Policy

August 10, 2015

Kevin Anson, Chairman
Gulf of Mexico Fishery Management Council
2203 North Lois Avenue, Suite 1100
Tampa, Florida 33607

Dear Chairman Anson,

As a non-profit conservation based organization supporting U.S. fisherman operating in the Gulf of Mexico, Gulf Wild is setting the standard for genuine, responsibly caught, traceable and reliable wild domestic seafood. When you encounter the Gulf Wild trademark, it represents a level of integrity, honesty, professionalism and responsibility that is second to none.

When it comes to seafood, the Gulf Wild trademark ensures that your Grouper, Snapper and other seafood was harvested by US fishermen and came from a well-monitored and continuously improving fishery in the Gulf of Mexico under innovative conservation standards.

We write to you today to offer our support for Amendment 28 Alternative 1 (Status Quo) because we believe it's the only fair and justified alternative in the document.

Alternative 1 is the only fair alternative because it doesn't harm one sector to hurt another. Choosing Alternative 1 will show that the Council doesn't want to unfairly harm the 80%+ of Americans that want red snapper but can't catch it, and turn some of that access over to the 20% that already go catch it themselves. Alternative 1 is the only alternative in Amendment 28 that wasn't developed under an old "purpose and need" that was based on an economic theory that's now discredited. Keeping "status quo" recognizes that the recreational sector already lands 79% of eleven important fish in the Gulf (including two where commercial fishing is effectively prohibited), and that taking quota from the remaining 21% (commercial fishermen) is not fair.

Alternative 1 is the only alternative that promotes conservation because it keeps whole an accountable commercial sector that does not overharvest its allocation. Alternative 1 would also not facilitate a shift in fishing effort into the eastern Gulf where the red snapper stock is most vulnerable.

Alternative 1 promotes economic stability because it doesn't undermine commercial and seafood supply chain investments and impose economic harm on this sector. Supporting Alternative 1 will show that the Council supports stability and long-term business planning.

Gulf Wild opposes Alternative 8 because:

1. Recalibration demonstrates that the red snapper allowable biological catch (ABC) should have been higher, not that the 51%/49% commercial/recreational allocation formula should be changed - commercial fishermen should have had access to 51% of a higher ABC, not that their proportion of the total catch should now be reduced.
2. The MRIP recalibration analysis has been identified as a “preliminary, interim approach.”¹ The authors of that approach stressed that their calculations assume that the ratio of peak-period to total catch has remained constant across time, which they acknowledged may not be “defensible from a scientific point of view.”² That approach was apparently applied in the 2014 update assessment but it was only relevant to landings estimates for 2004–12. How the estimates for 1950–2003 were adjusted remains unknown.³
3. That recommendation was based on the simplest of three approaches considered by the workshop, apparently for no better reason than that the other two were not fully developed, while the simple one would be easier to explain. Restating their concern multiple times throughout the report, the MRIP workshop participants offered the following conclusion: “We recommend that investigation continue on the remaining two methods. It is possible that one of them will be determined to be better at some future date.”⁴ To our knowledge, this recommendation has not been followed and additional investigation has not formally continued on the two remaining methods. This should occur before recalibration can be formally considered for reallocation purposes.

Gulf Wild opposes Alternative 9 for the same reasons as we oppose Alternative 8 and in addition because:

1. Selectivity is a function of fishermen's behavior, which directly correlates to management decisions and biological implications. We can assess this looking backwards but can't accurately predict it moving forward because of the changing conditions of the fishery. It just doesn't make sense to make permanent allocation changes based on something that will continue to shift.
2. There is no documentation or support in Amendment 28 that confirms “Selectivity,” or the assumption that anglers are targeting larger fish. To the contrary, several scientists have indicated that, rather than a shift in targeting behavior, selectivity is more likely a function of anglers encountering the larger fish of strong year classes moving through the fishery, combined with recent poor recruitment in the eastern Gulf.⁵ In other words, anglers are catching larger fish not because they are targeting them, but because those fish are relatively more available.

Gulf Wild opposes all reallocation alternatives because:

1. Amendment 28 acknowledges that reallocation will harm the commercial sector, but will provide no benefit to the recreational sector because it does nothing to solve that sector's problems.⁶
2. Over 80% of Americans access their red snapper as seafood consumers, not by catching it themselves.⁷ Taking access to this fishery from 80% of the public and giving it to 10% is not fair or equitable. The

⁵ See Kenchington, at pp. 17-18; Letter to Gulf Council from James H. Cowan, Louisiana State University, dated August 7, 2015, at pp. 6-8.

⁶ Amendment 28 (June 2015) at p. 17.

⁷ 60 million US anglers in a population of 317.3 million, in 2013; <http://asafishing.org/newsroom/news-releases/new-report-highlights-recreational-fishings-broad-economic-and-conservation/>; <http://www.census.gov/popclock/>.

same two red snapper that provide one private angler's access can provide access for 18 (or more) seafood consumers. Taking access from 18 (or more) consumers and giving it to 1 recreational angler is not fair or equitable.

3. The public doesn't want reallocation. Of the 54 scoping comments that were received by NMFS during the Notice of Intent to Prepare an EIS (11/7/2013-12/9/2013), 54% (29) supported Alternative 1 (Status Quo).⁸ In fact, we think that there has been unanimous public testimony from commercial fishermen and nearly-unanimous public testimony from charter industry opposing reallocation. Also, it's our understanding that over *12,500 public comments* have been submitted to the Gulf Council, Gulf state Governors, and Congress that oppose reallocation.⁹
4. Amendment 28 clearly acknowledges that "it is not clear that the proposed reallocation alternatives would promote conservation, in light of the repeated and sizeable harvest overages recorded for the recreational sector"¹⁰ and therefore Amendment 28 violates National Standard 4.
5. According to the MRIP recalibration, the recreational sector caught 18 million pounds of red snapper more than they were allowed in recent years.¹¹ Based on the current 51%/49% commercial/recreational split between commercial and recreational allocations, commercial fishermen should've had access to 51% of that allocation (9.2 million pounds), valued at over \$35 million dollars.¹²
6. Finally, we believe the new Alternatives in Amendment 28 do not promote conservation because they could violate Section 407(d)(2) of the Magnuson-Stevens Fishery Conservation and Management Act (MSA). The implicit premise underlying Amendment 28, including the stated purpose of Alternatives 8 and 9, is to increase the recreational quota to reflect its prior harvests in excess of the recreational allocation. The MSA prohibits this - Section 407(d)(2) requires the Council to ensure that red snapper "quotas reflect allocations among such [commercial and recreational] sectors and do not reflect any harvests in excess of such allocations."¹³ Alternatives 8 and 9 would shift the entire increase in the annual catch limit (ACL) attributable to MRIP recalibration to the recreational sector.

Gulf Wild supports Alternative 1 (Status Quo) because we don't believe that our fishermen, the seafood supply chain, and the American seafood consuming public should be unfairly harmed by this disruptive proposal. Gulf Wild stands for conservation, and reallocation does not promote conservation. Gulf Wild stands for accountability, and reallocation does not promote accountability. Gulf Wild stands for fishermen ingenuity and problem-solving, and reallocation does neither. We hope that the Gulf Council will approve Alternative 1 (Status Quo) and move on to finding real, accountable, and stable long term solutions for the recreational fishery

Sincerely,

Jason DeLaCruz
Executive Director, Gulf Wild

Subject: Amendment 28

Dear Gulf Council Members:

11 August 2015

I would like to speak for a sector that I believe is grossly underrepresented at council meetings: the American public. A little research will reveal that approx. 96% of all Americans, and 88% of Floridians, do not saltwater fish and have no advocate.

A comment concerning amendment 28 caught my attention. The individual indicated he was involved with a supermarket chain with 86 stores in the northeast, and stated that red snapper was one of the most popular species. I live in Pensacola and can attest to the fact that Joe Patty's Seafood is open seven days a week to serve the public. Maria's Fresh Seafood Market encourages me to go red snapper fishing as often as possible to help resupply their retail counter. Maria's sells to both the public and over 60 restaurants.

In my mind, it comes down to "who owns the fish?" If we believe the American public does, then you must ensure all Americans are getting both access and their *fair share*. One of the first publications I read concerning Fisheries Management was 'Understanding Fisheries Management: A Manual for Understanding the Federal Fisheries Management Process, Including Analysis of the 1996 Sustainable Fisheries Act.' The publication was developed by the Mississippi-Alabama Sea Grant Consortium. In the introduction, the question was asked: Who own the fish? The answer: You do, along with 330,000,000 other Americans.

The present allocation of gulf red snapper allocates 49% to recreational fishermen and 51% to the non-fishing public. Maybe an alternative to amendment 28 should be: recommending a greater share to the non-fishing public.

Gulf of Mexico wholesale fish markets, retail markets, and restaurants sell all the fresh, local-caught red snapper they can get to both locals and visitors. Please consider "who owns the fish" and support alternative 1 to amendment 28.

Thanks,

Larry Huntley, Pensacola

Subject: Oppose the Red Snapper Reallocation Scheme (Amendment 28)
Date: Monday, August 10, 2015 7:06:20 PM Eastern Daylight Time
From: Lyn Leeuw

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. Mark Murphy

To: Gulf Council

August 9, 2015

Kevin Anson, Chair
Gulf of Mexico Fishery Management Council
2203 North Lois Avenue, Suite 1100
Tampa, FL 33607

Dear Mr. Anson and Council Members.

I am Russell Underwood, a commercial Red Snapper and Reef fish fisherman who has commercially fished for 35 years. In my early years I ran party boats for Capt. Anderson's Marina for 10 years. I have also been involved for the last 30 years with the management and Council process. I have sat on numerous advisory panels and helped develop The Snapper IFQ Program. I own and help manage 8 reef fish vessels. I have thoroughly enjoyed both recreational and commercial fishing, but the most important thing to me is to protect the snapper and reef fish populations.

After 7 years of IFQ'S this program is working very well for the fisherman and the resource. In all we have a recovery date of 2032 on red snapper and I would like to continue to protect the resource too it's optimum yield.

I feel like amendment 28 threatens our recovery date and our commercial quota. My opinion is reallocation does not have anything concerning conservation of this fishery. I quote Roy Crabtree time after time saying we have to get the recreational fisherman under their required allotment. The commercial industry has become accountable and we are working hard to be 100 percent accountable! The commercial, headboats and charter boats are working hard to make this a better fishery. Through the Council process you have given two of these recreational sectors a way to build their businesses and extend their seasons under their quota. The smaller recreational boats (CCA) have not come up with any kind of plan to manage or make themselves accountable. Certain individuals have fought the council process concerning (tags, days at sea, true amount of vessels participating,). I feel like there are a lot of management tools floating around to be explored. Look what's happened with recreational catches, Florida and Alabama have a more directed effort than the other 3 Gulf States. The Red Snapper stock has always been more plentiful in the western gulf. My major concern is extreme pressure to this sector in the eastern gulf where the majority of the overages occur. Reallocating even a small amount of fish will not help the seasons or the resource.

I have read over amendment 28 and I have found dozens of reasons that your own scientific committees have recommended against reallocation . Fishermen including myself have not been educated or informed on words like these new words (SELECTIVITY) and (RECALIBRATION). I have approached a few council staff and was informed that it was just a bunch of bull.....

In the future reallocation threatens the charter boat and headboats industry because a lot of these vessels have become dual permitted vessels. Reallocation threatens the grouper fishery in the eastern gulf as they lease fish for their by catch issues. In general snapper fishermen and grouper fishermen have become neighbors and business partners in leasing snapper and grouper amongst each other. We as fishermen have worked hard to rebuild this fishery and we have been told that we would be rewarded for our good stewardship. The Council has played a major part of this recovery and should be praised for their part in the red snapper recovery plan.

The American consumer has the right to consume and enjoy fresh red snapper from the Gulf. Thousands of restaurants have become dependent on this resource as have fish markets and grocery stores. Fish

houses have worked with the restaurants to have red snapper year round and developed dependable market supply. 97 per cent of the people in the United States do not fish or have resources to catch a Red Snapper. Restaurants In Panama City have become very dependent on red snapper my vessels have caught, such as "The Captains Table, Captain Anderson's, And BoonDock 's" and numerous restaurants up and down the Gulf Coast.

I am respectfully asking Council to remove amendment 28 and open up new avenues to help small recreational fisherman. Please take in account that we have had one of the worse oil spills in the Gulf just a few years ago and worse recruitment in the last 3 or 4 years. Be cautious on this resource that we have worked so hard to rebuild. Looking forward to seeing all of you at Council. May God give you all the strength and knowledge to make the best decision concerning the resource and our livelihoods.

Sincerely,
Russell Underwood

Subject: Oppose the Red Snapper Reallocation Scheme (Amendment 28)

Date: Monday, August 10, 2015 1:05:06 PM Eastern Daylight Time

From: Joanne Manel

To: Gulf Council

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Re: *Reef Fish Amendment 28 – Allocation*

Dear Gulf Council Members,

Thank you for the opportunity to express our concerns regarding the proposal for Amendment 28, which reallocates fishing quota from commercial to recreational sectors. The Cape Cod Commercial Fishermen's Alliance is the leading voice for commercial fishermen and fishing families on Cape Cod, and as such, we understand the need to protect shared natural resources to ensure public access now and into the future.

In the Gulf of Mexico, the recreational sector has demonstrated an inability to stay within its catch limits; they exceeded their quota in 21 out of 23 years from 1998 to 2013. Amendment 28 proposes to reallocate quota from the commercial fleet to the recreational fleet to address this issue. This a very dangerous approach to a problem that will not solve overharvest; quota reallocation is not a substitute for better management and accountability.

- In commercial fishery landings, every fish is accounted for, while the rate, origin and occurrence of recreational harvest is often very difficult to trace
- It would unfairly penalize commercial fishermen who responsibly adhere to annual quota allocations
- The amendment will not give recreational fishermen longer fishing seasons over time, and it will NOT prevent recreational overharvest
- Quota reallocation in the Gulf Council would set a very real and dangerous precedent for other regions, which would result in negative impacts to fishing businesses across the United States
- Rather than reallocating fish away from the commercial sector, a better approach for an amendment would be to develop meaningful accountability measures for the recreational sector

Amendment 28 will only serve to exacerbate the animosity between the two sectors. Commercial fishermen adhere to management and accountability measures that are in the best interest of their fishery; they deserve to retain access to the fisheries they depend on. I urge you to maintain status quo by selecting Alternative 1 when voting on this amendment.

Thank you for your time and consideration of our concerns.

Sincerely,

John Pappalardo

Mr. Kevin Anson, Chair
Gulf of Mexico Fishery Management Council
2203 North Lois Ave.
Tampa, FL 33607

Dear Mr. Anson:

Thank you for the opportunity to comment on Gulf of Mexico fisheries. We recommend that the Gulf Council move past the false promise of reallocation by choosing “No Action” as the preferred alternative in Amendment 28, and instead clear the way for meaningful recreational red snapper and reef fish management reform. The Council can do this by continuing the progress being made with Reef Fish Amendments 41 and 42, developing successful allocation-based management models for the Gulf’s charter and headboat industries, and by tailoring Amendment 39 to meet the needs of private anglers.

Here are our recommendations:

1. Choose “No Action” as the preferred alternative in Amendment 28.

The recent addition of Alternatives 8 and 9 to Amendment 28 and the revision of its purpose and need suggest that the Council is determined to pursue reallocation to the recreational sector and is searching for justification. The Council has appropriately dismissed its prior emphasis on net benefits. Yet despite completely re-writing the proposed amendment’s purpose and need as a result of that change, the Council has nevertheless retained all of the same management alternatives. The Council has now added two new reallocation alternatives that would also reallocate more quota to the recreational sector on the basis of recent MRIP recreational landings calibration and stock projections, but both of these alternatives are flawed and should be rejected.

The Council should choose “No Action” in Amendment 28 for these reasons:

- The rationale offered for Alternatives 8 and 9 is not credible.
- Reallocating red snapper quota is projected to cause a further decline in the spawning potential ratio in the eastern Gulf and may contribute to localized depletion in that region.

- Reallocating red snapper quota will not bring stability to the recreational fishing season or reduce the likelihood of recreational overages, but it will undermine the successful IFQ program in the commercial sector.
- Reallocating red snapper quota will not increase economic benefits of red snapper fishing.

The rationale provided for Alternatives 8 and 9 is not credible.

Reject Alternative 8: The current preliminary MRIP calibration method suggests that recreational red snapper harvest in recent years is greater than what previously was estimated using the MRFSS methodology. We agree that MRIP presents the best available scientific information on recreational catch accounting at this time. That rebuilding has progressed since 2007 in spite of recreational overages that were larger than previously estimated suggests that the red snapper stock could have sustained higher ABC levels in recent years. This means the commercial/recreational sectors could have been allocated 51%/49% of higher catch limits. In contrast, to reallocate on the basis of recently revised recreational landings as estimated by MRIP showing even larger overages would be inconsistent with the Magnuson-Stevens Act's requirement that allocations ensure that quotas "do not reflect any harvests in excess of such allocations."¹

It is not clear whether the Council is attempting to justify Alternatives 8 and 9 on the basis of the impact of recent recreational overharvests on stock projections – which Alternatives 8 and 9 would shift entirely to the recreational sector – or on the basis of landings trends taken into account when initial allocations were established in 1990.² For example, the Amendment 28 DEIS analysis explains Alternatives 8 and 9 on the basis of the three most recent years of recreational landings and size selectivity, whereas Council discussion has emphasized the implications of calibration on historical landings.³

Some have suggested that the difference in recreational red snapper landings estimated by MRFSS vs. MRIP methodology in recent years is consistent with long-term trends and may reflect the state of the fishery when commercial and recreational allocations were established. However, given the changes in management institutions, demographics, and data collection since that time, the usefulness of the calibration estimates decreases considerably for any comparison beyond very recent years. Research from NOAA Fisheries scientists supports this. Thunberg & Fulcher 2005 find marine recreational fishing participation rates are not stable over time, and therefore recreational fishing participation is

¹ Magnuson-Stevens Act, 16 U.S.C. § 1883(d)(2).

² GMFMC (2015). Red Snapper Allocation. *op. cit.* p 11.

³ See comments from NOAA Fisheries Southeast Regional Administrator Dr. Roy Crabtree: "Our allocations are mostly all based on our perception of what the historic mix in the fishery is and one of the problems with red snapper, and a number of other species, is those allocations were put in place in Amendment 1, way back in 1990, and they're based on a landings back from I think 1970 to 1986 and that's a problem for us now, because it's hard to correct all those landings that far back... somewhere we need to find a better basis for deciding what the optimal allocation is other than what we think it looked like forty years ago, because I don't think anybody is really going to be happy with that kind of thing." Gulf of Mexico Fishery Management Council (2015). Meeting of the Gulf of Mexico Fishery Management Council, 251st Meeting, Full Council Session. January 28-29, 2015.

unpredictable: “Even subtle changes in participation probabilities among demographic cohorts can lead to an unreliable understanding of the composition of the fishing public.”⁴ This suggests that recent changes in estimated recreational fishing effort and landings are unrelated to recreational fishing trends in the past.

The MRIP calibration approach incorporated in the Amendment 28 DEIS does not recognize these limitations. Instead, “it is based on an assumption that the ratio of catch in the peak period to total catch is stable over time.”⁵ This means the relative distribution of catch throughout a day is assumed to be constant for all years and identical to that distribution estimated for the year 2013. Using this untenable assumption, NOAA Fisheries has extended red snapper calibrations back at least to 1981 on the basis of the distribution of trips throughout a day in the year 2013 alone.⁶ This calibration has changed stock projections, and the Council now is using these stock projections to justify reallocation in Alternatives 8 and 9.

The MRIP calibration workshop report states about the calibration approach being used: “We are not sure if this is defensible from a scientific point of view.”⁷ It is alarming that NOAA Fisheries and the Council propose moving forward with a significant and potentially destabilizing institutional change such as reallocation from the successful red snapper IFQ program on the basis of this interim calibration approach that apparently is not scientifically defensible, is subject to “substantial criticisms,”⁸ and is likely to be revised numerous times in the near future.

Reject Alternative 9: Fishery allocations should not be changed on the basis of recent changes in selectivity. According to a recent SSC report, “there is some evidence that recreational fishing selectivity in recent years has been shifting toward larger and older red snapper.”⁹ This shift in selectivity reflects a change in angler behavior, and “this behavior could change in response to changing allocations.”¹⁰ There is no way of knowing if reallocation might cause recreational selectivity to stay constant, shift even higher, or shift toward smaller fish. These changes could have dramatic impacts on stock projections and allocations. To establish a precedent where allocations fluctuate with preliminary selectivity data would increase management uncertainty and could incentivize high-grading and increased discarding.

With such a precedent established, it would be impossible for future allocation changes to respond to selectivity shifts in a timely way. Future changes in selectivity would take a number of years to be detected through the scientific process and altered through the management process. Moreover, the

¹⁰ GMFMC (2015). Red Snapper Allocation. *op. cit.* p.75.

Amendment 28 DEIS analysis is internally inconsistent about how future allocations will be determined. The analysis states: “Percentages of the red snapper quota allocated to each sector would also not be fixed under Preferred Alternative 8 and Alternative 9 but would vary based on the quota and on the amounts attributed to the recalibration and to the change in size selectivity in the recreational sector.”¹¹ Elsewhere in the document, also with respect to Alternatives 8 and 9, the analysis states: “Resulting percentages allocated to each sector will remain until changed by the Council.”¹² Apparently, NOAA Fisheries and the Gulf Council have no clear plan for how future allocations would be established on the basis of Alternatives 8 and 9.

Reallocating red snapper quota is projected to cause a further decline in the spawning potential ratio in the eastern Gulf and may contribute to localized depletion in that region.

We caution the Council to consider the impact of red snapper reallocation on the eastern Gulf of Mexico red snapper stock. In recent years, increasing catch limits have been sustained by rebuilding progress in the western Gulf of Mexico, as measured by the spawning potential ratio (SPR). According to the recent SSC report, “SPR in the western Gulf continues to increase, but the SPR in the eastern Gulf declines, and the decline is exacerbated by increasing allocation to the recreational sector.”¹³ Every reallocation alternative proposed for Amendment 28 contributes to further SPR decline in the Eastern Gulf of Mexico.¹⁴ The size of the projected decline increases with the size of proposed reallocation. This is because most recreational fishing occurs in the eastern Gulf of Mexico. Increasing fishing effort in the eastern Gulf – where red snapper SPR is only 11% and has been in decline – while relying on continued western Gulf SPR increases to sustain overall rebuilding progress could contribute to localized depletion and does not appear “reasonably calculated to promote conservation.”¹⁵

Reallocating red snapper quota will not bring stability to the recreational fishing season or reduce the likelihood of recreational overages, but it will undermine the successful IFQ program in the commercial sector.

The Amendment 28 DEIS analysis states: “Alternatives 2-9 will not increase the stability of red snapper fishing for the recreational sector...”¹⁶ Season length projections are not included, but “the season is extended only nominally”¹⁷ and it is reasonable to conclude the increase in red snapper private angler and for-hire EEZ seasons would be a fraction of a day or a day or two at the most. On the other hand, the analysis claims reallocation would destabilize the commercial red snapper fishery that is thriving

¹¹ *Ibid.*, p. 82.

¹⁶ GMFMC (2015). Red Snapper Allocation. *op. cit.*, p.78

¹⁷ *Ibid.*, p.76.

with individual fishing quota (IFQ) management: “A reallocation from the commercial quota would be expected to negatively affect the stability of the commercial sector in terms of long term access to red snapper allocation and confidence in the IFQ program.”¹⁸ The Council should not undertake an action that will destabilize one sector for marginal (if any) benefit to another sector. We strongly caution the Council to consider the destabilizing impact of red snapper reallocation on the commercial fishery, including the fishermen, suppliers, processors, markets, and consumers that depend on it.

The DEIS analysis also states “...quota overages and shortened seasons would be expected to continue in the recreational sector.”¹⁹ In 2014 recreational red snapper harvest remained under its annual catch target. In part this is due to a new 20% management uncertainty buffer, but this does not address our concerns with Amendment 28. First, one season of successful quota compliance does not make a trend. With status quo recreational management and inconsistent state waters regulations seemingly unchecked (approximately half of the 2014 red snapper annual catch target was harvested in state waters under inconsistent state regulations),²⁰ there is no reason to expect the trend of recreational overharvests not to continue. Second, reallocating would undermine the conservation impact that a buffer is intended to accomplish.

Without a fundamental change in management that incentivizes accountability instead of punishing anglers and for-hire businesses with short seasons whenever the Council and NOAA Fisheries fail to constrain recreational catch to quota, recreational quotas will continue to be subject to a large management uncertainty buffer, fishing seasons will remain short, and anglers and for-hire businesses will continue to be dissatisfied with management. Reallocation will not address these problems, as the Amendment 28 DEIS itself makes clear.²¹

Reallocating red snapper quota will not increase economic benefits of red snapper fishing.

The Council’s Socioeconomic SSC (SESSC) has advised that a new management approach for recreational fishing should be a higher priority than any consideration of reallocating quota from the commercial to recreational sector.²² We have provided detailed comments on the weak policy relevance of Amendment 28 economic efficiency analysis in several previous letters to the Gulf Council and NOAA Fisheries, and we incorporate those comments here by reference.

2. Develop meaningful management reform for Gulf of Mexico reef fish recreational fisheries.

The recent implementation of Amendment 40 is an important step toward developing management models that suit the different needs of for-hire fishing businesses and private anglers. With recreational

¹⁸ *Ibid.*, p.79.

¹⁹ *Ibid.*, p.79.

²⁰ *Ibid.*, p.81

²¹ *Ibid.*, p. 76.

²² Gulf of Mexico Fishery Management Council (2014). Socioeconomic SSC Meeting Summary. August 5, 2014.

red snapper management now moving in the right direction, the Council can build on this first step by developing effective management tools for the recreational reef fish quota and its sub-sectors. This would offer far greater improvements to fishing seasons and conservation than any reallocation.

First, we recommend that accountability measures such as uncertainty buffers and overage payback adjustments be sector-specific and tailored to management performance. That is, for-hire and private angling sub-sectors should have unique accountability measures reflecting differences in management uncertainty between the two groups.

We have recommended new management models for the Gulf's for-hire and private angler recreational sub-sectors in several previous letters to the Council. These tools could include individual fishing quotas (IFQs) or cooperatives in the for-hire sectors and harvest tags and angler management organizations (AMOs) in the private angler sector. The Council also has clear guidance from recent meetings of its ad hoc charter for-hire and headboat advisory panels.^{23,24} We encourage the Council to build on these recommendations as it develops Reef Fish Amendments 41 and 42 and reconvene these advisory panels for additional industry recommendations. Specifically we recommend that the Council:

- Develop allocation-based management models for the charter and headboat components of the for-hire sector in Amendments 41 and 42.
- Dedicate regional management in Amendment 39 to the private angling component by selecting Alternative 2 in Action 2 as preferred, and improve the plan by allowing states the flexibility to manage using tools like tags and AMOs.

Develop allocation-based management plans for the charter and headboat components of the for-hire sector in Amendments 41 and 42.

The Gulf Headboat Collaborative (GHC) pilot program has demonstrated that an allocation-based management plan for headboats can be successful. According to recent reports to the Gulf Council, allocated the same proportion of red snapper and gag their customers would normally catch in derby seasons, headboats participating in the GHC pilot program have:^{25,26}

- Dramatically spread out their allocations of red snapper and gag over the year to increase the number of fishing days
- Provided many more anglers with opportunities to fish for red snapper and gag
- Significantly reduced discards of red snapper and gag (by 43% and 59%, respectively)

²³ Gulf of Mexico Fishery Management Council (2015). Ad Hoc Red Snapper Charter For-Hire Advisory Panel Summary. May 13, 2015.

²⁴ Gulf of Mexico Fishery Management Council (2015). Summary for the Ad Hoc Headboat Reef Fish Advisory Panel. May 19, 2015.

²⁵ Abbott, J.K. (2015). The Gulf Headboat Collaborative: Preliminary Findings from Year 1. Presentation to the Gulf of Mexico Fishery Management Council. Biloxi, MS. March 31, 2015.

²⁶ NMFS Southeast Regional Office (2015). "Headboat Collaborative Pilot Program 2014 Annual Report." March 2015.

- Successfully stayed under catch limits and facilitated superior monitoring and enforcement by using daily electronic logbooks, vessel monitoring systems, and quota transferability within the pilot program

The pilot program is working well, and a similar management approach should be extended to all Gulf of Mexico headboats participating in the reef fish fishery. The same benefits should also be extended to charter component of the recreational reef fish fishery. We recommend the Council encourage the two groups to move in the same direction but on distinct tracks via Amendments 41 and 42, which is consistent with advice from both its ad hoc charter for-hire and headboat advisory panels.

Dedicate regional management in Amendment 39 to the private angling component by selecting Alternative 2 in Action 2 as preferred, and improve the plan by allowing states the flexibility to manage using tools like tags and AMOs.

We recommend that private angler recreational red snapper quota be managed under state authority delegated by the existing Council process. States can establish angler management organizations (AMOs) or manage allocations using harvest tags allocated by lottery, auction, or other systems. Using these tools, states can cater to differences among their coastal communities, provide year-round fishing opportunities, and effectively monitor fishery performance. Improved performance relative to conservation goals would lead to reduced uncertainty buffers and therefore higher catch targets and longer fishing seasons. We ask that the Council refine Amendment 39 so that it can provide these benefits for anglers while granting for-hire operators the opportunity to continue pursuing allocation-based management through Reef Fish Amendments 41 and 42. The Ad Hoc Private Angler Advisory Panel created by the Council at the June 2015 meeting would be an ideal body to consider management approaches that could reduce uncertainty and provide more flexibility for anglers.

Thank you for considering our comments and recommendations.

Sincerely,

A handwritten signature in black ink, appearing to read "Robert E. Jones". The signature is stylized and cursive.

Robert E. Jones

GULF FISHERMEN'S ASSOCIATION
The largest organization of offshore fishermen in the Southeastern US

August 9, 2015

Chairman Kevin Anson
Gulf of Mexico Fishery Management Council
2203 North Lois Ave, Suite 1100
Tampa, FL 33607

Dear Chairman Anson,

The Gulf Fishermen's Association (GFA) supports Alternative 1 (Status Quo) in Reef Fish Amendment 28 for the following reasons:

1. Reallocation is Not Fair or Equitable.

a. Reallocation unfairly penalizes commercial fishermen when it was their sacrifices that have driven the rebuilding of the red snapper stock despite chronic recreational sector overharvesting.

- i. When quotas were cut to rebuild the red snapper stock, the commercial sector's landings dropped from 4.6 million pounds to 2.5 million pounds while the while the recreational sector's landings exceeded its quota.¹
- ii. The emergency increase in quota in 2011 was all given to the recreational sector; yet due to recreational overharvesting in 2012, the 2013 quota was reduced and the commercial sector lost access to 51% of that reduction.²
- iii. In the *Guindon v. Pritzker* case, the court agreed that the National Marine Fisheries Service (NMFS) *de facto* reallocated to the recreational sector when it failed to hold the recreational sector to its quota. This is a violation of Section 407(d), National Standard 4, and the fishery management plan's requirements.³ Recalibration of recreational landings data only shows that this illegal *de facto* reallocation was even more egregious than anyone previously thought.
- iv. There is no "fair and equitable" basis for allocating the recalibration increases to the recreational sector (Alternative 8 and 9) because the recreational sector was never harmed by the error that recalibration supposedly corrects.
- v. Amendment 28 is founded upon the baseless assumption that the only "fair and equitable" allocation is one that shifts more quota to the recreational sector.
- vi. Recalibration demonstrates that the red snapper allowable biological catch (ABC) should have been higher, not that the 51%/49% commercial/recreational allocation formula should be changed - commercial fishermen should have had

¹ Amendment 28 (August 2015) at p. 31 (Table 2.1.2).

² See 77 Fed. Reg. 64960, 64961 (Oct. 24, 2012); 78 Fed. Reg. 32179, 32181 (May 29, 2013)

³ See *Guindon v. Pritzker*, 31 F. Supp. 3d. 169, 193, 201 (2014) ("At a certain point NMFS was obligated to acknowledge that its strategy of incrementally shortening the [recreational] season was not working. Administrative discretion is not a license to engage in Einstein's definition of folly—doing the same thing over and over again and expecting a different result.... NMFS essentially guaranteed that the actual catch allocation would skew widely from the 51/49 allocation, as indeed it did. This violated MSA Section 304(b).... When an agency blinds itself to the high likelihood that its actions will cause overharvesting, the Court cannot characterize those actions as 'reasonably calculated to promote conservation.'" (quoting National Standard 4)).

access to 51% of a higher ABC, not that their proportion of the total catch should now be reduced.

b. Reallocation will unfairly harm the commercial sector without providing any benefit to the recreational sector.

- i. Amendment 28 acknowledges that reallocation will harm the commercial sector, but will provide no benefit to the recreational sector because it does nothing to solve that sector's problems.⁴
- ii. Amendment 28 makes clear that shortened recreational fishing seasons in federal waters are primarily caused by Gulf states, which deliberately⁵ set fishing seasons in their state waters to conflict with federal regulations.
- iii. We disagree that the recreational sector has suffered a "loss in fishing opportunities."⁶ The very problem is that the recreational sector has had *too many fishing opportunities relative to the health of the red snapper population*, as seen by the fact that it has landed several millions of pounds of fish more than it was supposed to.

c. Reallocation unfairly penalizes seafood consumers across the country to reward a small segment of recreational anglers.

- i. Over 80% of Americans access their red snapper as seafood consumers, not by catching it themselves.⁷ Taking access to this fishery from 80% of the public and giving it to 10% is not fair or equitable. The same two red snapper that provide one private angler's access can provide access for 18 (or more) seafood consumers. Taking access from 18 (or more) consumers and giving it to 1 recreational angler is not fair or equitable.

d. Reallocation is unfair for a number of other reasons.

- i. The "purpose and need" of Amendment 28 has fundamentally changed, but the action alternatives that were developed under the old "purpose and need" (which was based on a now-discredited economic theory) haven't been updated to meet the new "purpose and need."
- ii. Most allocations in the Gulf already favor recreational anglers. *Recreational allocations exceed commercial allocations in eight of 11 (73%)⁸ important Gulf fisheries*, including two with zero allocation to commercial fishermen.⁹ Recreational fishermen land 79% of these species while commercial fishermen land 21%.

⁶ Amendment 28 (June 2014) at p. 30.

⁷ 60 million US anglers in a population of 317.3 million, in 2013; <http://asafishing.org/newsroom/news-releases/new-report-highlights-recreational-fishings-broad-economic-and-conservation/>; <http://www.census.gov/popclock/>.

⁸ Share the Gulf, personal communication, August 5, 2015.

⁹ No federal fishery; limited commercial harvest in state waters for grandfathered permits.

- iii. Reallocation sets a dangerous precedent where any fishery, commercial or otherwise, could be destabilized under the guise of recalibrating historical landings estimates.¹⁰
 - iv. The public doesn't want reallocation. Of the 54 scoping comments that were received by NMFS during the Notice of Intent to Prepare an EIS (11/7/2013-12/9/2013), 54% (29) supported Alternative 1 (Status Quo).¹¹ In fact, we think that there has been unanimous public testimony from commercial fishermen and nearly-unanimous public testimony from charter industry opposing reallocation. Also, it's our understanding that over *12,500 public comments* have been submitted to the Gulf Council, Gulf state Governors, and Congress that oppose reallocation.¹²
2. Reallocation does not promote conservation.
- a. **Reallocation could exacerbate the problem of recreational overharvesting.**
 - i. Amendment 28 clearly acknowledges that "it is not clear that the proposed reallocation alternatives would promote conservation, in light of the repeated and sizeable harvest overages recorded for the recreational sector"¹³ and therefore Amendment 28 violates National Standard 4. *The recreational sector has gone over its allocation in 21 of the 23 years (91%) between 1991 and 2013 by almost 43 million pounds.¹⁴ Between 2007 and 2013, the recreational sector has exceeded its quota in every year but one, and by an average of about 50% per year.¹⁵ In 2013, the recreational sector caught more 208% of its quota.¹⁶*
 - b. **Reallocation is projected to force the stock of red snapper in the eastern Gulf into a permanently and severely overfished position.**
 - i. According to the Science and Statistical Committee (SSC), the spawning potential ratio (SPR) "in the western Gulf continues to increase, but the SPR in the eastern Gulf declines, and the decline is exacerbated by increasing allocation to the recreational sector."¹⁷ Under the reallocation alternatives in Amendment 28, spawning stock biomass (SSB) in the eastern Gulf declines to just four to six percent of an unfished condition.¹⁸
 - ii. The SSC unanimously concluded that "if the Council changes the allocation between the two sectors, this would prompt the need to reevaluate the OFL [overfishing limit] and ABC projections."¹⁹
 - c. **The impacts of reallocation are based upon several bold assumptions that are conclusory and contradicted by record evidence and which, if indeed are wrong, could mean that the rebuilding schedule will be jeopardized by reallocation.**
 - i. Reallocation is based on the assumption that recreational discard mortality is only 10%.²⁰ *This assumption is outdated, no longer valid, and must be re-evaluated* because it assumes use of a venting tool (which is no longer required "due to questions of its efficacy,"²¹) and it fails to acknowledge that faster and more seaworthy recreational fishing vessels using sophisticated navigational

and fish-finding electronics, recreational anglers may also be fishing in deeper water than previously estimated²² (which could be one possible explanation for the late-day landings observed in the revised Marine Recreational Information Program (MRIP) sampling methodology), which could increase discard mortality rates due to barotrauma.²³ Rebuilding the snapper resource should encourage a general change towards targeting larger, older fish in deeper water. That would be positive for resource conservation, leading to higher long-term optimum yields – *if its benefits are not offset by an increase in dead discards*.²⁴

- ii. There is no documentation or support in Amendment 28 that confirms “Selectivity,” or the assumption that anglers are targeting larger fish. To the contrary, several scientists have indicated that, rather than a shift in targeting behavior, selectivity is more likely a function of anglers encountering the larger fish of strong year classes moving through the fishery, combined with recent poor recruitment in the eastern Gulf.²⁵ In other words, anglers are catching larger fish not because they are targeting them, but because those fish are relatively more available.
 - iii. Recreational fishermen may be targeting larger red snapper because smaller red snapper just aren’t there, which is supported by the Southeast Data, Assessment, and Review (SEDAR) 31 analysis showing low recruitment in recent years.²⁶ These “recruitment gaps” are being covered up in the MRIP data due to selectivity. As they work their way through the fishery, we can expect the average size of red snapper to decline and along with it, the “selectivity” of the recreational fleet.
 - iv. Selectivity is a function of fishermen's behavior, which directly correlates to management decisions and biological implications. We can assess this looking backwards but can’t accurately predict it moving forward because of the changing conditions of the fishery. It just doesn't make sense to make permanent allocation changes based on something that will continue to shift.
3. Reallocation is not sufficiently supported by economic justification.
- a. **The existing reallocation alternatives come from a now-discredited economic theory.**
 - i. The “purpose and need” of Amendment 28 has fundamentally changed, but the action alternatives that were developed under the old “purpose and need” (which was based on a now-discredited economic theory) haven’t been updated to meet the new “purpose and need.” On August 5, 2014, the Gulf Council’s Socio-Economic SSC (SESSC) voted 6-1 to overwhelmingly approve a critique of the Agar and Carter economic analysis by Dr. Dennis King and Larry Buc. Subsequent papers, including those by Holzer and McConnell (2014) and Abbott (2015) now referenced in Amendment 28²⁷, showed that because the quota is not efficiently allocated across the recreational sector, it could not be shown that reallocation would produce net economic benefits.
 - b. **Reallocation imposes economic harm on the commercial sector.**

²⁶ See *Id.* at 9; see also Standing and Special Reef Fish SSC Report to the Gulf Council (May 20, 2015) at Fig. 8.

²⁷ Amendment 28 (June 2015) at p. 17, 107.

- i. Amendment 28 clearly states that any reallocation alternative “would be expected to result in economic losses to the commercial sector.”²⁸ Reallocation imposes direct and indirect financial costs and disruptions on the commercial sector and the seafood supply chain with direct economic losses to the shareholders and also to the captains, crew, shoreside infrastructure, wholesaler, retailer, and consumers of the red snapper harvested with that allocation. The commercial sector will also risk foregone revenue and the stranding investments that were made in vessels and shoreside infrastructure based upon the rebuilding red snapper stock and the prospect for constant or increased future catches.
 - ii. According to the MRIP recalibration, the recreational sector caught 18 million pounds of red snapper more than they were allowed in recent years.²⁹ Based on the current 51%/49% commercial/recreational split between commercial and recreational allocations, commercial fishermen should’ve had access to 51% of that allocation (9.2 million pounds), valued at over \$35 million dollars.³⁰
- 4. The analysis of the MRIP recalibration methodology is incomplete and not available for public review.
 - a. The MRIP recalibration analysis has been identified as a “preliminary, interim approach.”³¹ The authors of that approach stressed that their calculations assume that the ratio of peak-period to total catch has remained constant across time, which they acknowledged may not be “defensible from a scientific point of view.”³² That approach was apparently applied in the 2014 update assessment but it was only relevant to landings estimates for 2004–12. How the estimates for 1950–2003 were adjusted remains unknown.³³
 - b. That recommendation was based on the simplest of three approaches considered by the workshop, apparently for no better reason than that the other two were not fully developed, while the simple one would be easier to explain. Restating their concern multiple times throughout the report, the MRIP workshop participants offered the following conclusion: “We recommend that investigation continue on the remaining two methods. It is possible that one of them will be determined to be better at some future date.”³⁴ To our knowledge, this recommendation has not been followed and additional investigation has not formally continued on the two remaining methods. This should occur before recalibration can be formally considered for reallocation purposes.
 - c. Recalibration is a broad concept (retroactively accounting for unaccounted for mortality) but it’s only being used for a specific purpose in Amendment 28 and to benefit one user group by harming the other. Recalibration should be considered in the broader fishery context, including but not limited to unreported red snapper bycatch in the shrimp fishery, unreported commercial landings of red snapper, unaccounted mortality due to the Deepwater Horizon disaster and other oil spills, unaccounted mortality associated with the removal of oil rigs, and so on. If recalibration is a tool that managers choose to use, it should be used in a comprehensive and fair manner to more accurately account for missing mortality fishery-wide.
 - d. Alternatives 8 and 9 in Amendment 28 are based upon the results of the 2014 update stock assessment. However, it does not appear that any written report of that assessment is publicly available, nor does it appear that it has undergone any peer

review. Nothing more than a PowerPoint presentation was available when the work was reviewed by the Gulf Council's SSC early in January 2015 and nothing more formal has been found on the SEDAR, SEFSC or Gulf Council websites. Therefore, although it was accepted by the SSC for the biennial setting of allowable catches, the update assessment cannot be said to have been subjected to meaningful peer review.

5. Alternatives 8 and 9 Violate MSA Section 407(d)(2).

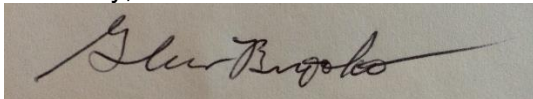

- a. Finally, we believe the new Alternatives in Amendment 28 do not promote conservation because they could violate Section 407(d)(2) of the Magnuson-Stevens Fishery Conservation and Management Act (MSA). The implicit premise underlying Amendment 28, including the stated purpose of Alternatives 8 and 9, is to increase the recreational quota to reflect its prior harvests in excess of the recreational allocation. The MSA prohibits this - Section 407(d)(2) requires the Council to ensure that red snapper "quotas reflect allocations among such [commercial and recreational] sectors and do not reflect any harvests in excess of such allocations."³⁵ Alternatives 8 and 9 would shift the entire increase in the annual catch limit (ACL) attributable to MRIP recalibration to the recreational sector.

In conclusion, GFA believes that the rationale for supporting Alternative 1 (Status Quo) is now overwhelming. Reallocation harms commercial fishermen, their businesses, the seafood supply chain, the American seafood consumer, and red snapper themselves. Reallocation is not the solution to shortening recreational red snapper seasons in federal waters and unfairly penalizes the commercial sector for adhering to its quota every year since the IFQ program started in 2007. Commercial fishermen, charter fishermen, and seafood supply chain turn out to every Council meeting and show their overwhelming support for Alternative 1. Reallocation may not be legal under federal fishery law. And the MRIP recalibration methodology and the concept of "selectivity" should not be used to make reallocation decisions since they are incomplete, inappropriate, and not available in their entirety for public and peer review.

It's for these and other reasons that we urge you to support the only viable alternative in Amendment 28 – Alternative 1 (Status Quo).

Thank you for considering our position.

Sincerely,

Glen Brooks, President
Gulf Fishermen's Association

Gulf of Mexico Reef Fish Shareholders' Alliance

Comments supporting Alternative 1 (Status Quo)

in Reef Fish Amendment 28

Gulf of Mexico Fishery Management Council
August 10-14, 2015 (New Orleans, LA)

Executive Summary

- Reallocation of red snapper from the commercial sector to the recreational sector isn't justified when evaluated against biological, social, and economic criteria. Reallocation is not fair or equitable, does not promote conservation, lacks sufficient economic and biological analysis, and relies on conclusory assumptions and incomplete methodologies that are not available for public or peer review.
- Reallocation will do nothing to solve the problem of declining fishing season lengths in the federal recreational red snapper fishery, but will cause substantial harm to the commercial fishing sector.
- Amendment 28 violates a number of National Standards and other provisions of the Magnuson-Stevens Fishery Conservation and Management Act.
- Substantial public input demonstrates a strong desire for Alternative 1 (Status Quo).
- Due to the overwhelming evidence before you, the only viable Amendment 28 alternative for the Gulf of Mexico Fishery Management Council to approve is Alternative 1 (Status Quo).

Introduction

The Gulf of Mexico Fishery Management Council (Gulf Council) is considering whether or not to reallocate red snapper from the commercial sector to the recreational sector. This reallocation amendment (Amendment 28) to the Reef Fish Fishery Management Plan (FMP) is scheduled for Final Action at the August meeting of the Gulf Council on Thursday, August 13, 2015 at the Hilton Riverside in New Orleans, Louisiana.

The Gulf of Mexico Reef Fish Shareholders' Alliance (Shareholders' Alliance) submits these comments on Amendment 28. The Shareholders' Alliance is a non-profit organization that represents the interests of commercial reef fish fishermen and other stakeholders in the Gulf of Mexico. We work hard to maintain accountability and conservation-based management for our region's fisheries for today and future generations. By working closely with regional managers, state agencies, and federal representatives, we strive to stabilize and improve fishery management to ensure that we can continue to provide the American public with a sustainable source of domestically-caught Gulf of Mexico seafood. Everything we do is founded in our belief that conservation and stewardship protect fish populations *and* fishermen's businesses.

The Shareholders' Alliance has consistently advocated for the approval of Alternative 1 (Status Quo) in Amendment 28 for a lengthy list of reasons that are supported by biological, social, and economic data; as well as by process and procedure. The following letter and appendices restates our historical concerns for the record and provides additional support for our position against

reallocation. We encourage you to read this document and, when the time comes, cast your vote for the only viable and legitimate alternative in Amendment 28 – Alternative 1 (Status Quo).

I. Reallocation is Not Fair or Equitable.

A. Reallocation unfairly penalizes commercial fishermen when they sacrifice that have driven rebuilding of the red snapper stock despite chronic recreational sector overharvesting.

Section 303(a)(14) of the Magnuson-Stevens Fishery Conservation and Management Act (MSA) requires that:

to the extent that rebuilding plans or other conservation and management measures which reduce the overall harvest in a fishery are necessary, [any FMP shall] allocate, taking into consideration the economic impact of the harvest restrictions or recovery benefits on the fishery participants in each sector, any harvest restrictions or recovery benefits fairly and equitably among the commercial, recreational, and charter fishing sectors in the fishery.

Amendment 28 to the Gulf of Mexico Reef Fish Fishery Management Plan (FMP) (Amendment 28) insufficiently analyzes the “economic impact of the harvest restrictions” necessary to rebuild the red snapper stock on the fishery participants in each sector. If that analysis was conducted, it would show that participants in the commercial sector bore almost the entire the brunt of the economic impacts of the harvest restrictions necessary to rebuild the stock.

For example, between 2006 and 2009, when the annual quota was substantially reduced in response to a court decision striking down the prior rebuilding plan as incompatible with MSA requirements,¹ the commercial sector’s landings steadily dropped from 4.649 million pounds (in 2006) to 2.484 million pounds (in 2008 and 2009).² By contrast, the recreational sector did not reduce its landings at all but instead drastically exceeded its quota during this period, landing 4.131 million pounds in 2006, 5.809 million pounds in 2007, 4.506 million pounds in 2008 and 5.597 million pounds in 2009.³

In short, the catch reductions required by the new rebuilding program had no impact on the recreational sector, because it failed to comply with those reductions. Thus, during these critical years of the rebuilding plan, when the spawning stock actually started showing signs of rebuilding,⁴ it was the commercial sector alone that paid the price for rebuilding. See Figure 1 below.

¹ See *Coastal Conserv. Ass’n v. Gutierrez*, 512 F. Supp. 2d 896 (S.D. Tex. 2007).

² Amendment 28 (August 2015) at p. 31 (Table 2.1.2).

³ *Id.*

⁴ Amendment 28 (August 2015) at p. 289 (Figure 3).

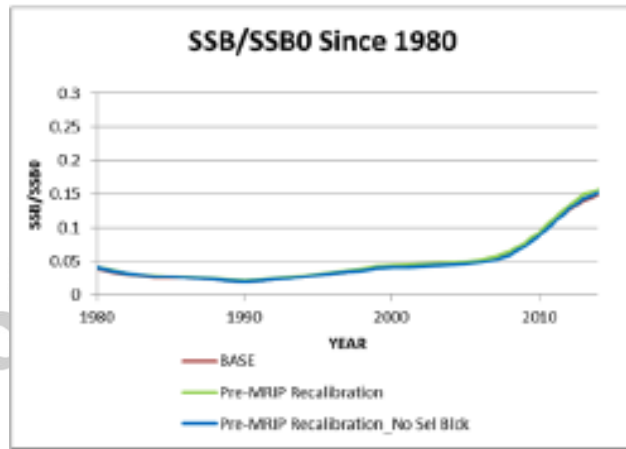

Figure 1. Annual estimates of spawning stock biomass relative to unfished levels during recent years.

Moreover, persistent overharvesting by the recreational sector reduced the annual yields the stock could produce to stay on track to rebuild by 2032. To cite just one example, in 2013, the quota was reduced from 8.69 million pounds to 8.46 million pounds because of recreational overharvesting in 2012,⁵ which meant that the commercial sector lost out on 115,000 pounds of quota (51% of the reduction) that year. So the catch reductions the commercial sector alone complied with to rebuild the stock were even more severe than they otherwise would have been because of recreational overharvesting. And in 2011, when an update stock assessment showed that the annual quota could be increased due to early signs of rebuilding success, the Gulf Council requested and the National Marine Fisheries Service (NMFS) implemented an emergency action that gave *the entire increase* to the recreational sector, despite its persistent overharvesting and in contravention of the 51%/49% commercial/recreational split adopted by Amendment 1.⁶

All this time the recreational sector was given a free pass while the commercial sector buckled down, implemented a management system with full accountability, and suffered the economic impacts associated with stock rebuilding and implementation of the individual fishing quota (IFQ) program (such as vessel monitoring systems (VMS) and increased reporting obligations). By contrast, the recreational sector did not suffer such impacts because its landings did not decrease and there was no limitation on participation. Participants in the private angler component of the recreational sector in particular suffered *no economic impacts whatsoever*.

In the *Guindon v. Pritzker* case, the court held that NMFS' failure to hold the recreational sector to its quota effectuated a *de facto* reallocation that violated Section 407(d), National Standard 4,

⁵ See 77 Fed. Reg. 64960, 64961 (Oct. 24, 2012) (explaining that the 8.69 mp quota for 2013 “was contingent upon the stock ABC not being exceeded in 2012” but that “[p]reliminary estimates indicate that the 2012 recreational red snapper quota (3.959 mp) will be exceeded by 440,000-840,000 pounds, which will result in the 2012 ABC being exceeded. As a result, the National Marine Fisheries Service Southeast Fisheries Science Center will evaluate the effect of this overharvest on the red snapper rebuilding plan.”); 78 Fed. Reg. 32179, 32181 (May 29, 2013) (setting reduced 8.46mp quota).

⁶ See 76 Fed. Reg. 50143 (Aug. 12, 2011) (“the Council requested that NMFS publish an emergency rule to assign the entire 345,000 lb (156,489 kg) of additional TAC to the recreational sector and suspend the October 1 closure date of the recreational fishing season”).

and the FMP’s requirements.⁷ The recent recalibration of recreational landings data only shows that this unlawful *de facto* reallocation was even more egregious than anyone previously thought. See Figure 2 below.

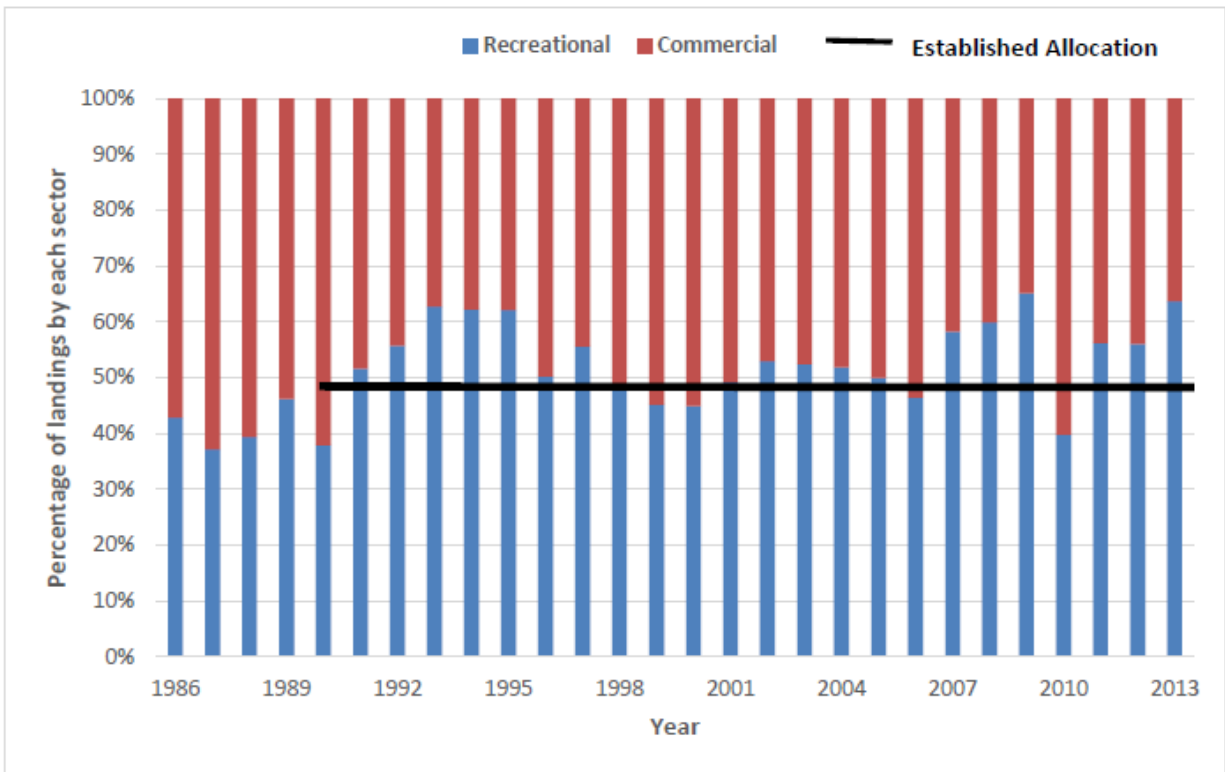

Figure 2. Comparison between the proportions of red snapper landed by each sector and the commercial/recreational split of the quota (established allocation of 51% and 49% to the commercial and recreational sectors, respectively.)

The purported failure to accurately estimate recreational landings, necessitating “recalibration” of recreational landings estimates, only harmed the commercial sector. To the extent that the stock withstood these higher levels of landings, the commercial sector should have been entitled to 51% of those higher levels pursuant to Amendment 1. Instead, the recreational sector caught 100% of those higher levels through an unlawful management regime. Thus, there is no “fair and equitable” basis for allocating the ACL increases attributable to recalibration of recreational landings estimates to the recreational sector as Alternatives 8 and 9 would do, because *the recreational sector was never harmed by the error that recalibration purportedly corrects*. Instead, it was the commercial sector that was harmed, to the tune of \$35 million dollars in forgone direct revenues (see below, p. 15-16) and untold indirect revenues up the supply chain.

⁷ See *Guindon v. Pritzker*, 31 F. Supp. 3d. 169, 193, 201 (D.D.C.2014) (“At a certain point NMFS was obligated to acknowledge that its strategy of incrementally shortening the [recreational] season was not working. Administrative discretion is not a license to engage in Einstein’s definition of folly—doing the same thing over and over again and expecting a different result.... NMFS essentially guaranteed that the actual catch allocation would skew widely from the 51/49 allocation, as indeed it did. This violated MSA Section 304(b).... When an agency blinds itself to the high likelihood that its actions will cause overharvesting, the Court cannot characterize those actions as ‘reasonably calculated to promote conservation.’” (quoting National Standard 4)).

Proponents of recreational fishing complain about a lack of fishing opportunities for red snapper, a complaint that is echoed in Amendment 28 itself,⁸ but the fundamental problem in this fishery has been *too many fishing opportunities by the recreational sector*, whether through prolonged non-compliant state water seasons or federal seasons that were set too long and allowed chronic overharvesting.

Amendment 28 fails to contain the analysis required by Section 303(a)(14) of the MSA, and all its reallocation alternatives arbitrarily benefit the recreational sector for a purported error that did not harm the recreational sector at all, but did harm the commercial sector which uniquely suffered the impacts of the harvest restrictions necessary to rebuild the stock. The Gulf Council's reallocation alternatives do not take into consideration the full economic impacts the commercial sector endured to rebuild the stock.

Not only does Amendment 28 fail to contain the requisite analysis, it is founded upon the baseless predicate assumption that the only "fair and equitable" allocation is one that shifts more quota to the recreational sector. This is untenable. In light of the comparative contributions to stock rebuilding between the sectors and the economic impacts that the participants in the commercial sector endured to rebuild the stock, there is absolutely no basis for the premise underlying Amendment 28 that "fairness and equity" require penalizing the commercial sector and rewarding the recreational sector. To the contrary, if there is to be any reallocation, the recovery benefits should inure to the benefit of the commercial sector, not the recreational sector.

In fact, given the belief that recalibration of recreational landings estimates indicates that the red snapper population was larger than estimated and could have historically withstood increased fishing pressure (i.e. higher ABCs and OFLs), recalibration demonstrates only that the ABC should have been higher, not that the 51%/49% commercial/recreational allocation formula should be changed. The point is that commercial fishermen should have had access to 51% of a higher ABC, not that their proportion of the total catch should now be reduced.

Preferred Alternative 8 would shift approximately 2.5% of the quota from the commercial to recreational sector based on a purported recalibration of historical recreational landings estimates. There is no basis for the implication that the recreational sector has been unfairly "wronged" by not getting 2.5% more than their 49% allocation when they've actually been catching more than that in 18 of the last 20 years.⁹ The allocation split may be 49%/51%, recreational/commercial but the landings have been 60%/40% recreational/commercial in favor of the recreational sector - which is much greater than the 51.5%/48.5% recreational/commercial split that would be implemented by Preferred Alternative 8. See Table 1 below.

⁸ Amendment 28 (August 2015) at p. 30.

⁹ Amendment 28 (August 2015) at p. 30.

Years	Recreational	Commercial
1986-2013	55.7%	44.3%
1991-2013	58.3%	41.7%
1996-2013	57.0%	43.0%
2001-2013	58.5%	41.5%
2006-2013	60.1%	39.9%

Table 1. Red snapper average percentages landed by the commercial and recreational sectors.

B. Reallocation will unfairly harm the commercial sector without providing any benefit to the recreational sector.

NMFS’ guidelines for National Standard 4, which also requires an allocation of fishing privileges to be “fair and equitable,”¹⁰ explain that an “allocation of fishing privileges may impose a hardship on one group if it is outweighed by the total benefits received by another group or groups.”¹¹ In contravention of this standard, Amendment 28 acknowledges that reallocation will harm the commercial sector, but will provide no benefit to the recreational sector because it does nothing to solve that sector’s problems.¹² Indeed, past history has proven conclusively that increasing the recreational quota provides no relief whatsoever to the problem of shortened recreational fishing seasons. The recreational quota has increased by nearly 1.5 million pounds in the last two years alone (from 4.15 million pounds in 2013 to a 5.61 million pound catch target in 2015), *an increase of 35%*, while the recreational season shortened from 42 days to 9 days (for the private angler component in 2015). A further increase of 2.5% for the recreational sector under Preferred Alternative 8 is nugatory.

Amendment 28 makes clear that shortened recreational fishing seasons in federal waters are primarily caused by Gulf states, which deliberately¹³ set fishing seasons in their state waters to conflict with federal regulations. In 2014 all five Gulf states allowed additional fishing days for red snapper in state waters¹⁴ and half of the entire recreational quota (2 million pounds of the 4.3

¹⁴ Amendment 28 (June 2014) at p. 104.

million pound catch target) was caught in state waters under these non-compliant regulations.¹⁵ Amendment 28 acknowledges that reallocation will have little-to-no effect on the problem of shortened recreational fishing seasons¹⁶, in part because Amendment 28 does nothing to address state non-compliance. Whatever amount of quota is reallocated to the recreational sector could be absorbed completely by additional fishing in state waters from non-compliant state seasons. Amendment 28 acknowledges that an “increasing proportion of the total recreational quota has been landed outside of the federal season under less restrictive state regulations.”¹⁷ Nothing in Amendment 28 arrests this trend. Amendment 28 thus guarantees harm to the commercial sector, but cannot guarantee any benefit whatsoever to the recreational sector. This does not comport with National Standard 4.

The commercial sector should not be unfairly penalized because the Gulf states make deliberate decisions to undermine the federal management regime for the stated purpose of benefitting recreational anglers in their states. We reject outright any notion that the recreational sector has suffered a “loss in fishing opportunities.”¹⁸ The very problem is that the recreational sector has had too many fishing opportunities relative to the health of the red snapper population, as seen by the fact that it has landed several millions of pounds of fish more than it was supposed to in recent years.

C. Reallocation unfairly penalizes seafood consumers across the country to reward a small segment of recreational anglers.

Fundamental to the MSA is the recognition that fishery resources contribute to the “food supply...of the Nation.”¹⁹ Thus, considerations of “fairness and equity” extend beyond the commercial fishing sector to the seafood supply chain and seafood consumers throughout the United States as well. Over 80% of Americans access their red snapper as seafood consumers, not by catching it themselves.²⁰ Taking access to this fishery from 80% of the public and giving it to 10% is neither fair nor equitable. Furthermore, when comparing access between the recreational sector and the seafood consumer, one must examine the “unit” by which access is measured. For the recreational sector, an appropriate unit is the number of red snapper anglers are allowed to keep on a recreational trip in federal waters (2)²¹. For the seafood consumer, the appropriate unit is an average serving size. For example:

¹⁵ Amendment 28 (June 2015) at p. 104-5.

¹⁶ Amendment 28 (June 2014) at p. 17.

¹⁷ Amendment 28 (August 2015) at p 69.

¹⁸ Amendment 28 (June 2014) at p. 30.

¹⁹ 16 U.S.C. § 1801(a)(1).

²⁰ 60 million US anglers in a population of 317.3 million, in 2013; <http://asafishing.org/newsroom/news-releases/new-report-highlights-recreational-fishings-broad-economic-and-conservation/>; <http://www.census.gov/popclock/>.

²¹ Recreational Fishing Regulations for Gulf of Mexico Federal Water (May 2015) at p. 3.

Recreational Access

1 recreational angler = two red snapper.

Consumer Access

Two red snapper * 7.07 pounds apiece (average)²² = 14 pounds of red snapper;
14 pounds of red snapper * 47%²³ yield off the knife = 6.6 pounds of skin-on fillets (approx.);
6.6 pounds of skin-on fillets * 16 ounces/pound = 106 ounces of skin-on fillets (approx.);
106 ounces of skin-on fillets / 6 ounces per average serving portion = 18 servings.²⁴

As such, the same two red snapper that provide one angler's access can provide access for 18 (or more) seafood consumers. Taking access from 18 (or more) consumers and giving it to 1 recreational angler is not fair or equitable.

D. Reallocation is unfair for several other reasons.

The commercial sector is further penalized because the range of Alternatives in Amendment 28 is too narrow. All of the action alternatives in Amendment 28 would shift quota from the commercial sector to the recreational sector; none of the alternatives would shift more quota to the commercial sector. This is an artifact of prior versions of Amendment 28, premised on now-discredited economic theory, in which the "purpose and need" was to increase "net benefits." Now the "purpose and need" for Amendment 28 has been completely revised to ensure a "fair and equitable" allocation, but all of the same old management alternatives remain in the document. This is a solution looking for a problem.

Most allocations in the Gulf already favor recreational anglers. All told, *recreational allocations exceed commercial allocations in eight of 11 (73%)²⁵ important Gulf fisheries*, including amberjack, cobia, red drum, gag grouper, red grouper, king mackerel, speckled seatrout, snook, and triggerfish; of these 8 species, two maintain allocations of 100% recreational (0% commercial) – red drum and speckled sea trout.²⁶ See **Table 2** below. All told, recreational fishermen land 79% of these species while commercial fishermen land 21%. These figures should not be further skewed towards recreational angling.

²² Amendment 28 (August 2015) at p. 20.

²³ David Krebs, President of Ariel Seafoods, Destin, Florida, personal communication.

²⁴ These calculations do not take into consideration >47% utilization of red snapper, which frequently occurs when throats, heads, cheeks, and the remaining carcass is used for gumbo or stock. This would increase the number of servings, potentially by a substantial amount.

²⁵ Share the Gulf, personal communication, August 5, 2015.

Table 2. 2013 Statistics For Recreational and Commercial Catch of Popular Gulf of Mexico Species.²⁷

It is reasonable to expect that proponents of recreational fishing will continue to push for reallocation using “recalibration” of historical recreational landings data as the purported justification. Reallocation based upon recalibration of recreational landings estimates must be considered a precedent for recalibration in other fisheries here in the Gulf and nationwide. There is inherent risk and intrinsic challenge to fairness and equity in setting a precedent where any fishery, commercial or otherwise, could be destabilized under the guise of recalibrating historical landings estimates.²⁸

Finally, fairness and equity should also be considered in the context of public opinion on Amendment 28. A vast majority of public comment has been opposed to reallocation. Of the 54 scoping comments that were received by NMFS during the Notice of Intent to Prepare an EIS (11/7/2013-12/9/2013), 54% (29) supported Alternative 1 (Status Quo).²⁹ In fact, we believe there to be unanimous public testimony from commercial fishermen and nearly-unanimous public testimony from charter industry all opposing reallocation. Also, it’s our understanding that over 12,500 public comments have been submitted to the Gulf Council, Gulf state Governors, and Congress that oppose reallocation.³⁰

Based on the wealth of data that confirm that reallocation is neither fair nor equitable, the only viable and legitimate alternative that the Gulf Council should choose in Amendment 28 is Alternative 1 (Status Quo).

II. Reallocation does not promote conservation.

A. Reallocation could exacerbate the problem of recreational overharvesting.

National Standard 4 also requires that management measures must be “reasonably calculated to promote conservation.”³¹ Amendment 28 candidly acknowledges that “it is not clear that the proposed reallocation alternatives would promote conservation, in light of the repeated and sizeable harvest overages recorded for the recreational sector.”³² *Indeed, the recreational sector has exceeded its allocation in 21 of the 23 years (91%) between 1991 and 2013 by almost 43 million pounds.*³³ *Between 2007 and 2013, the recreational sector has exceeded its quota in every year but one, and by an average of about 50% per year.*³⁴ *In 2013, the recreational sector caught more 208% of its quota.*³⁵ See Figure 3 below. As such, based on this historical record, if reallocation happens, we can expect 1.5 to 2 pounds of red snapper are going to be landed for every pound reallocated. Since all nine action alternatives in Amendment 28 would reallocate from the commercial to the recreational sector, all nine action items are not reasonably calculated to promote conservation. As such, the only viable and legitimate alternative that the Gulf Council should choose in Amendment 28 is Alternative 1 (Status Quo).

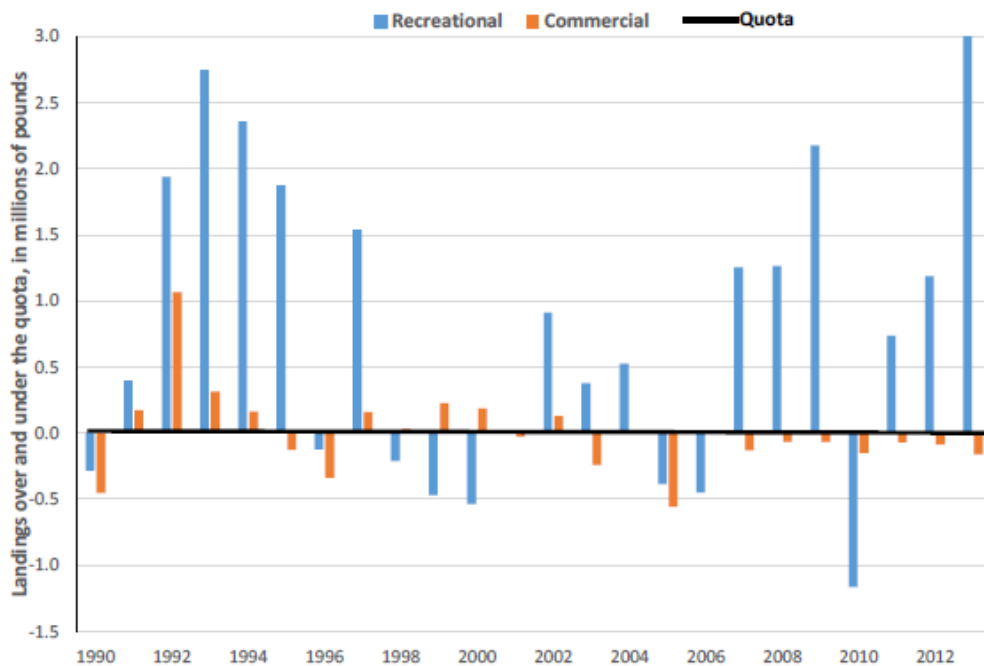

Figure 3. Differences between annual red snapper landings and quotas by sector, 1990-2013. For each sector, positive values indicate that landings are greater than the quota; negative values indicate that landings are less than the quota.

³⁴ *Id.*

³⁵ *Id.*

We acknowledge that recently enacted accountability measures required by the *Guindon* decision may curb the likelihood and mitigate effects of quota overruns, but only one year of data exists (2014) to evaluate their performance. This is not a sufficient time series upon which to make a permanent allocation change given the recreational sector’s history of chronic overharvesting.

B. Reallocation is projected to force the stock of red snapper in the eastern Gulf into a permanently and severely overfished condition.

Amendment 28 is also not “reasonably calculated to promote conservation” because it is projected to cause a decline in the spawning stock biomass in the eastern Gulf to near historically low levels. The Science and Statistical Committee (SSC) recently determined that the spawning potential ratio (SPR) “in the western Gulf continues to increase, but the SPR in the eastern Gulf declines, and the decline is exacerbated by increasing allocation to the recreational sector.”³⁶ Under the various reallocation alternatives, SSB in the eastern Gulf declines to just four to six percent of an unfished condition.³⁷ Reallocation risks managing the resource in the eastern Gulf into a permanently, and severely, overfished state. This would be accompanied by substantial under-fishing of a fully-rebuilt resource in the western Gulf, inevitably leading to a failure to achieve optimum yield from either area. See Table 3 and Figure 4 below.

OFL (Retained Yield Million of Pounds Whole Weight)						
YEAR	Rec 49%	Rec 51.5%	Rec 55%	Rec 60%	Rec 65%	Rec 70%
2015	16.10 mp	16.35	16.70	17.19	17.69	18.17
2016	15.31	15.50	15.72	16.06	16.39	16.71

³⁸ Amendment 28 (June 2015) at p. 52.

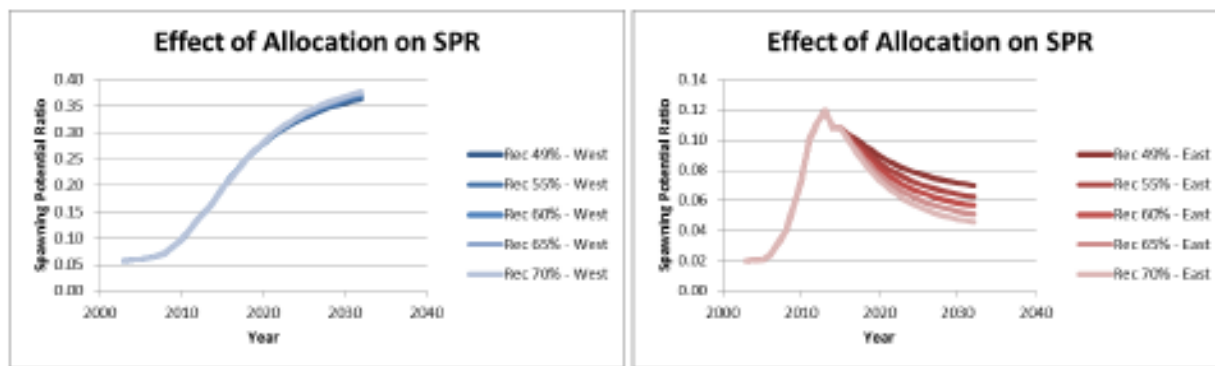

Figure 4. Regional trends in west and east red snapper spawning potential ratio under various recreational allocations.³⁹

To that end, the SSC unanimously concluded that “if the Council changes the allocation between the two sectors, this would prompt the need to reevaluate the OFL and ABC projections.”⁴⁰ Amendment 28 confirms this by stating, “Increasing the recreational allocation disproportionately increases the fishing effort in the east (where most recreational fishing occurs) leading to an increased fraction of the population removed in the east as the recreational allocation increases thus leading to a depressed stock size. In addition, the selectivity patterns differ, which the recreational sector in the east selecting larger fish than the commercial sector.”⁴¹ *The SSC’s recommended re-evaluation of overfishing limit (OFL) and ABC projections should occur before the Gulf Council makes a final determination on reallocation, not after, so that the Gulf Council is aware of the potential stock impacts resulting from its decision.* There is no reason this analysis cannot be performed now.

C. The impacts of reallocation are based upon several bold assumptions that are conclusory and contradicted by record evidence and which, if indeed are wrong, could mean that the rebuilding schedule will be jeopardized by reallocation.

The SEFSC’s projections about stock yields under the reallocation scenarios are based upon several “strong” (i.e., bold) assumptions that selectivity, discarding, retention and recruitment would continue unchanged into the future at levels observed in the recent past.⁴² The SEFSC acknowledged that if any of these bold assumptions are violated, the projected yields could be “higher than those required to permit recovery of the red snapper stock by 2032.”⁴³ This is troubling because those assumptions are conclusory and contradicted by record evidence.

In particular, “selectivity,” or the assumption that anglers are targeting larger fish, is conclusory; no documentation or support is provided in Amendment 28 to support the contention that anglers are “targeting” larger fish. To the contrary, several scientists have indicated that, rather than a shift in targeting behavior, selectivity is more likely a function of anglers encountering the larger

³⁹ Amendment 28 (June 2015) at p. 53.

⁴² Amendment 28 (August 2015) at Appendix H; SEFSC, *The Effect of Alternative Allocations for the Recreational and Commercial Red Snapper Fisheries in the U.S. Gulf of Mexico* (Mar. 9, 2015), at pp. 1-2.

⁴³ *Id.* at p. 2.

fish of strong year classes moving through the fishery, combined with recent poor recruitment in the eastern Gulf.⁴⁴ In other words, anglers are catching larger fish not because they are targeting them, but because those fish are relatively more available. As those strong year classes exit the fishery by around 2020, selectivity will likely change and revert to smaller fish.⁴⁵ The consequences to the stock from this change could thwart stock rebuilding, as the SEFSC acknowledged.⁴⁶

Even assuming against this evidence that selectivity is indeed a reflection of anglers' targeting behavior, that behavior is not static and is constantly changing. Retrospective conclusions can be drawn about selectivity because they have the benefit of hindsight; however, current or future selectivities cannot be determined with any reasonable accuracy because fishery and management conditions are constantly in flux. It is irrational to make permanent allocation changes based on an assumption that something that is constantly shifting, as a result of the individual choices my millions of recreational anglers choosing which fish to retain on any given day, will somehow remain static into the future.

The SEFSC's assumption that recreational discarding will continue at prior estimated levels is also flawed. The impacts analysis in Amendment 28 is predicated on the assumption that recreational discard mortality is only 10%.⁴⁷ *This assumption is outdated, no longer valid, and must be re-evaluated.* The 10% mortality rate assumes use of a venting tool, which is no longer required "due to questions of its efficacy."⁴⁸ Moreover, with an increase in faster and more seaworthy recreational fishing vessels using sophisticated navigational and fish-finding electronics, recreational anglers may also be fishing in deeper water than previously estimated⁴⁹ (which could be one possible explanation for the late-day landings observed in the revised MRIP sampling methodology), which could increase discard mortality rates due to barotrauma.⁵⁰ Rebuilding the snapper resource should encourage a general change towards targeting larger, older fish in deeper water. That would be positive for resource conservation, leading to higher long-term optimum yields – *if its benefits are not offset by an increase in dead discards.*⁵¹

It's our understanding that the MRIP data does not prove depth, so the assessment must assume depth ranges from the headboat observer and logbook data. According to the Southeast Data, Assessment, and Review (SEDAR) 31, the average depths (and associated discard mortality rates) for recreational discards of red snapper in the Gulf of Mexico were assumed to be between 108

and 118 feet.⁵² We question whether this depth range accurately and precisely captures the appropriate depth of the comprehensive recent Gulf-wide recreational red snapper effort today. Improvements to vessels (larger and faster boats, larger outboard motors), technology (global positioning systems, radar, fish finders), and weather forecasting, as well as other social and economic indicators like fuel costs and the desire for private anglers to maximize their trip limit with “trophy” red snapper, have likely facilitated a shift in recreational effort farther offshore and that the associated implications with discards and discard mortality haven’t been adequately analyzed. We know discards are a problem for the recreational fleet, as evidenced by the Figure 5 below,⁵³ but the *true impact on red snapper mortality may be currently underestimated* given the lack of comprehensive understanding of recreational discards and discard mortality.

Moreover, discarding is also likely affected by “selectivity,” if indeed selectivity is a reflection of anglers’ targeting behavior. If anglers are high-grading in order to retain larger snapper, then their discard rates have likely increased. But the SEFSC assumed otherwise for purposes of projecting yields as a result of reallocation. The SEFSC’s projections thus assume that there has been a change in targeting behavior, but fail to take into account the negative implications of such a change in behavior. The recreational sector should not obtain all the benefits but escape the negative implications of this purported behavioral change.

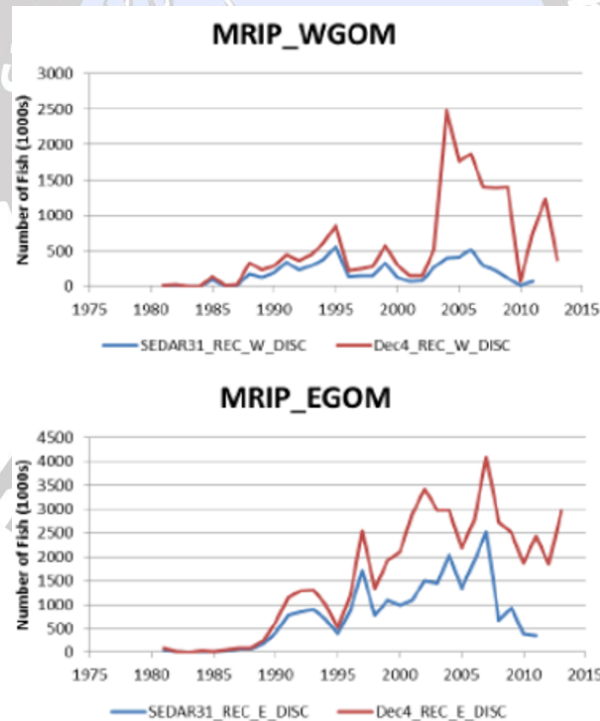

Figure 5. Effect of Rescaling MRIP Estimates for Discards

⁵² Gulf of Mexico Red Snapper Stock Assessment Report, SEDAR 31 (June 2013) at p. 26

⁵³ SSC Report Presentation to the Gulf Council (Revised), Dr. Patterson, (January 2015) at p. 1.

According to SEDAR 31, red snapper recruitment in the eastern Gulf has been low in recent years, especially since 2008.⁵⁴ With the dearth of young year classes, recreational fishermen may be targeting larger red snapper because smaller red snapper just aren't there. These "recruitment gaps" are being covered in the MRIP data due to selectivity. As they work their way through the fishery, we can expect the average size of red snapper to decline and along with it, the "selectivity" of the recreational fleet. If recreational fishermen had taken to targeting larger and older snapper because rebuilding has made those classes more abundant and so more attractive, the change in "selectivity" might be expected to persist and indeed progress further. However, if the altered targeting was simply a short-term response to the progression of year-classes briefly making older-age fish more available than younger and smaller ones, recreational "selectivity" may already have reverted to its pre-2011 values and, if not, will soon do so.⁵⁵

Based on the wealth of data that confirm that reallocation is not reasonably calculated to promote conservation, the only viable alternative that the Gulf Council may choose in Amendment 28 is Alternative 1 (Status Quo).

III. Reallocation is not sufficiently supported by economic justification.

A. The existing reallocation alternatives are borne from a now-discredited economic theory.

Prior versions of Amendment 28 identified that the Purpose of the document as was to "reallocate, in a fair and equitable manner, red snapper resources between the commercial and recreational sectors to increase the net benefits from red snapper fishing and increase the stability of red snapper fishing, particularly for the recreational sector that has experienced shorter and shorter seasons."⁵⁶ The support for this purpose statement came from an analysis from Dr. Juan Agar and Dr. David Carter that concluded that the only way to increase net benefits to the nation was to reallocate red snapper from the commercial to the recreational sector. On August 5, 2014, the Gulf Council's Socio-Economic SSC (SESSC) voted 6-1 to overwhelmingly approve a critique of the Agar and Carter economic analysis by Dr. Dennis King and Larry Buc. Subsequent papers, including those by Holzer and McConnell (2014) an Abbott (2015) now referenced in Amendment 28,⁵⁷ showed that because the quota is not efficiently allocated across the recreational sector, it could not be shown that reallocation would produce net economic benefits. As a result, the purpose of increasing net benefits was stricken from the document because there is no assurance that an increase in net benefits can be achieved by reallocation fish to the recreational sector.

B. Reallocation imposes economic harm on the commercial sector.

⁵⁴ See *Id.* at 9; see also Standing and Special Reef Fish SSC Report to the Gulf Council (May 20, 2015) at Fig. 8.

⁵⁵ Comments on Scientific Issues Relating to Re-Allocation in the Red Snapper Fisheries of the Gulf of Mexico, Dr. Trevor Kenchington (July, 2015) at p. 16.

⁵⁶ Amendment 28 (June 2014) at p. x.

⁵⁷ Amendment 28 (June 2015) at p. 17, 107.

Reallocation also imposes direct and indirect financial costs on the commercial sector and the seafood supply chain. Amendment 28 clearly states that any reallocation alternative “would be expected to result in economic losses to the commercial sector.”⁵⁸ This will be realized through direct economic losses to the shareholders and also to the captains, crew, shoreside infrastructure, wholesalers, retailers, and consumers of the red snapper harvested with that allocation. Foregone revenue also exists with the loss of non-target species harvested while harvesting red snapper – i.e. the removal of 100 pounds of red snapper allocation also removes the ability for the captain to harvest groupers and tilefishes he traditionally catches along with that 100 pounds of red snapper.

Reducing the commercial sector’s allocation risks stranding investments that were made in vessels and shoreside infrastructure based upon the rebuilding red snapper stock and the prospect for constant or increased future catches. Reallocation would be highly disruptive to the commercial sector, fishing communities, distribution channels, end user outlets (restaurants and grocery stores) and the development of domestic markets that are operating on an expectation of constant or increasing commercial quotas. National Standard 8 requires that measures shall “take into account the importance of fishery resources to fishing communities” in order to “provide for the sustained participation of such communities” and “to the extent practicable, minimize adverse economic impacts on such communities.”⁵⁹ To that end, reallocation violates this National Standard.

As stated before, the *de facto* reallocation that has already occurred due to the unlawful recreational overages in previous years has already cost the commercial sector millions of dollars in foregone revenue. According to the MRIP recalibration, the recreational sector caught 18 million pounds of red snapper more than they were allowed.⁶⁰ Based on the current 51%/49% commercial/recreational split between commercial and recreational allocations, commercial fishermen should’ve had access to 51% of that allocation (9.2 million pounds), valued at over \$35 million dollars. See Table 4 below.

Year	Recreational Quota	Actual Recreational Landings	Recreational Overage	De facto Reallocation*	Average Ex-Vessel Price Per Pound**	Commercial Sector Direct Economic Losses
2007	3.185	5.809	2.654	1.35354	\$4.10	\$5,453,540
2008	2.45	4.056	1.606	0.81906	\$4.36	\$5,179,060
2009	2.45	5.597	3.147	1.60497	\$4.40	\$6,004,970
2010	3.403	2.651	-0.752	N/A***	N/A***	N/A***
2011	3.866	6.734	2.868	1.46268	\$4.40	\$5,862,680
2012	3.959	7.524	3.565	1.81815	\$4.51	\$6,328,150
2013	5.39	9.639	4.249	2.16699	\$4.46	\$6,626,990
TOTAL				9.22539		\$35,455,390

* This column assumes the catch limit could have been set at the level of total landings for that year, and that the commercial sector could have taken 51% of the total pursuant to the 51/49 commercial/recreational split established by the FMP.

⁵⁸ Amendment 28 (June 2015) at p. xii.

*** 2010 is excluded because of fishing disruptions caused by the Deepwater Horizon oil spill.

Table 4. Commercial sector direct economic losses from de facto reallocation.⁶¹

Based on the wealth of data that confirm that reallocation is not sufficiently supported by economic justification, the only viable and legitimate alternative that the Gulf Council should choose in Amendment 28 is Alternative 1 (Status Quo).

IV. The analysis of the MRIP recalibration methodology is incomplete and not available for public review.

In 2014, a SEDAR workshop was held to calibrate the MRIP data from 2004 through 2012 to match the 2013 methodology, despite there being only the one year's data from the modified survey protocols available to work with. The outcome of that workshop was an explicitly "preliminary, interim approach."⁶² The authors of that approach stressed that their calculations assume that the ratio of peak-period to total catch has remained constant across time, which they acknowledged may not be "defensible from a scientific point of view."⁶³ That approach was apparently applied in the 2014 update assessment but it was only relevant to landings estimates for 2004–12. How the estimates for 1950–2003 were adjusted remains unknown.⁶⁴

That recommendation was based on the simplest of three approaches considered by the workshop, apparently for no better reason than that the other two were not fully developed, while the simple one would be easier to explain. Restating their concern multiple times throughout the report, the workshop participants offered the following conclusion: "We recommend that investigation continue on the remaining two methods. It is possible that one of them will be determined to be better at some future date."⁶⁵ To our knowledge, this recommendation has not been followed and additional investigation has not formally continued on the two remaining methods. This should occur before recalibration can be formally considered for reallocation purposes.

We acknowledge that the MRIP recalibration has already been used for management purposes, as it directly contributed to the increase in red snapper OFL/ABC in 2015. However, representatives from the commercial sector expressed concern with these increases as they appeared too risky from a conservation standpoint, and instead offered their support for conservative, constant-catch allocations. During the webinar, the Deputy Director of the Shareholders' Alliance stated that "Constant catch helps hedge our bets against the scientific and management uncertainty that you talked about earlier. We feel that it promotes better commercial and charter business stability, and increased recreational access in the long term."⁶⁶ Three months earlier, the Shareholders' Alliance

⁶³ *Id.*

⁶⁴ Comments on Scientific Issues Relating to Re-Allocation in the Red Snapper Fisheries of the Gulf of Mexico, Dr. Trevor Kenchington (July, 2015) at p. 2.

⁶⁵ MRIP Calibration Workshop II – Final Report, SEDAR41-RD55, March 24, 2015, p.19.

⁶⁶ Public testimony of Eric Brazer, Deputy Director of the Gulf of Mexico Reef Fish Shareholders' Alliance, Gulf of Mexico Fishery Management Council Webinar, March 3, 2015.

took the same position in the form of written comment submitted to the Gulf Council – “We are encouraged by the SSC-recommended projected increase in ABC between 2015 and 2017, but we are concerned with the projected decline in ABC between 2017 and 2020. We support setting conservative ABCs that promote stable or measured, continual increases in catch limits over time rather than declining yields.”⁶⁷

Recalibration has taken a very specific track in Amendment 28 as it focuses directly and solely on accounting for recreational red snapper landings that occurred outside the time period and/or sampling methodology of Marine Recreational Fisheries Statistics Survey (MRFSS). However, the concept of recalibration could be more widely applied. When thinking of recalibration in its most simple form (i.e. “retrospective analysis of unaccounted for mortality”), recalibration should be considered in the broader fishery context, including but not limited to unreported red snapper bycatch in the shrimp fishery, unreported commercial landings of red snapper, unaccounted mortality due to the Deepwater Horizon disaster and other oil spills, unaccounted mortality associated with the removal of oil rigs, and so on. Simply put, if recalibration is a tool that managers choose to use, it should be used in a comprehensive and fair manner to more accurately account for missing mortality fishery-wide.

Alternatives 8 and 9 in Amendment 28 are based upon the results of the 2014 update stock assessment. However, the written report of that assessment is not publicly available. Nothing more than a PowerPoint presentation was available when the work was reviewed by the Gulf Council’s SSC early in January 2015 and nothing more formal has been found on the SEDAR, SEFSC or Gulf Council websites. Therefore, although it was accepted by the SSC for the biennial setting of allowable catches, the update assessment cannot be said to have been subjected to meaningful peer review.

Based on the wealth of data that confirm that reallocation is based on an incomplete and unavailable methodology, the only viable and legitimate alternative that the Gulf Council should choose in Amendment 28 is Alternative 1 (Status Quo).

V. Alternatives 8 and 9 Violate MSA Section 407(d)(2)

Section 407(d) of the MSA provides that:

Any fishery management plan, plan amendment, or regulation submitted by the Gulf Council for the red snapper fishery after October 11, 1996, shall contain conservation and management measures that—

(1) establish separate quotas for recreational fishing (which, for the purposes of this subsection shall include charter fishing) and commercial fishing that, when reached, result in a prohibition on the retention of fish caught during recreational fishing and commercial fishing, respectively, for the remainder of the fishing year; and

⁶⁷ Written public comment of the Gulf of Mexico Reef Fish Shareholders’ Alliance, submitted to the Gulf Council on January 25, 2015.

(2) ensure that such quotas reflect allocations among such sectors and do not reflect any harvests in excess of such allocations. 16 U.S.C. § 1883(d) (emphasis added).

Alternatives 8 and 9 would reallocate quota to the recreational sector based on “the increase in the annual catch limit projections attributed [to] using the calibrated MRIP catch estimates to the recreational sector.”⁶⁸ Those “calibrated MRIP catch estimates” indicate that the recreational sector exceeded its quota by even greater amounts than previously estimated. Specifically, “since the allocation was established in 1990, in all but five years the recreational sector’s annual landings have represented a larger proportion of total landings than their [49%] allocation.”⁶⁹

The premise underlying Alternatives 8 and 9 is that the recreational sector caught more fish historically than previously thought, and so that sector should be allocated more fish going forward; specifically, the amount of the increase in catch limits attributable to revised estimates of prior recreational overharvesting. Reallocation under these alternatives is thus justified on the basis of prior recreational overharvesting. Under Alternatives 8 or 9, the recreational quota would thus “reflect” recreational harvests “in excess of such [recreational sector] allocations,” in direct violation of section 407(d)(2).

This is not to say that section 407(d)(2) would necessarily proscribe any reallocation of quota from the commercial to the recreational sectors, given a legitimate justification. But the specific manner in which the recreational quota is “established” under Alternatives 8 or 9 would cause the recreational quota to “reflect” prior recreational overharvesting, which section 407(d)(2) does not allow.

Conclusion

Reallocation of red snapper from the commercial sector to the recreational sector cannot be justified biologically, socially, or economically criteria. Reallocation, among other things, is not fair or equitable, does not promote conservation, lacks sufficient economic analysis, and relies on incomplete methodologies that are not available for public or peer review.

Reallocation raises procedural and management concerns, as the Science and Statistical Committee has indicated it does not solve the problem of declining fishing season lengths in the federal recreational red snapper fishery and harms the commercial sector. Furthermore, there is concern by many that the reallocation proposal in Amendment 28 violates a number of National Standards and provisions of the Magnuson-Stevens Fishery Conservation and Management Act.

Substantial public input, essential in the management of our natural fishery resources, demonstrates a strong desire for Alternative 1 (Status Quo).

Therefore, due to the overwhelming evidence before you, the only viable Amendment 28 alternative for the Gulf of Mexico Fishery Management Council to approve is Alternative 1 (Status Quo).

August 8, 2015
Gulf of Mexico Fishery Management Council
Re: Amendment 28

I hereby request that the Gulf Council vote NO on the proposal to re-allocate an increased share of the red snapper resource from the commercial to the recreational fishery. (I support Alternative 1—No Action.) Such a re-allocation would prove a disappointing deviation from the superlative work the council has accomplished in managing this species over the past 25 years.

The Gulf Council has come a long way since it first began to manage the red snapper fishery in the late 1980s and early 1990s. Back then, the unregulated and open-access fishery was growth overfished, at best, and after the council imposed its first restriction—a minimum size limit of 12 inches—landings abruptly declined because so many undersized fish had to be returned to the water. The decline was viewed with alarm and prompted calls for a complete closure of the fishery. In response, C&L Research—that would be Chickie and Linda, two women who worked at J&L Seafood in Leeville—mined the fish house's records and found that it had in fact purchased more red snapper in one year than NMFS claimed to have been caught in the entire Gulf. That the fishery back then was "data poor" would be an understatement.

Fast forward to today and, as with most fisheries, data collection is much improved but could still be better. Effort, however, has been reined in considerably, at least on the commercial side. From those early days when most anyone could, and did, sell their catches, the commercial fishery has, with considerable sacrifice, been rationalized to include only qualified professional participants who harvest red snapper under a progressive state-of-the-art system of individual fishery quotas and real-time reporting of landings. Meanwhile, participation in the recreational fishery has only expanded.

To accommodate that expansion, recreational industry members promote "solutions" that would immediately increase their market share. The proposed re-allocation aside, such council proposals as limiting recreational anglers to, for instance, a single red snapper per two or even three anglers are disingenuous at best if it is supposed that high-grading will not occur, given the effort and expense involved in offshore fishing.

Just as our national political system has of late devoted so much effort to the appeasement of minority interests, rather than those of the majority, the council is wasting time in short-sighted re-allocation efforts when it could be devoting time to more sustainable and progressive efforts that would improve the quality of the recreational anglers' sport. For instance, when I wish to go bowhunting for mule deer in western states, I am not able to just purchase a license and go hunting. Those days are long gone, for the same reason they are past in the recreational fishery—there are too many participants. Those western states are zoned into several different units, with so many permits allotted per unit—to obtain one I must enter a lottery. If I am not successful I can't go hunting but must wait until the following year to apply. If, however, I am picked, I am able to enjoy excellent sport, with an abundance of mature animals and virtually no disturbance by other hunters because their numbers per unit are capped.

By all indications, the time when anyone who wishes to go sport fishing can simply go, without

even the purchase of a permit, is past. Not only would a lottery allow winning anglers to retain generous enough bag limits to justify their effort and expense, funds generated by such a lottery could be applied to improved research on the fishery.

Another, less innovative and more easily accomplished improvement is suggested by the Maryland Model of striped bass allocation. In Maryland, the annual allocation is split evenly between commercial and private recreational anglers, with each sector receiving 42.5% of the TAC; the for-hire is allotted the remaining 15 percent. That this regime has been in effect since the early 1990s, in the striped bass's major Atlantic Coast spawning ground, attests to its success.

In closing, I hope the Gulf of Mexico Fishery Management Council will continue to evolve its management of the red snapper by considering these or other progressive options for the management of the recreational fishery, rather than acceding to the short-sighted demands of industrial recreational interests.

Sincerely,

--Robert Fritchey

Re: Lack of Access to Scientific Information Supporting Amendment 28

Dear Mr. Anson:

This law firm represents several commercial red snapper IFQ holders in the Gulf of Mexico and their associated entities who have long been engaged in management of the red snapper fishery.¹ The Gulf of Mexico Fishery Management Council (“Council”) is scheduled to take final action on Amendment 28 at its upcoming meeting. Amendment 28 is legally and substantively flawed, as explained in various letters and public comments submitted by our individual clients and others. The purpose of this letter, however, is to advise the Council that it is procedurally barred from taking final action on Amendment 28 because critical scientific information supporting that amendment has not been made available to the public.

The Magnuson-Stevens Act (“MSA”) provides that “[i]nterested parties shall have a reasonable opportunity to respond to new data or information before the Council takes final action on conservation and management measures.” 16 U.S.C. § 1852(i)(6) (emphasis added). In addition, NMFS’s National Standard Two guidelines explain that the MSA “provides broad public and stakeholder access to the fishery conservation and management process, including access to the scientific information upon which the process and management measures are based.” 50 C.F.R. § 600.315(a)(6)(iv) (emphasis added). Data collection methods “are expected to be subjected to appropriate review before providing data used to inform management decisions.” *Id.* § 600.315(a)(6)(v). The “data and procedures used to produce the scientific information” must be “documented in sufficient detail to allow reproduction of the analysis by others with an acceptable degree of precision. External reviewers of scientific information require this level of documentation to conduct a thorough review.” *Id.* § 600.315(a)(6)(vi)(A).

These requirements have not been met with respect to the scientific information supporting Amendment 28. In particular, Amendment 28 explains (at p. x) that:

¹ See plaintiffs listed in the Complaint for Declaratory and Injunctive Relief, *Guindon, et al. v. Pritzker*, No. 14-cv-45 (D.D.C. Jan. 10, 2014).

Preferred Alternative 8 and Alternative 9 would base reallocation on the effects of revised recreational data used in the [2014] update stock assessment that led to a higher stock ACL. These revisions included calibrated Marine Recreational Information Program (MRIP) catch estimates in the recreational sector and changes in the recreational size selectivity due to recreational fishermen targeting larger fish.

Unfortunately, although Alternatives 8 and 9 are based upon the 2014 update stock assessment, the written report of that assessment is not publicly available. Amendment 28 explains (at p. viii, note 2) that “[t]he written report for the 2014 red snapper update assessment is in preparation.” The public is instead directed to “[a] version of the PowerPoint presentation describing the assessment [that] was presented to the Council at its January 2015 meeting.” But the report itself, including a description of the assumptions relied upon and the underlying data and methodologies, all of which are necessary to test its conclusions, is nowhere to be found.

Apart from the legal requirement to provide this new information “before the Council takes final action”² on Amendment 28, its absence is troubling because the 2014 update assessment evidently relied upon two newly applied methodologies -- “recalibration” and “selectivity” -- to support its findings that catch limits could be raised. Those methodologies are now the driving force behind Amendment 28 and Alternatives 8 and 9, but the way in which they were implemented lacks publicly available documentation and raises conservation concerns.

First, it appears that the Southeast Fisheries Science Center (“SEFSC”) “recalibrated” recreational landings estimates going back over half a century to 1950, apparently based upon a “preliminary, interim approach” developed by a working group using one year of data from 2013 and assumptions that they admit are subject to “substantial criticisms” and may not be “defensible from a scientific point of view.”³ While the working group’s report is available,⁴ the SEFSC’s working papers showing how it applied the working group’s methodology to recalibrate 60+ years of landings estimates are not available. Without the 2014 update stock assessment report and the SEFSC’s working papers, there is no way for the public to understand the underlying assumptions and methodologies, or to reproduce the findings. Alternatives 8 and 9 of Amendment 28 are thus based entirely upon conclusory and undocumented assertions about recalibration and its effects upon the 2014 update stock assessment.

² 16 U.S.C. § 1852(i)(6). The 2014 update assessment report is being prepared by Southeast Data, Assessment and Review (“SEDAR”), which “is a Council process, governed by the rules and regulations of the [Councils].” See http://sedarweb.org/docs/page/SEDAR%20FAQs_J3_updateJB_2.26.2015.pdf. Accordingly, the 2014 update assessment report constitutes “new information” from a “Council advisory body” under § 1852(i)(6).

³ See Carmichael and Van Vorhees, MRIP Calibration Workshop II - Final Report (Mar. 24, 2015), at p. 19 (emphasis added).

⁴ See *id.*

Similarly, Alternative 9 is also based upon “selectivity,” or the assumption that recreational anglers are targeting larger fish and the effects of that assumption on the 2014 update stock assessment. Alternative 9 presumes that there have been “changes in the recreational size selectivity due to recreational fishermen targeting larger fish,”⁵ but again no support is provided for the conclusory assertion that recreational anglers are “targeting” larger fish. This is particularly troubling because that assumption about anglers’ *behavior* apparently triggered a substantial increase in stock yields under the 2014 update assessment. The SEFSC acknowledged that if this “strong” (i.e., bold) assumption about anglers’ behavior (among other “strong assumptions” it relied upon) is wrong, projected yields after reallocation could be “higher than those required to permit recovery of the red snapper stock by 2032.”⁶

A recent analysis by Dr. Trevor Kenchington concluded that this perceived “selectivity” might not be a behavioral change at all, but simply a reflection of anglers encountering the older fish from a few prior strong year classes moving through the fishery, coupled with recent poor recruitment in the eastern Gulf where the recreational fishery is focused.⁷ In other words, anglers were catching larger fish because they were relatively more available, and the catch makeup could change as those strong year classes exit the fishery. Dr. Jim Cowan with Louisiana State University has raised similar concerns.⁸ Moreover, even if this perceived behavioral change is in fact real, a shift back to anglers’ targeting behavior of just a few years ago could have severe negative implications for the stock,⁹ as the SEFSC also acknowledged.¹⁰

Before potentially exacerbating these problems by reallocating more fish to the recreational sector, which the SEFSC projects will only hasten the depletion of the spawning stock in the eastern Gulf to near record lows,¹¹ the Council and the public need a more thorough understanding of “selectivity.” Neither Amendment 28 nor any other document we can find adequately explains how “selectivity” was applied in this context, how it was measured, what observations were relied upon, how this purported change in angler behavior resulted in substantial increases in the ABC/OFL levels, how those increases were calculated, or what the effects would be if the assumption that anglers are “targeting” larger fish is wrong or changes over time.

⁵ Amendment 28 at p. x (emphasis added).

⁶ NMFS, Southeast Fisheries Science Center, Selectivity Runs to Evaluate the Effect of Recalibrated Recreational Removals and Recreational Selectivity on Estimates of OFL, ABC and MSY for Gulf Red Snapper (Mar. 9, 2015), at p. 2.

⁷ See Dr. Trevor J. Kenchington, Comments on Scientific Issues Relating to Re-Allocation in the Red Snapper Fisheries of the Gulf of Mexico (Aug. 2015), at p. 16.

⁸ See Letter from Dr. Jim Cowan to Gulf Council dated August 9, 2015 at pp. 6-8.

⁹ See Kenchington, *supra* note 7, at pp. 18-20, 24-30.

¹⁰ See NMFS, SEFSC, *supra* note 6, at p. 2.

¹¹ See Standing and Special Reef Fish SSC Meeting Summary, New Orleans, Louisiana (May 20, 2015), at Figure 5, p. 7 (showing that the SSB in the eastern Gulf declines to just 4-6% of unfished levels under the reallocation alternatives).

“[T]o meet their statutory and regulatory mandate, [NMFS] must have a ‘fairly high level of confidence’ the regulatory provisions they recommend will rebuild red snapper stocks within the statutorily required period.” *Coastal Conserv. Ass’n v. Gutierrez*, 512 F. Supp. 2d 896, 901 (S.D. Tex. 2007) (quoting *Natural Res. Defense Council v. Daley*, 209 F.3d 747, 754 (D.C. Cir. 2000)). This requisite “fairly high level of confidence” cannot be achieved given the significant doubts about “selectivity” as applied in the 2014 update assessment and by the SEFSC in projecting the impacts to the stock from reallocation.

* * * * *

NMFS’s National Standard Two guidelines define “emergent science” as “relatively new knowledge that is still evolving and being verified, [and] therefore, may potentially be uncertain and controversial.” 50 C.F.R. § 600.315(a)(4). Emergent science must accordingly “be considered more thoroughly.” *Id.* There is no question that “recalibration” and “selectivity,” as they were invoked in the update assessment, constitute “emergent science” and thus deserve more thorough documentation and review before being relied upon to make permanent management changes in this fishery that would cause significant harm to the commercial sector and potentially to the stock.

Indeed, as courts have recognized, “it is not consonant with the purpose of a rule-making proceeding to promulgate rules on the basis of inadequate data, or on data that, to a critical degree, is known only to the agency.” *American Radio Relay League, Inc. v. FCC*, 524 F.3d 227, 237 (D.C. Cir. 2008) (internal quotations & alterations omitted). Similarly, courts do not uphold agency actions that are “based on speculation,” nor do courts “defer to an agency’s conclusory or unsupported suppositions.” *Nat’l Shooting Sports Foundation, Inc. v. Jones*, 716 F.3d 200, 214 (D.C. Cir. 2013) (internal citations and quotations omitted). The MSA reflects these basic principles of administrative law in requiring that “[i]nterested parties shall have a reasonable opportunity to respond to new data or information before the Council takes final action on conservation and management measures.” 16 U.S.C. § 1852(i)(6) (emphasis added).

Apart from the legal and substantive flaws with Amendment 28, the Council is procedurally barred from taking final action on Amendment 28 unless and until the public is provided access to and a reasonable opportunity to comment upon at least the following scientific information:

- 1) The written report of the 2014 update stock assessment;
- 2) The SEFSC’s working papers showing the methods, assumptions and calculations used to recalibrate recreational landings data back to 1950, with sufficient detail to allow reproduction of the analysis by others with an acceptable degree of precision; and
- 3) To the extent not contained within #1, a quantifiable description and analysis of the apparent recent changes in “selectivity” purportedly observed in the recreational

sector, the effects of such “selectivity” on the 2014 update stock assessment, and the potential effects on stock rebuilding if assumptions about “selectivity” are wrong.

We ask that this letter be included in the administrative record for Amendment 28. Thank you for your attention to this matter.

Sincerely,

A handwritten signature in black ink, appearing to read "J. Timothy Hobbs". The signature is fluid and cursive, with a large initial "J" and a long, sweeping underline.

Subject: RS ALLOCATION Charlene please make sure this gets to the council members and posted Thanks Tom
Date: Sunday, August 9, 2015 12:57:35 PM Eastern Daylight Time
From: Tom Adams
To: Meetings, info@gilfcouncil.org, Charlene Ponce
Category: Charterboat, AP-Red Snapper

Gulf council members.

Please correct the wrong that was done when the original Red Snapper allocation was made. As all the commercial fishermen will tell you—They are now making more money than they ever have off of the red snapper fishery and this is at a cost; a very expensive cost—the shortening of the recreational season from 6 months a year to 9 days or whatever you decide this year.

The recreational season needs to be brought back to the original 6 month season before any more allocation goes to the commercial sector. And if you are just going to go by percentages the split should be 60% rec and 40 % commercial ..

If you need a good reason why the allocation split should be changed---According to the NMFS --
-“Recreational fishing in the US generates 7.9 BILLION more than the commercial fishing industry”

Thanks,

Capt Tom Adams

To show that what I describe concerning truncated age structure is not restricted to red snapper, the next few sections are taken largely from Hixon et al. (2014) in a paper entitled “BOFFFFs (big old fat fecund female fish): on the importance of conserving old-growth age structure in fishery population”. They state that fecundity generally increases with female age simply as a function of body size because a larger body cavity allows development of larger ovaries. In fisheries applications, the increase in fecundity with body size is accounted for by using the metric of SSB, which is an estimate of the total weight of mature female fish in the population. Application of SSB in assessment models relies on the assumption that females of different sizes produce the same number and quality of offspring per unit of body weight. Here, we do not consider the increase in fecundity with body size to be a maternal effect unless there is a difference in weight-specific or relative fecundity, the number of eggs per g of female body weight. If relative fecundity differs with maternal traits, then SSB is not an adequate metric for the reproductive potential of populations with different maternal age/size compositions.

Cooper *et al.* (2013) provide a clear example of the contrast between SSB and total egg production (TEP) with increasing age truncation (the figure below of spotted seatrout). It can clearly be seen in the figure that as F increases, the number of fish surviving to older age decreases and even modest increases in F can cause extreme reductions in total egg production. Although, I have not included the information in this brief white paper, Hixon et al. (2014) also provide a substantial review of literature showing that larger, older females usually produce eggs of higher quality than those spawned by young conspecifics.

Figure 2. Modelled abundance, TEP, and SSB at three fishing mortality rates (F) per recruit of spotted seatrout (*Cynoscion nebulosus*). Note the extreme age truncation and decline in egg production caused by even moderate fishing (Cooper *et al.*, 2013).

While the figure above is for spotted seatrout, it is widely recognized that in long-lived species with low natural mortality, females devote increasingly more energy into reproduction than growth as they age (review by Rolf 1992). In fact, relative fecundity has been found to increase with maternal age, and most especially, size in a wide range of species (Table 1). Stock assessments are increasingly incorporating such size- and age-dependent effects on fecundity. The degree to which older females produce disproportionate numbers of eggs and larvae varies greatly among species. In a review of 41 species of rockfish (genus *Sebastes*), Dick (2009) found that some of these differences could be explained by phylogeny. For example, species in the subgenus *Acutomentum* showed limited evidence of size-related differences in relative fecundity. In contrast, species in the subgenera *Rosicoh* and *Sebastomus* demonstrated strong increasing trends with size.

Table 1. Representative teleost species with relative (weight-specific) fecundity documented to increase with female age and/or size.

For multiple-batch spawners (fish that spawn multiple times in a season), total annual egg production depends upon the number and size of batches released each season. In fisheries applications, the common assumption is that batch number does not vary with female size or age. A thorough review by Fitzhugh *et al.* (2012) reported 21 species in which the number of batches increases with female age or size, four species that show a decrease, and nine species with no differences. Based upon modeling studies of different hake (*Merluccius*) species, Field *et al.* (2008) estimated a dramatic increase in batch number with age, from one batch per year at age 2 to fourteen batches per year at age 15. As with other aspects of maternal influences on reproduction, there is a clear trend towards BOFFFFs contributing disproportionately to future cohorts, but sufficient variability to indicate that such reproductive parameters must be evaluated on a species-by-species basis. Such interspecific variability adds further complexity to the development of management approaches that incorporate maternal effects.

In addition to exhibiting lower relative fecundity, younger, smaller females have been observed to skip spawning altogether in some years. Evidence of this effect has been observed in Atlantic cod (Rideout and Rose 2006), and the rockfish *Sebastes alums* (Hannah and Parker, 2007) and *S. aurora* (Thompson and Hannah, 2010). Rideout *et al.* (2006) demonstrated a clear relationship of reduced energy stores in the liver associated with skipped spawning, harkening back to Hjort's (1914) prescient analysis of cod. Variation in the extent of skipped spawning among years may

also be associated with differences in the quality of the larval environment (Rideout *et al.* 2006; Hannah and Parker 2007). In the recent work we have done comparing natural versus artificial habitats in the western Gulf of Mexico, Glenn (2014) collected data indicating that skip spawning of same age red snapper occurred in fish collected on artificial habitats. She concluded that this was likely do the lack of energy reserves of red snapper on standing and toppled platforms compared to fish found on natural shelf edge reefs.

Finally, BOFFFFs often begin spawning earlier and/or over longer spawning seasons than smaller, younger female fish, as documented in a variety of species (Table 3 below). Additionally, in multiple-batch spawners, older fish may produce more batches of eggs over a longer period each season, as documented in drum (DeMartini and Fountain 1981), anchovy (Parrish *et al.* 1986), striped bass (Secor, 2000a), haddock (Wright and Gibb, 2005), and sardine (Claramunt *et al.*, 2007), among others. For example, individual Atlantic cod can spawn over a range of 2 - 7 weeks, and by individuals spawning at different times, a population may spawn over a range of 4 -15 weeks (Marteinsdottir and Bjornsson, 1999). This has been shown to be true for red snapper by several authors.

Table 3. Representative teleost species with the timing of annual spawning or parturition documented to be earlier and/or longer with increasing female age and/or size.

Reviews by Miranda and Muncy (1987), Trippel *et al.* (1997), and Wright and Trippel (2009) provide additional examples.

Based upon information already provided, it would seem obvious that mature female red snapper have the potential to produce many batches of eggs over a lifetime and that older, especially larger red snapper females, and that older females spawn more often, produce many more eggs per batch, and over a longer period of time in during the spawning season. Annual fecundity estimates (AFE) also are high. (Woods 2003; Woods *et al.* 2007) estimated that annual mean fecundity estimates of red snapper off Alabama to be 13,401,861 ova based upon a mean batch fecundity (BFE) (N=197 fish) of 304,996 produced by 43.9 spawns per season. One 837 mm FL, 13 year old female captured off Louisiana had an estimated BFE of more that 7.9 million ova per spawn obtained from an ovary that weighed 2,020 g wet weight. With that female included, Louisiana females (N =100) produced a mean BFE of 643,812 in 36.10 spawns per year for an AFE of 23,243,560. Excluding that female, Louisiana annual mean BFE was 552,108 and AFE was 19,932,768. On average, Louisiana red snapper annually produced 7-10 million more ova per individual that did fish collected off

Mississippi-Alabama; however, females up to 725 mm FL and 6.5 years had greater estimated annual fecundities than similar sized and aged fish collected off Louisiana (Woods 2003; Woods et al. 2007, Kulaw 2012, Glenn 2014). Similar results have been found in red snapper in the South Atlantic (White and Palmer 2004; Lowerre-Barbieri et al. 2015) and in the extreme southern Gulf of Mexico (Brulé et al. 2010).

This temporal spread of reproductive effort provides a bet-hedging life-history strategy helping to ensure that some larvae are spawned at times of favorable environmental conditions, including high food availability (Cushing 1990, as foreshadowed by Hjort 1914) and/or low predation intensity (Bailey and Houde 1989; Winemiller and Rose 1992; 1993). Additionally, BOFFFFs may spawn in different locations than younger, smaller fish (reviews by Wright and Trippel, 2009; Hsieh et al. 2010), providing spatial as well as temporal bet-hedging. Empirical evidence for bet-hedging includes settlement of plaice (*Pleuronectes platessa*) occurring over several weeks despite spawning occurring over several months (Hovenkamp 1991). Likewise, the extensive occurrence of “sweepstakes reproductive success” (Hedgcock and Pudovkin, 2011) demonstrates the rarity of each individual contributing to recruitment in any given year. Evidence for the importance of BOFFFFs in bet-hedging includes the fact that first-time, late-spawning female haddock (*Melanogrammus aeglefinus*) contribute little to recruitment (Wright and Gibb, 2005; see also the state-based model of Wright and Trippel, 2009). Other empirical examples are provided in Secor’s (2007) review. Thus, there is increasing evidence that old-growth age structure is a better index of the reproductive potential of a stock than simply SSB alone (Marshall et al., 2003; Lambert, 2008). Overall, age truncation due to fishing may alter the timing and duration of annual reproduction by delaying and shortening the spawning season (Scott et al., 2006), contributing to the observed increase in recruitment variability for stocks comprised of only younger spawners (Marteinsdottir and Thorarinsson, 1998; Secor, 2000b; Wieland et al., 2000; Hsieh et al., 2006; Lowerre-Barbieri et al. 2015).

Deleterious consequences of age truncation for fisheries stability

It is increasingly well documented that age-truncated fish stocks are more variable through time, and thus more susceptible to collapse, than populations with more intact age structure. This pattern is especially but not exclusively true for “periodic species” (Winemiller and Rose 1992) that exhibit relatively low early survival, late maturation, and high individual fecundity (such as cods and rockfish). In short, old-growth age structure fosters population stability, whereas age truncation often destabilizes population dynamics (Rouyer et al. 2012). In the most comprehensive reviews to date, Hsieh et al. (2006, 2008), Anderson et al. (2008) and Hixon et al. (2014) found that fishing significantly increased fluctuations of stocks in the southern California Current ecosystem. They used multiple species and multiple stocks of the same species Anderson et al. (2008) tested three likely and non-mutually exclusive mechanisms proposed to explain this pattern. First, variable fishing intensity may directly cause population variability independent of any age-truncation effects (Jonzen et al., 2002). This hypothesis was falsified. Second, unlike BOFFFFs, small, young fish in age-truncated populations may not buffer environmental variability by “bet-hedging” reproductive output via a protracted spawning season (Murphy 1968; Leaman and Beamish, 1984; Longhurst 2002; Berkeley et al. 2004a; Hutchings and Reynolds 2004; Hsieh et al. 2005, 2006). Third, the demographic characteristics of age-truncated populations (in particular, the per capita population growth rate) may be prone to unstable dynamics (Dixon et al. 1999; Hsieh et al. 2005). Although both the second and third hypotheses are due to age truncation, they generate subtly different predictions: the loss-of-bet-hedging hypothesis predicts that a population will more linearly track environmental variation, whereas the demographic-alteration hypothesis predicts clearly non-linear responses. For the CalCOFI data, the demographic-alteration hypothesis provided the better fit, although there was also evidence for the loss-of-bet-hedging

hypothesis (Anderson *et al.* 2008).

Age truncation also inhibits stock resilience over time-scales longer than annual production. The extremely high fecundity of teleost fish, the commonality of relatively long lifespans, and the high variability of recruitment in annual cohorts all suggest that individual reproductive success is rare and episodic (Winemiller and Rose 1992). Recent technological advances in genetics have allowed quantification of effective population size (N_e) and estimations of the proportion of adults that successfully contribute to subsequent generations. Hauser and Carvalho (2008) report surprisingly low N_e in a taxonomically diverse range of marine species, suggesting that a large proportion of mature adults are unsuccessful at producing surviving progeny. Based upon the evidence of maternal effects outlined above, they suggest that only older spawners ready in years of excellent recruitment may have a chance to become rare “sweepstake winners”. For a 28-year time-series of pelagic juvenile rockfish surveys, Ralston *et al.* (2013) found a striking pattern of increased individual size, coherent among the ten most common *Sebastes* species, in years of high abundance. This result suggests that, in environmentally favorable years, larvae released earlier in the reproductive season had particularly high survival. Because older, larger rockfish females tend to release larvae earlier than younger, smaller females (Nichol and Pikitch 1994; Bobko and Berkeley 2004; Sogard *et al.* 2008), it is likely that much of the production in high-recruitment years came from BOFFFFs. Likewise Gold and Saillant (2007) and Saillant and Gold (2010) provide evidence that red snapper N_e in the eastern Gulf of Mexico is 10 to 100 fold lower than in the west; more recent results suggest that the effective population size off Mississippi-Alabama is very low (Gold, pers. comm.). In contrast, when environmental conditions were not favorable for early spawners, much of the production was likely derived from younger females, with reduced offspring abundance despite the presumably greater amount of SSB compared with older females.

Repeated spawning over many years increase the likelihood that an individual’s offspring will encounter a favorable environment in at least one of those years. In a recent paper focused on red snapper from the Florida east coast and the Carolinas, Lowerre-Barbieri *et al.* (2015) referred to this as reproductive resilience and infers that fishing practices that cause and perpetuate age truncation should be avoided, despite the observation that red snapper can occasionally produce strong year classes when spawning stock biomass is low. In short, old-growth age structure fosters population stability, whereas age truncation often destabilizes population stability and increases the probability of collapse.

I have concluded: 1) there is no justification for lowering the red snapper rebuilding target to $F_{20\%SPR}$ in the absence or management measures to lessen age-truncation, 2) benchmarks based upon biomass alone for long-lived species like red snapper, are necessary but insufficient for successful management, 3) management benchmarks should be devised to include a measure of age truncation (AT) rather than on simple spawning stock biomass (SSB). This is essentially what Phil Goodyear tried to tell us with SPR in his early publications. Ideally, it would best to combine the two (SSB and AT) into a single benchmark (like a much smarter P^*), but this will be difficult to do; and 4) changes to reduce derby (very short seasons) conditions in the for-hire and private recreational fisheries should be made via development of a dedicated access program as was done for the commercial red snapper fishery in 2007. It is time to admit that red snapper are still overfished (but may be starting to recover) and that fishing power now is higher now than anytime in the history of the fishery.

A Review of the Gulf of Mexico Red Snapper Fishery

By

JAMES S. CARPENTER, Fishery Biologist (General)

Bureau of Commercial Fisheries Exploratory Fishing Base
Pascagoula, Miss.

ABSTRACT

The developments of the fishery (fourth most valuable fishery in the Gulf) are shown by the following comparisons:

Vessels.-From a relatively small fleet of sail-driven schooners with live-wells for keeping fish to numerous diesel powered boats using ice for preserving the catch.

Fishing grounds.-From areas lying close to the mainland (inside 40 fathoms) off Florida and the "Middle Grounds" south-east of Pensacola to the "Western Grounds" off Texas and the Campeche Banks off Mexico.

Gear, equipment, and fishing methods.-From cotton hand-lines using the hand over hand technique to stainless steel lines with reels and improved terminal gear. From dead-reckoning and sounding techniques for navigation and locating fishable bottoms to modern electronic equipment, complete and accurate charts, and celestial navigation. From the generally ineffective cod gill nets, longlines, hoop nets, and fish traps for catching snapper to the highly successful modified otter trawls.

Handling and marketing.-From unsatisfactory fish handling techniques, resulting in poor quality fish, to greatly improved methods. From almost exclusive use of railroads for shipping fish iced in barrels to the predominant use of trucks for shipping boxes of iced fish.

Production.-From good catches made per boat by the relatively small snapper fleet, producing moderate total landings, to decreased catches per boat for a much increased fleet, making greater total production.

INTRODUCTION

The existing literature contains only few and incomplete descriptions of the red snapper fishery. Comprehensive descriptions have been made at various times by Stearns (1885); Jarvis (1935); and Camber (1955). There is, however, no up-to-date description. Since so many innovations in vessels, gear, and methods have been made in the past few years, and because the Bureau of Commercial Fisheries has received numerous requests for information on the snapper and grouper fishery, it is necessary to redescribe the fishery to include these changes.

HISTORY

The Gulf of Mexico red snapper fishery, pioneered by New Englanders, had its origin off the northwestern coast of Florida some 15 or 20 years before the Civil War. During this period, catches, taken by handlines from live-well smacks¹ and chings² that fished only the inshore waters, were either shipped to New Orleans "where they sold like hot cakes" (Collins, 1887) or were sold in Mobile (Warren, 1898). Some catches were sold in Pensacola for local consumption. "The existence of red snapper grounds in Florida waters and the potentialities of the waters offshore were unknown to the local people. In the early seventies of the last century the grounds fished were within the forty fathom line, between Mobile, Ala., and Fort Walton, Fla. The lack of experience as deep sea fishermen, as well as the absence of correct soundings, contributed further to the delay in the discovery of the red snapper banks off the Gulf coast." (Camber, 1955).

Not until after the Civil War (1872) was the fishery really started on a large scale (Warren, 1898). At this time, a New Englander built a fish house for handling and shipping red snapper and imported fishermen and live-well smacks from the North. In the following few years, with the organization of new companies and partnerships, the red snapper fishery in Pensacola became more firmly established. The Texas red snapper fishery developed in the 1880's (Camber, 1955), and at about this same period Mobile became one of the principal snapper centers. In 1932, two companies in Pensacola worked about 70 smacks and produced half the U.S. red snapper catch (Jarvis, 1935).

In the early fishery, live-well chings and smacks were used exclusively. These vessels were constructed to hold live fish in tanks or wells. Fish could be kept alive only for a relatively short period of time; therefore, fishing was confined mostly to grounds lying short distances from home ports.

A revolution in the red snapper fishery had its beginning when schooners brought ice from Maine. Fish dealers found that ice-packed red snapper remained in good condition for long periods. Although natural ice was available as early as 1868 (Collins, 1887), it soon became too expensive to use because of increased shipping costs.

¹"Smacks" are large schooners of 50 to 60 tons, carrying 8 to 12 men. They spend at least 17 and up to 32 days at sea.

²"Chings" are small sailing vessels over 5 but not exceeding 20 tons, carrying 3-7 fishermen. They spend a maximum of 10 days at sea.

In 1895, ice manufacturing plants began producing ice at a reasonable price. With disappearance of prejudice among fishermen against the use of ice for preserving fish, live-wells were eventually abandoned (Camber, 1955). With vessels modified or constructed to carry ice, fishing ranges were extended, and, as a result, much larger catches were landed.

After the turn of the century, most snapper grounds from Texas to Florida and along the entire Bank of Campeche had been fished. Several years later, vessels began to fish off the coast of Mexico. Major areas initially fished off Mexico were directly south of the Rio Grande River and east-southeast of Vera Cruz, Mexico. Some vessels would make the complete circuit and fish the entire Mexican coast from the United States-Mexico border to the Yucatan peninsula. Now, U.S. vessels fish on all known snapper grounds in the Gulf.

In the past few years, with only a few vessels lost or retired and numerous vessels constructed, the size of the commercial fleet has increased tremendously. More boats were built in the past 12 months than in the previous 12 years. In the early fishery, a minute fleet of sail-driven smacks and chings fished out of one port (Pensacola) in northwestern Florida; today a vast fleet of diesel powered vessels fish regularly from numerous ports along the Gulf coast.

VESSELS

The early live-well chings and smacks had holding tanks or "wells", which were made by installing two watertight bulkheads. The tanks or wells occupied about one-third of the total length of the vessel. Water was supplied to the wells through several hundred sugar holes bored in the hull (Jarvis, 1935). When ice was used to preserve fish on vessels, the wells had to be modified to keep ice. Later, new vessels were built with ice boxes. The number and size of ice boxes or bins vary as do their insulative properties. Chings usually have four boxes, each of which holds 500 to 3,000 pounds of fish. The larger smacks have six to eight boxes, each with a capacity of 3,000 to 5,000 pounds. The smaller chings do not make lengthy cruises, so their holds and ice boxes are poorly insulated, having only tar paper tacked to the bulkheads and thin layers of cork and sheathing elsewhere. Conversely, smacks are well insulated with tar paper, 4- to 6-inch cork slabs, and sheathing (Jarvis, 1935). Styrofoam slabs, 4- to 6-inches thick, are used in place of cork. The entrance to each ice box is closed off from the hold with 3/4- by 6- by 30-inch shifting boards and bottom and top doors.

The smaller vessels or chings that fished for snapper were usually of the schooner design; however, some were nondescript with numerous variations in hulls and riggings. Chings were 30 to 40 feet long and between 10 and 20 tons, with most less than 15 tons. They had a 3- to 7- man crew, and trips were seldom more than a week. Chings could never handle more than 5,000 pounds of fish; usual catches ranged from 500 to 3,000 pounds. In 1885, snapper boats increased in size to more than 20 tons net (Stearns, 1885). Later, with the introduction of the larger schooners or smacks of the 26- to 50- ton class, a definite size distinction became obvious (Camber, 1955).

The larger two-masted schooners or smacks which were 50 to 100 feet long carried 8 to 12 men, and

fishing trips were 2 to 4 weeks (figs. 1 and 2). The increased size of these vessels, compared with chings, enabled them to make longer cruises and to explore offshore grounds.

A boost was given to the fishery after the turn of the century when sail-rigged smacks were powered with auxiliary gasoline engines; in the early 1920's diesel engines provided a further boost. With motor-powered vessels, fishermen were not as dependent on weather as they

had been when only sails were used. Freed from dependence on winds, the boats needed less time for passage to and from fishing grounds and more time was spent in the actual fishing operation.

In 1923, over half the vessels operating from Florida ports were auxiliary-powered sailing vessels. In 1939, the first modern diesel engines were installed in snapper boats. By 1945, most snapper vessels had converted from auxiliary-powered sailing vessels to diesel

Figure 1.--The Buccaneer, built in 1925, is a 105-gross ton, 103-foot two-masted schooner of the type used in the early fishery. A few are still in use today.

Figure 2.--The Star Queen, built in 1953, is a 71-gross ton, 68-foot motor sailboat.

powered vessels (Camber, 1955). Some diesels were installed during World War II; however, the ready availability of surplus engines after the war was probably the main factor that contributed to complete dieselization. Although the adoption of diesel engines has changed the mode of locomotion, sails are still used on boats for stabilization. The main engine, together with the steadying effect of the mainsail ("spanker"), is used to maintain position on fishing grounds, where winds and currents are variable.

As a result of the varying profitability of the fishery, the size of the commercial red snapper fleet has fluctuated considerably in the past. From 1935 to 1955 only 3 to 4 new boats were added to the snapper fleet; however, during the past several years new and more modern vessels have been built -- about 15 vessels are under construction. The new vessels have a modified schooner design that incorporates features of the New England schooner and of the deep water shrimp trawlers.

These vessels have schooner bows and use a "spanker" or mainsail. Most new vessels are 65 to 80 feet long and have larger horsepower engines than were previously installed on the older smacks. Also, there has been a reduction in the amount of sail (fig. 3).

The arrangement of all superstructure is the prerogative of the captain for whom the boat is built. Probably the greatest variations in new vessels are in the positions of the galley and mast, whether they are placed forward or aft of the pilothouse.

Figure 3.--The Silver Chalice, built in 1964, is a 63-gross ton, 72-foot snapper boat.

Figure 4.--The Ten Kids, built in 1964, is a 58-gross ton, 70-foot combination vessel that can be used to fish for snapper and trawl for shrimp.

Some of the new boats are constructed so that they can be used as combination vessels to fish for snapper and shrimp (fig. 4).

Statistics compiled by the Bureau of Commercial Fisheries for 1962³ list 420 snapper and grouper vessels in the Gulf of Mexico. Also, N.L. Pease (personal communication) said that 546 vessels fish the Gulf waters for snapper and grouper. Although these totals are documented, they appear high and probably do not represent the

actual size of the commercial fleet that consistently fishes for snapper and grouper. Evaluation of information gained through interviews with industry members (fish company officials, vessel captains, and fishermen) indicates that shrimp and sport fishing vessels, which fish on only a part-time basis, form the greatest part of the above values. The size of the commercial fleet (smacks and chings), which fishes only for snapper and grouper, probably does not exceed 300 vessels.

³ 1962 statistics of the number of vessels fishing for snapper and grouper in the Gulf of Mexico, compiled by the Branch of Statistics, have not yet been published and are, therefore, unofficial.

FISHING GROUNDS

During the early period of the fishery, chings fished only inside the 40-fathom curve between Mobile Bay, Ala., and Cape St. George, Fla. (fig. 5). Because of its proximity to the grounds and other advantages, such as communications, transportation, and harbor facilities, Pensacola became the red snapper center. "Before 1880 it was common for smacks to make weekly trips, and they were seldom compelled to go far for good fishing" (Warren, 1898). In 1883-84, however, heavy fishing pressure on the waters parallel to the edge of the continental shelf caused the area off Pensacola to become less productive. Consequently, vessels had to sail 200 miles southeast of Pensacola to an area called the "Middle Grounds" (fig. 5). In due time, the increased fishery on the "Middle Grounds" resulted in rapid declines in catches (Stearns, 1883).

With discovery in 1885 of new snapper grounds between Tampa and the Dry Tortugas by the U.S. Fish Commission research vessel *Albatross* (Collins, 1885), and discovery of excellent snapper grounds (Galveston "Lumps" or "Western Grounds") off Texas in the 1880's (Camber, 1955), new centers were established, and the fishery gradually spread out from Pensacola. These cen-

ters, Tampa, Carrabelle, Apalachicola, Panama City, and Niceville, Fla.; Pascagoula, Miss.; and Freeport and Brownsville, Tex., were supplied with fish caught by smaller vessels on grounds that had been abandoned earlier by the larger vessels (Camber, 1955). New ports that have developed as snapper centers in recent years are Bayou La Batre and Gulf Shores, Ala.; and Corpus Christi, Port Arthur, and Aransas Pass, Tex.

Not until about 1890 did smacks begin to fish for snapper on the Campeche Banks. Although fish could be taken from that area on a year round basis, the heaviest fishing pressure was generally during times of the year of adverse weather (winter) on the U.S. side of the Gulf. During winter, good catches could not be made on the Florida and Texas coasts.

By 1897, with continued emphasis on the Campeche Banks, numerous smacks from Pensacola, Mobile, and Galveston fished on a year round basis. At the turn of the century the areas fished (Arcas Cay, Triangle Cay, Arenas Cay, and Alacran Reef) were confined easterly by the Tortugas at lat. 24° N., long. 83° W. and extended westerly across the banks to lat. 20° N., long. 93° W. (Camber, 1955) (fig. 5).

With snapper schooners compelled to sail 400 to

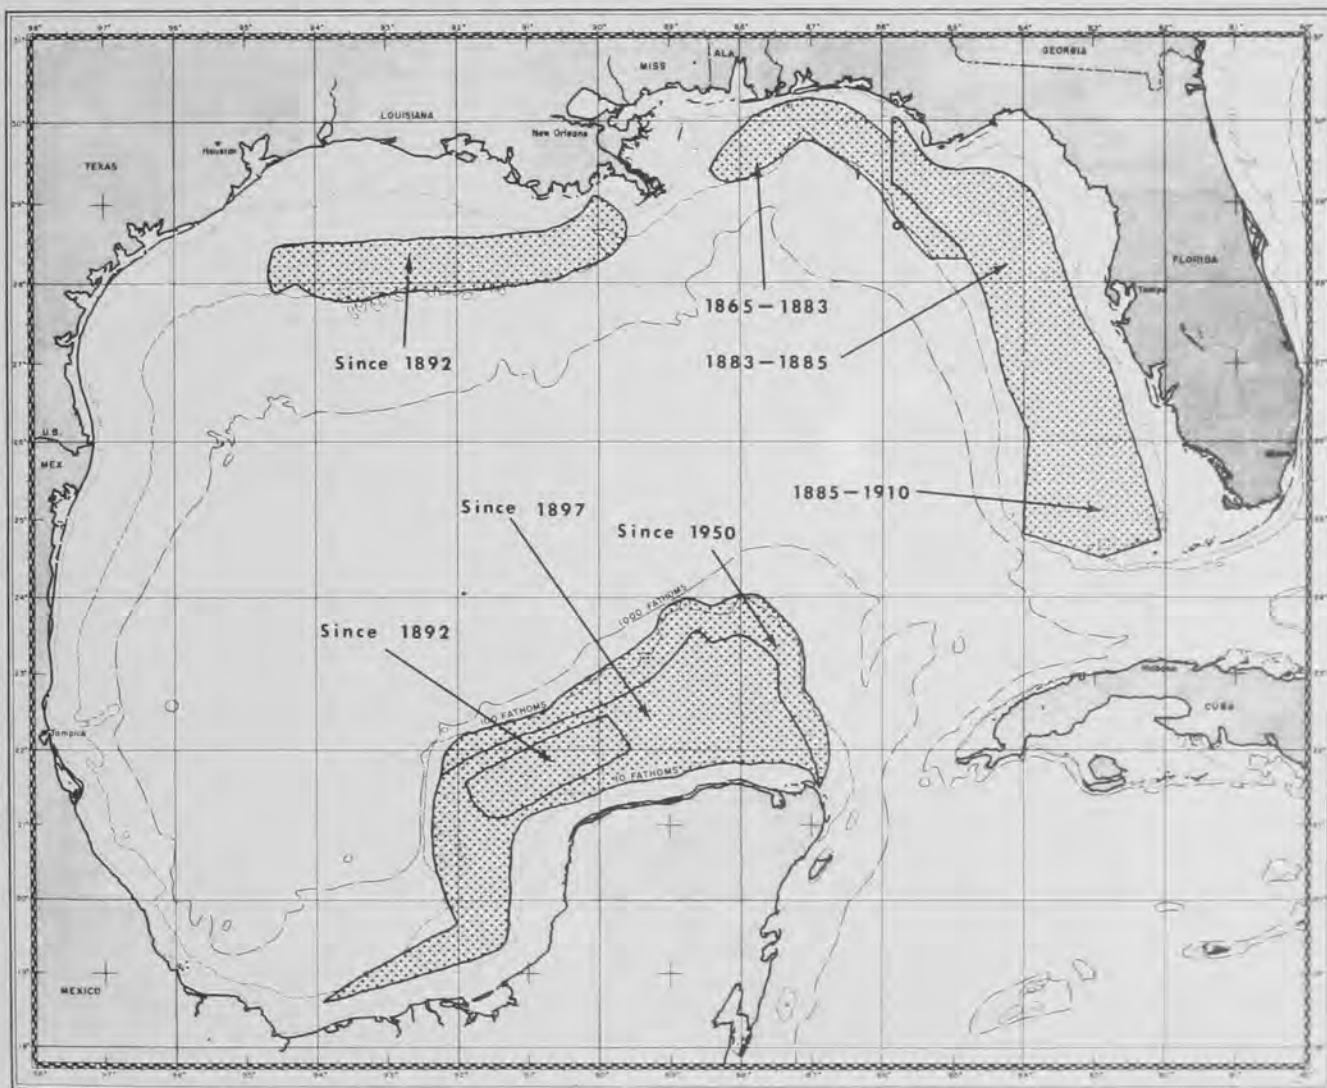

Figure 5.--Major sources of snapper in the Gulf of Mexico since 1865 (Camber, 1955).

700 miles to reach the Campeche Banks, the average fishing trip was about 23 days, of which 8 were allotted for the outward and homeward passage.

Through the years, even with ever increasing fishing pressure, Campeche Banks have remained the most important snapper area in the Gulf. Jarvis (1935) estimated that 75 percent of all snapper taken in 1933 were from the Campeche Banks. Company officials of the larger snapper companies in Pensacola and Mobile have agreed with this estimate of 75 percent of the snapper and grouper catch coming from the Campeche Banks (personal communications). In 1935, however, about 50 percent of the total catch came from U.S. waters. This reduction in Campeche's contribution can probably be attributed to increased fishing activities on the "Western Grounds", an area from a few miles south-southwest of the Mississippi River Delta to Galveston, Tex., at depths of 10 to 100 fathoms (fig. 5). Areas fished in 1933 were from the eastern limit in about lat. 21° 20' N., long. 86° 40' W., with the northern limit about 400 miles from Pensacola (Jarvis, 1935).

In 1935, vessels from Pensacola and Mobile took their fares from all portions of the Campeche Banks while Galveston schooners fished from the Triangle Reefs northward. The Tampa and Panama City fleets usually worked only the eastern area of the banks. At this time, Mexican and Cuban schooners were also fishing that area (Jarvis, 1935).

Camber (1955) states that about 40 vessels fished the Campeche Banks between 1937 and 1951 and lists the areas as follows:

a. "The Eastern Grounds"--a triangular area formed by a line running along the 25 fathom curve from Cape Catoche to Alacran Reef, then running northeast along the 60 to 65 fathom line to longitude 88° W. and latitude 23° 30' N., and from there back to Cape Catoche.

b. "Between the Reefs"--a rectangular area between the Alacran Reef and Arcas Cay, bounded seaward by the 65 to 70 fathom line, and inshore by the 15 fathom line.

c. "Arcas Grounds"--an area between the 18 and 55 fathom lines, confined in the north by a line running from Arcas Cay inshore and tapering off in the southwest toward Vera Cruz, Mexico.

"In 1950-51 fishing commenced on new grounds consisting of an area formed between the former most northerly and westerly seaward limits of the fishing area and the 140 fathom line." (Camber, 1955) (fig. 5).

Between 100 and 150 commercial snapper vessels, sailing out of about 15 Gulf coast ports, fish all portions of the Campeche Banks (inside the 100-fathom curve from the eastern edge of the bank southwest toward Vera Cruz, Mexico) and the "Western Grounds" off Texas. Also, U.S. vessels fish off the Mexican coast from an area east-southeast of Vera Cruz, referred to as the "Mountains" up to the United States-Mexico border. An estimated 200 or more pleasure boats, from the Florida west coast to Texas, make occasional trips to the inshore snapper banks. In addition, an unknown number of commercial shrimp boats occasionally fish for snapper.

The Campeche Banks are considered the most

important snapper area in the Gulf. An estimated 30 to 60 U.S. vessels can be seen on the Banks at any time of the year. Captains of snapper vessels fishing the Campeche Banks have stated (personal communications) that most fishing effort is concentrated near Arcas, Obispo, The Triangles, and Nuevo. In the past few years not much fishing has been done in the Arenas, Alacran, "The Eastern Grounds", and "Northern Shelves" areas; however, boats are gradually shifting back to these areas, especially to the "Northern Shelves" and "The Eastern Grounds", down to an area near Cape Catoche. Depths fished range from 20 to 100 fathoms with heaviest concentration of effort in 25 to 60 fathoms.

Concentrations of red snapper are usually found only over certain types of bottoms. Irregular hard bottom formation (submarine elevations or lumps and depressions or gullies) of rock or limestone covered with live coral and grass are especially preferred by snapper. However, as stated by Camber (1955), "The number of such habitats is relatively small." Fish schools are usually located several feet off the bottom of lumps and gullies where food material brought in by eddying current settles out. The Gulf of Mexico snapper lumps are usually small in area (less than a mile), although a few snapper banks are known to extend for several miles. Hard bottoms are the preferred habitat for snapper and grouper, yet good catches have often been made from mud and sand bottoms.

Red snappers have been reported from Brazil in Massachusetts and have been taken from waters of less than 10 fathoms out to 140 fathoms.

From 1950 to 1960, U.S. Fish and Wildlife Service exploratory vessels fished for snapper at several hundred locations in the Gulf. Results of fishing operations from areas known to the snapper fishermen, as well as exact positions of productive areas discovered by exploratory vessels, were provided the industry.

In 1956, an uncharted rock "ridge" was found by the R/V Oregon. The ridge, which was 50 to 100 yards wide and 2 to 8 fathoms above the surrounding bottom, originated near lat. 27° 57' N., long. 94° 55' W. and extended several miles in an east-southeasterly direction along the 50-fathom curve. Echo recorder tracings showed good indications of fish along the entire ridge. A series of handline stations made at various points along its length yielded about 1,600 pounds of red snapper and 300 pounds of grouper in 1 day's fishing (R/V Oregon Cruise Report No. 38, 1956). All information gathered by the Oregon was passed on to the snapper fishery. As a result of this disclosure, vessels from Texas and Florida started fishing this ridge and caught 200,000 pounds of snapper and grouper in 1 month. Although not documented, further reports on the ridge revealed that 500,000 pounds of fish were taken in a 3- to 4-month period after its discovery.

Considerable changes have been made in navigational techniques since the snapper fishery began. In early years fishermen knew little about celestial navigation but relied entirely on dead reckonings and soundings. Although smacks were able to sail all areas of the Gulf, errors in navigation resulted in loss of time and fuel. Upon reaching the fishing grounds, fishermen used sounding methods to locate actual fishing spots. The first mate used a sounding line with baited hooks attached to try to locate both hard bottom and snappers. Almost invariably when hard bottom was found, one and sometimes

two snappers were hooked. At this time, all hands, including the skipper and cook, would join in the fishing operation (Wallace, 1923). Inasmuch as snappers are scarce on soft bottoms and hard bottoms were often difficult to locate, many hours were spent in searching. When a "hot spot" was located, vessels were either anchored or allowed to drift across the area. A more productive fishery evolved as information was accumulated on positions of snapper banks (gained through years of fishing experiences), and complete and accurate charts depicting depths and bottom types were introduced. But not until the introduction of modern navigational instruments were fishermen able to "pinpoint" latitudes and longitudes. With radios, depth recorders, and lorans as standard equipment, fishermen have little difficulty in locating and staying over fishable bottoms. Once a vessel reaches a fishing area, the depth and topography of the bottom (recorded by depth devices) determine the anchorage spot where the actual fishing will commence.

A fish finder, "which utilizes an oscilloscope to electronically portray the bottom composition and fishes present under the boat" (Moe, 1963) was tested by the R/V Oregon. This device was found to be promising in

locating concentrations of snapper. "Good correlations of trial handline catches were found with indications of fish on the fish finder, conversely, no fish or few fish were hooked over good appearing rocky bottom where it failed to show fish" (R/V Oregon Cruise Report No. 19, 1953). Such fish finders are most often used as additional instruments on board vessels equipped with recording fathometers (Moe, 1963).

Depth sounding devices of several types are used in the fishery. The Recorder Type records the depths graphically by stylus tracings which correlate actual depths and topographies. Permanent recorded tracings or markings on paper can be retained for future reference. One of this type, "the white line recorder," has been introduced and used with great success in the fishery. It records graphically the seabed, its consistency, and fish concentrations on or above the bottom. With this instrument fishermen can locate gullies and lumps and actually distinguish between hard and soft bottoms. The Indicator Type has a flashing light viewed on the calibrated screen of a cathode ray tube. This second type of depth sounding device is not commonly used.

Figure 6.--Fisherman retrieving fish with hand reel.

FISHING METHODS AND GEAR

Today's fishing operations are basically similar to those in the past; i.e., a line with baited hooks is suspended about 1 to 3 feet above the bottom. When a bite is felt, the hook is set by a sharp jerk and the fish is brought up, unhooked, and thrown aside. Today a hand reel (fig. 6) is used to bring up the fish, while in the past the "hand over hand" technique was used.

Baits most commonly used in the fishery are ladyfish, Spanish mackerel, blue runners, mullet, cigar-fish, menhaden, shrimp, and squid. Most bait is bought in a frozen condition rather than fresh as it was in the early fishery. Bait is placed in wooden or steel barrels aboard vessels and salted on the outward passage to the fishing grounds. Salting hardens the bait and subsequently makes it more difficult for fish to strip it from the hooks. After the fishing area is reached, the thawed and salted bait is cut into small strips and threaded on the hooks. Fishermen consider ladyfish and squid to be most effective in catching fish. Squid are imported from the Atlantic and Pacific coasts, while ladyfish are bought from Florida dealers.

Jarvis (1935) said the handlines are "made of no. 12 tarred cotton line and average about 100 fathoms in length. When not in use the lines are coiled down in small wooden tubs. A pear-shaped 'patent' lead is used by most fishermen. These leads come in several different weights, but the usual weight is $3\frac{3}{4}$ pounds. A short brass rod, ending in an eye with a box swivel, projects at an angle from the lower end of the lead. To this are fastened two, sometimes three, 3-foot gangings, each with a no. 4 Mustad japanned hook."

Changes in snapper gear, as noted by Camber (1955), have been in the use of untarred hard lay net twine for handlines and Kirby Nos. 3, 4, and 5 hooks rather than Mustad japanned hooks. In recent years there has been a change from hard lay net twine to $3/64$ -inch stainless steel line on reels. Also, fishermen have returned to the use of japanned or "tuna circle hooks", Nos. 6 to 9. Fishermen claim that these hooks do not have to be set, since the fish will hook themselves. Nos. 5 and 6 hooks are most widely used in the fishery. From 5 to 15 of these hooks are secured to a line. Off the Texas coast ("Western Grounds"), snapper are located in shallower waters and are predominantly smaller in size. In this area, up to 40 No. 9 hooks are strung out on a single line. Instead of the $3\frac{3}{4}$ -pound pear-shaped lead, window sash weights are used as sinkers. A rather new apparatus in the fishery is the rubber shock or "rubber snubber". This device, molded of rubber with brass eyes on each end, is about 12 to 18 inches long. The swiveled end of the stainless steel line is attached to one end of the "rubber snubber" and a heavy duty (test) monofilament line with gangings (snoods), swivels, and hooks is secured to the opposite end. When fish take the baited hooks, the elasticity of the "rubber snubber" prevents sudden, strong tension on the line; consequently, fewer fish are lost from gear breakage or tearing loose from the hooks. Increased reliability is another advancement of today's gear; i.e., all lines, monofilament nylon and stainless steel, are fastened to accessories by a crimping process using a micro-press and sleeves.

Other advances in snapper gear have been in developing electric and gasoline powered reels, which were introduced in 1950 and 1952 by the Warren Fish Company and E.E. Saunders Fish Company. These reels were found to be effective in catching snapper. Because of high costs and complexity, however, these reels were soon found to be impractical and only a few were installed on boats. "Electric reels were used with considerable success" during Cruise No. 9 by the U.S. Fish and Wildlife Service exploratory vessel Oregon (R/V Oregon Cruise Report No. 9, 1951). Later, the Warren Fish Company introduced a simpler reel which consisted of a bicycle coaster brake and a large hand-drive wheel with stainless steel line (Camber, 1955) (fig. 7). In 1949, a fleet of 14

Figure 7.--Hand reel with bicycle coaster brake and a large hand-drive wheel.

Figure 8.--Direct-drive high speed hand reel.

red snapper vessels was equipped with high-speed manual reels of the direct drive type as seen in figure 8 (Siebenaler and Brady, 1952). With hand reels, which were relatively inexpensive and easy to install, fishermen could fish greater depths much faster than they could with handlines. As a result, catch rates increased considerably.

Most snapper vessels have changed from hand-

lines to manual reels with steel line, of the types seen in figures 7 and 9. Depending on the number of fishermen, each boat has 4 to 12 of these reels, which are mounted on steel posts along the starboard and port weather rails.

Although through the years handlines have been the traditional gear in taking snapper, continual efforts have been made to find more efficient gear and methods.

Figure 9.--Modified direct-drive high-speed hand reels of the type now used on most vessels.

Developments in this gear are as follows:

a. Cod gill nets that were brought from Boston in 1884 proved inefficient and impractical in the Gulf. Stearns (1885b) states--"the fishermen did not understand hauling them and were indifferent as to their success."

b. Longlines or trawllines were generally

unsuccessful in catching commercial quantities of snapper (Jarvis, 1935; Whiteleather and Brown, 1945). The ineffectiveness of this gear, in many instances, stemmed from inadequate materials, strong currents, and rough bottoms. As a result, considerable gear was damaged or lost. Jarvis (1935) believed that longlines may be more successful for catching grouper than snapper.

c. Hoop nets were tested and compared with handlines by Smith (1948). He found that with all factors being equal (except gear used) handlines caught more fish than hoop nets.

d. Fish traps of the type used in the West Indies were successful in catching commercial quantities of snapper. Jarvis (1935) states "that this apparatus can be used successfully, especially by chings fishing near shore." Experiments on the effectiveness of traps made

by the R/V Oregon showed trap capture rates to be low in comparison with handline fishing (R/V Oregon Cruise Report No. 9, 1951). Also, more recent trap tests by the Oregon in March 1964 were unsuccessful.

e. Modified otter trawls (fish trawls rigged with roller gear) have been tested on 21 cruises by the U.S. Fish and Wildlife Service exploratory vessels Silver Bay (fig. 10) and Oregon. Conclusions on the effective-

Figure 10.--Mixed catch of snapper, porgies, and triggerfish taken with modified otter trawl by BCF-chartered exploratory vessel Silver Bay.

ness of this gear by Captiva and Rivers (1960) are as follows:

1. Modified otter trawls can be used as effective commercial means of catching red snapper, grouper, and other species in the Gulf of Mexico.

2. Broken and rough bottom areas, previously considered untrawlable, can be worked economically with gear properly designed and constructed.

3. Additional species of marketable snapper, not generally caught with handlines, are available to trawl gear.

4. Release of undersize snapper is accomplished effectively by large mesh trawls and cod ends.

5. Daily trawl catches often surpass those of handline vessels when the two methods are used

simultaneously in one area—especially when the fish are apparently not feeding or during heavy seas.

6. Trawl gear, suitable for use by present Gulf of Mexico shrimp vessels, can be adopted by the industry either on a full-scale or as a supplementary operation during periods of low shrimp catches.

A commercial fisherman out of Pensacola demonstrated the commercial applicability of roller-rigged fish trawls for catching snapper. While fishing in 40 fathoms off Pensacola, he caught 500 to 1,500 pounds of fish per day. Catches were made in an area where handline operations were not producing fish. Recently, 8,000 pounds of snapper and grouper were taken in a 3-day period by this same fisherman. Several Florida trawlers are fishing with roller-rigged fish trawls. Five more trawlers are either being constructed or planned.

Figure 11.--Pile of fish accumulated on deck.

HANDLING AND MARKETING

Improvements in methods of handling snapper have been in eviscerating and carefully packing them in ice. In the past, snapper were often allowed to remain too long on deck and were not eviscerated, but packed round. Fishermen's erroneous objections to gutting fish were that gutted fish decomposed more rapidly. Gutting required too much time during the fishing operation, and gutted or dressed fish were hard to pack (Jarvis, 1935). Also, in the past, ice bins were often overloaded, and, as a result, pressure exerted on the fish prohibited air circulation and, therefore, the cooling effect, and many inferior or spoiled fish were brought in and unloaded at the fish house. With better handling methods, the quality of snapper is considered to be much improved. The fish are gutted and packed usually within an hour after they are landed. Fish are prevented from "drying out" on deck by dousing them regularly with water from either a bucket or a hose.

Since emphasis on quality of fish is stressed continually, more time is spent in the actual drawing and washing operation. Fish are prepared for drawing by making an incision toward the head on the lower side (almost vertically) between the pectoral and ventral fins and running the knife at an angle to the vent. Care is exercised in removing the viscera so that the white membrane (peritoneum) lining the abdominal cavity is not damaged (Jarvis, 1935).

Vessels fishing out of Texas have even a bigger job in cleaning their catch. Texas requires that all fish must not only be gutted but also gilled--the so-called G & G Law.

Upon accumulation of a good size pile of fish on deck, the fish are drawn and washed and tossed into the hold to be packed in ice (figs. 11 and 12). The first hand or icer, responsible for icing the fish, remains in the hold for considerable lengths of time, adding ice and stacking fish. About 6 inches of ice are shoveled into the bottom

Figure 12.--Fish being thrown into icebox.

of an icebox, then fish are added. Fish are stacked with their drawn sides down to permit drainage. Crushed ice, dispersed evenly to a 2-inch thickness, separates rows of fish. Usually, small fish (1 to 2 pounds) are stacked three and four layers deep before a layer of ice is added. Larger fish are stacked in only one or two layers, then ice is added. After an icebox has been filled or "topped off", a thicker layer of ice is added to the top and in the space between the shifting boards and the doors. If properly cared for, fish caught during the first part of a fishing trip can be kept in ice for 3 weeks and when unloaded will be

almost as fresh as fish taken during the latter part of the trip. If the vessel is still over the fishing area when fish are drawn, the entrails are not discarded overboard, but are retained in buckets so that sharks will not be attracted to the area.

In summer fish are re-iced three and four times a day, but during winter only one or two re-icings per day are required. The first hand's job is lightened somewhat now, because most vessels no longer carry block ice which must be chipped with a pick or chisel--they carry machine-crushed ice provided at the fish house. Ice is added to

Figure 13.--Fish being unloaded from vessel by large-capacity steel bucket.

the boxes by a blower system which is attached to the crusher. Many fish houses have their own plants in which they make ice.

It has been known for a long time that fish spoilage results from chemical decomposition and bacterial action. In the past few years many fish companies have made antiseptic ice by adding a bacteriostatic chemical to the water before freezing. (This chemical retards growth of bacteria.) Fish companies are discontinuing the use of antiseptic ice because they claim that little difference can be detected between fish packed with treated ice and those packed in untreated ice. Also, it seems that fishermen are relying on antiseptic ice alone to keep fish in a fresh condition, rather than on a combination of ice and

good handling techniques.

Only a few changes have been made in the overall processing operation in today's red snapper fishery as compared with processing methods of the past fishery.

Fish companies attempt to arrange vessel arrivals so that landings will be made about the time the fish supply on hand is exhausted. The arrivals, however, cannot always be scheduled properly and, subsequently, a glut may occur. Excess supplies of fish for which the producer does not have an immediate market are frozen and in most cases are sold within a week after storage.

At port, the catches are unloaded from fishing vessels by means of a large-capacity steel bucket (figs. 13 and 14). Each bucket is raised and lowered by an

Figure 14.--Fish being unloaded from hold of vessel.

electric hoist and when fully loaded weighs about 400 to 500 pounds. In the past, each bucket load of fish was weighed before it was unloaded and the weight was check-

ed by the fish house and a member of the vessel crew. Now, fish are not weighed at the beginning of the processing operation but after they have been sorted and graded.

Figure 15.--Fish being dumped into hopper.

Figure 16.--Fish leaving hopper on conveyor belt.

Unloading techniques used by various fish companies in transporting fish from vessels to the fish house are as follows:

a. Fish are dumped from the bucket to a chute and hopper system and then are moved into the fish house via a conveyor belt (figs. 15 and 16). As the fish move

along the belt, they are sorted and graded.

b. Fish are dumped directly from the bucket onto the dock adjoining the fish house. Then fish house employees pew or gaff the fish and separate them into baskets (fig. 17). The fish are pewed or gaffed only in the head.

Figure 17.--Fish being sorted and weighed.

The newer fish companies use the hopper and conveyor method for moving fish, while the older companies retain the old direct handling method.

Regardless of the unloading methods used, the fish are sorted and graded according to species, size, and quality and then are weighed on platform scales (fig. 17).

Figure 18.--Weight of catch being recorded by fisherman (left) and fish house employee (right).

A careful record of weights is kept by the fish house and by a fisherman representing the fishing vessel (fig. 18).

Inferior or spoiled fish are discarded; fish not in prime condition are headed and sold as "headless" fish. However, fish other than those of a lower quality are also headed; i.e., about half of all fish landed are shipped as headless fish. One of the greatest changes in processing

is that whole fish (uneviscerated) are no longer shipped. All fish, including grouper, are shipped drawn, drawn and gilled, or headless and drawn.

A considerable demand has been built up for tenderloins (steaks) and fillets. About 10 to 25 percent of all grouper landed are made into steaks. In addition, a small amount of grouper and snapper is cut as fillets.

Figure 19.--Heads being removed from snapper and grouper.

Steaks and fillets are packed and frozen in small lots with most being sold to restaurants, hotels, hospitals, and public institutions.

Fish houses differ in their ways of processing fish for shipment. Fish that are to be headed go to dressing tables where heads are removed with an axe (fig. 19)

or with an electric saw. Red snapper heads are then moved to another table where small pieces of flesh, roughly triangular in shape, are cut away from the side of the head. This meat, referred to as "snapper throats", actually is snapper cheeks and is said to be the richest and most delicately flavored part of the fish; it is sold in bulk

to some markets. Whole fish are either dumped into large tanks containing iced water (where they are washed) (fig. 20) or they are moved directly to the packing area. In the latter case, fish are washed while in the hopper before they enter the fish house.

Wooden boxes and barrels are used for shipping fish. In the past, barrels were used almost exclusively

and nearly all catches were shipped by rail express. The reasons barrels were preferred to boxes, as given by Jarvis (1935), are: "first, that most shipments are small and made to wayside stations, and undergo considerable rough handling before reaching the buyer. In such shipments barrels are said to be more easily handled and less liable to breakage en route. Expressmen are said to prefer

Figure 20.--Snappers being washed before they are packed in ice.

barrels for larger shipments because of ease of handling. Second, customers are said to request barrels, believing that the fish arrive in better condition with less meltage of ice. In the third place, barrels also have a reuse value

and are preferred by customers for this reason."

Now the trend is reversed. Most shipments (in excess of 75 percent of the production) are made by truck in 100-pound boxes (fig. 21). Some of the older companies

Figure 21.--Boxes of fish being loaded on truck.

continue to send snapper and grouper in barrels by express, mainly to the larger southern cities (fig. 22).

Most fish sales are made by telephone orders from customers in the larger northern and eastern cities. Shipments are sent via truck to distribution centers, such as Chicago, Detroit, Cleveland, St. Louis, Cincinnati, and New York. Although the snapper fishery is quite competitive, fish houses cooperate with one another in making arrangements whereby trucks owned or rented by a certain company will pick up and deliver fish for another company. This system is advantageous for both, since at times one company will not have a large enough supply of fish to

supply customers' needs. Also, trucks which are not fully loaded and are heading for certain cities will go out of their way to pick up fish from other companies that have orders for the same places. In addition to normal retail outlets, fresh fish are sold to independent fish merchants (commonly referred to as fish "peddlers"), who in turn distribute the fish to markets, public establishments, and individuals within about a hundred mile radius of the coast.

Boxes used for shipping snapper and grouper are the standard 100-pound capacity type. Crushed ice is shoveled into the bottom of the packing box, and the fish

Figure 22.--Barrels of fish being loaded on express truck for delivery to railroad.

are carefully packed by alternating heads and tails to secure an even layer. Crushed ice is added to separate layers of fish. After 100 pounds of fish are added, a heavy scoop of ice is placed on top (fig. 23). At one time, it was a practice to "top off" a box with a heavy block of ice. The box was then covered with burlap and wired down. Now, however, because of the expediency of truck delivery, block ice is not added and boxes are seldom covered. Snapper shipments made by truck reach their destinations in 1 to 2 days. If most of the ice melts en route, the driver repacks the boxes with crushed ice, which is carried in the truck.

Barrels used for shipping fish are usually of two sizes: the larger holds 200 pounds of fish and about 150 pounds of ice, the smaller holds 150 pounds of fish and about 100 pounds of ice. Barrels are packed by first placing a 20- to 25-pound block of ice on the bottom and then adding crushed ice to fill in around the block. Fish are packed in layers, in the same way as for boxes. Barrels are "topped off" by adding enough crushed ice to form a mound and then placing an ice chunk on top. Barrels are then covered with bonded burlap paper, which is held in place by wooden hoops that are tacked to make a tight fit. The burlap covers are secured so that expressmen can remove them when re-icings are required.

Figure 23.--Boxes of snappers being iced for shipment.

SPECIES TAKEN

Although commercial landings of snapper fleets do not consist entirely of the red snapper, Lutjanus aya (also called L. blackfordi and perhaps L. campechanus), this species is the predominant one taken (cover photo). Camber (1955) states, "Producers never separate red snappers according to species. As a result, the reported landings include not only the principal species (L. aya), but also other fish marketed as red snapper." The following species (arranged in order of importance) are caught in the Gulf and marketed as red snapper:

Lutjanus aya -- red snapper

Lutjanus vivanus -- yelloweye, golden eye, or silk snapper

Lutjanus analis -- mutton snapper or kingfish

Lutjanus synagris -- Lane or Mexican snapper

Lutjanus griseus -- mangrove or gray snapper

Lutjanus campechanus -- Caribbean red snapper

Lutjanus buccanella -- gunmouth, hambone, or blackfin snapper

Lutjanus apodus -- schoolmaster snapper

Rhomboplites aurorubens -- vermilion, mingo, or bastard snapper

Ocyurus chrysurus -- yellowtail snapper

Etelis oculatus -- queen snapper

Holocentrus ascensionis -- squirrel fish

Pristipomoides macrophthalmus -- wenchman

In addition to the above species, the deep sea wenchman (Pristipomoides andersoni) has been taken in large numbers off the Texas coast by the Bureau's exploratory vessel Oregon and probably is also taken by commercial handline vessels.

The red snapper is most abundant in 20 to 60 fathoms. The yelloweye snapper is the predominant species in 90 to 120 fathoms. The numbers of red snapper and yelloweye snapper appear to be more equally distributed in about 80 fathoms than in other depths (personal communications with snapper boat captains and fishermen).

Studies by Jarvis (1935) and Camber (1955) show that at least 90 percent of the total Gulf of Mexico snapper production throughout the years has been composed of red snapper, while grouper and additional forms of snapper (mainly yelloweye) constitute the remainder of the catches.

In addition to snappers, the Gulf of Mexico supports a large grouper fishery. Most groupers taken by snapper vessels are incidental to snapper catches and are considered a byproduct of the fishery; however, some vessels off the western coast of Florida fish only for grouper. The red grouper (Epinephelus morio) is the most important of the groupers because of its abundance and excellent flavor. Also, the black grouper (Mycteroperca bonaci) is commonly taken. Also marketed are other species of grouper, the speckled hind (Epinephelus drummondhayi), the yellowfin grouper (Mycteroperca venenosa),

the gag (Mycteroperca microlepis), and the scamp (Mycteroperca phenax). The scamp is considered by many to be the finest flavored fish of the group; however, it is taken in relatively small numbers and is usually reserved by the fishermen for their own use (Jarvis, 1935). Little is known of the life history and habits of red snapper and grouper. Numerous examinations of gonads indicate that the red snapper spawns between July and September and groupers spawn in early spring (Jarvis, 1935; Camber, 1955; Moe, 1963).

PRODUCTION

Because many factors have affected production of snapper and grouper, these fisheries have fluctuated tremendously since their beginning. As pointed out by Camber (1955), some of the non-biological factors that have affected production are market conditions, war, size and efficiency of the fishing fleet, labor-management relations, labor shortage, and weather.

Red snapper production increased continually from 1880 to 1902 and then apparently stabilized until 1929. Because of the economic depression from 1929 to 1935, catches declined sharply. From 1935 to 1939, a period of economic recovery, catches increased, but not to the predepression levels. Catches decreased again from 1939 to 1945 because of the disrupting effect of World War II. Catches began to increase after the war, and by 1952 production had again approached the 1929 level. Except for a few sporadic years, production increased continually from 1952 to 1963.

Statistics on red snapper and grouper have been collected since 1880 by the U.S. Bureau of Fisheries, the U.S. Fish and Wildlife Service, and the Bureau of Commercial Fisheries (table 1). From 1880 to 1963, the reported Gulf production of red snapper (round weight) has been 313 million pounds, valued at \$48 million, and the production of grouper has been 174 million pounds, valued at \$13 million. Statistics are, unfortunately, lacking for some extensive periods of years. Estimates of production for these years are provided, based on production in years immediately before and after the missing ones and on partial landings. I estimate that more than 612 million pounds of snapper and 239 million pounds of grouper, valued at \$67 million and \$19 million, respectively, have been taken. This is, roughly, a yearly average of 10 million pounds of both species, valued at \$1 million, for the past 83 years from the Gulf of Mexico, or a total of 853 million pounds worth over \$86 million. In 1963, 12,600,876 pounds of snapper were taken from the Gulf of Mexico. This production value almost reached the all time high. The best year for snapper production was in 1902. Alexander (1905) and Radcliffe (1921) reported 13,608,553 pounds and 13,995,660 pounds, respectively, for that period (Camber, 1955) (table 1).

Since the early 1900's, the Campeche Banks have been the most productive area for red snapper and also an excellent source for grouper. I estimate that 50 percent of the snapper, or more than 300 million pounds, valued at over \$30 million, of the total Gulf production has come from the Campeche Banks and coast of Mexico. This is an average of over 3.5 million pounds a year, valued at over \$350,000.

Table 1.--Total production of snapper and grouper by U.S. fishing vessels from the Gulf of Mexico for various years, 1880-1963

Snapper		Grouper		Snapper		Grouper			
Year	Weight	Value	Weight	Value	Year	Weight	Value	Weight	Value

1/ No data

Complete statistics of snapper and grouper landed from the Campeche Banks and off Mexico's coast have been collected by the U.S. Fish and Wildlife Service for the past 9 and 6 years, respectively (tables 2 and 3). An average of 43 percent of the snapper or 38,817,000 pounds, valued at \$9,859,000, and 10 percent of the grouper or 3,816,000 pounds, valued at \$195,000, of the total Gulf production for 1952-63 has come from the Campeche Banks and off the Mexican coast.

FLUCTUATION OF EFFORT ON THE CAMPECHE BANKS

For 1929-51, accurate records of the number of trips made to the Campeche Banks by each vessel is available for a portion of the total fleet. Camber (1955) presents data including the average number of trips to Campeche per month by 28 vessels owned by the Warren Fish and E.E. Saunders Fish Companies of Pensacola, and the Star Fish and Oyster Company of Mobile, during 1929-36 and 1938 (fig. 24). The effort decreased from an average high of 24 trips per month in March to an average low of 17 trips per month in September, and then increased again in October. Figure 25 also shows the average number of trips to Campeche made by 15 vessels owned by E.E. Saunders Fish Company during 1937 and 1939-51. Again, these data show that the Campeche Banks effort is high in March and low in September. Two reasons can be advanced for this pattern: First, hurricanes are most active in the Gulf of Mexico during fall, with September having most hurricanes. Therefore, vessels of any kind avoid getting too far away from home port during this time. Also, snapper and grouper fishing is good and can be done in favorable weather during summer, but during winter the weather is adverse and the northern Gulf is plagued with "Northers" (cold fronts which pass through with considerable velocity at times, causing hazards to unwary fishermen).

These factors tend to explain the concentration of effort on the Campeche Banks from October to April and the decrease in effort during the remaining months. It is evident that this general pattern of effort along the coast of Yucatan would apply to almost any period of years or any one year.

PRODUCTION PROBLEMS

Many problems that confronted the snapper industry in the past exist today, and more problems have arisen, some of which are as follows:

1. Production.-The old problem of catching sufficient quantities of snapper and grouper to make a worthwhile trip still exists. Although there has been considerable advancement in vessels and fishing equipment (diesel engines, depth recorders, radios, and electric and hand reels) during the last few years, the average vessel fare has decreased. Total production, of course, is greater than it was in previous years. The main reason for production declines per vessel is that the numerous vessels are exerting heavy pressure on snapper populations.

2. Production costs.-Operation and maintenance of snapper vessels are expensive. Also, construction

costs of new vessels are high. Since all work aboard vessels is done by hand, operations are slow and tedious.

3. Competition from other seafood products.-Production costs for other sea foods are usually much less than for snapper, so they are sold more cheaply at retail. The promotion of new types of sea foods has given consumers a wider variety, which competes with snappers. In the past, red snappers had much less competition. Sea food markets were generally localized in areas where catches were brought in and fish were sold in fresh condition. With development of modern refrigeration and new methods of processing, packaging, freezing, and canning, all types of sea foods are distributed nationwide.

4. Location and retainment of vessel captains. With the increased number of new snapper vessels in the Gulf, fish houses are experiencing difficulty in finding and retaining competent captains. In an effort to obtain captains, a type of competition which rarely existed in the early fishery is becoming quite common among fish houses today; i.e., companies continue to advance the attractiveness of employment with their company by offering the captaincy position to the better captains on the newer and better vessels. Also, some fish companies are having vessels constructed according to specifications of their captains within certain limitations, such as size and horsepower. Another problem facing the industry is an overall shortage of fishermen.

SUMMARY

The red snapper fishery in the Gulf of Mexico was started about 1850 off Pensacola, Fla. During early years, live-well vessels fished inside the 40-fathom curve between Mobile, Ala., and Cape St. George, Fla. As the fishery expanded it gradually exploited the grounds off Texas to the Rio Grande and the banks along the west coast of Florida to the Dry Tortugas. In 1890, vessels began to fish for snapper and grouper on the Campeche Banks. At first, efforts on the Banks were sporadic; however, by 1895 live-wells were abandoned when artificial ice became available at a reasonable price. The Campeche Banks became regularly fished with vessels constructed or modified to carry ice. Through the years, the Campeche Banks have remained the most important snapper grounds in the Gulf of Mexico.

From 1935 to 1955, only three to four boats were added to the snapper fleet; however, in the past few years, only a few vessels have been lost or retired and numerous modern vessels have been constructed. Consequently, the size of the commercial fleet has increased tremendously. More vessels were built in the past 12 months than in the previous 12 years; about 15 vessels are under construction.

From the masted schooners of early years, the red snapper fishery changed to vessels rigged with sail and powered with auxiliary gasoline engines. Later, diesel engines were introduced, and by 1945 most of the snapper fleet had transformed to diesel powered vessels.

Throughout the years, efforts have been made to find more efficient types of gear for taking snapper. Of the types of gear developed and tested, the modified otter trawl has proved to be the most promising method of capturing fish. Five trawlers which will be outfitted with roller-rigged fish trawls for snapper fishing are either under construction or in the planning stage.

Figure 24.--Seasonal fluctuations in number of trips per month to the Campeche Banks, 1929-36, 1938

Recent advances in fishing gear have included the introduction and use of power and hand driven reels and stainless steel lines, rather than the traditional cotton handlines of the past. Also, improvements have been made in terminal gear (hooks, swivels, and rubber shocks), and superior techniques were devised for fastening this gear to the mainline. In addition, accurate charts, depth recorders and electronic navigational aids have helped the fishery immensely.

The red snapper (*Lutjanus aya*) is the predominant snapper taken in the Gulf of Mexico. This species has contributed more than 90 percent of the total Gulf production throughout the years. Producers never separate fish according to species, and, as a result, about 13 species of snapper and other fish are marketed as red snapper. Species of snapper other than *L. aya* and about

six species of grouper make up the remaining 10 percent of the total production.

From 1880 to 1963, the total reported Gulf production of snapper and grouper was 313 and 174 million pounds, respectively. I estimate that total Gulf of Mexico production from 1880 to 1963 was more than 612 million pounds of snapper and more than 239 million pounds of grouper. In 1963, 12,600,676 pounds of snapper were taken from the gulf of Mexico. This production value almost reached the alltime high of over 13 million pounds caught in 1902. An average of 43 percent of the total Gulf production, or 38,817,000 pounds, was taken from the Campeche Banks and off the coast of Mexico during the past 9 years, while 10 percent or 3,816,000 pounds of grouper was produced from this area during the past 6 years.

Figure 25.--Seasonal fluctuations in number of trips per month to the Campeche Banks, 1937, 1939-51.

A primary problem facing the snapper industry is the high operation costs. Vessels used in the fishery are expensive to operate and maintain, and construction costs of new vessels are high. The red snapper fishery must also compete with other fisheries that produce fish for considerably less. Although the total catch is greater than in previous years because of the increased number of vessels fishing for snapper, the average catch per boat has decreased.

ACKNOWLEDGMENTS

Personnel of the U.S. Fish and Wildlife Service,

Bureau of Commercial Fisheries have provided advice and assistance. Ralph Horn and Howard Hults, owners of Clark Seafood Company in Pascagoula, the Gonzales Brothers, owners of the Star Fish and Oyster Company of Mobile, T.E. Welles, owner of the E.E. Saunders Fish Company of Pensacola, and Francis William Taylor, owner of Warren Fish Company of Pensacola, all cooperated. Vessel captains William Kolbush and Victor Williams and their crews gave me their cooperation, as did retired and active captains and fishermen from Pensacola, Mobile, Bayou La Batre, and Pascagoula.

MS #1436

August 10 2015

Dear Chairman Anson and Gulf Council members:

Thank you for the opportunity to address the council and a variety of issues facing gulf fishermen and their businesses. There continues to be a resistance to working together and moving towards realistic, meaningful solutions. Meanwhile, gulf fishermen, their businesses and their families are paying the price.

Our organization represents federally permitted charter captains and their customers across the Gulf of Mexico as well as across the country. We are the largest organization of federally permitted vessels in the region and have the following recommendations for the Council's consideration:

Amendment 39

The federally permitted charter fleet has made it abundantly clear that **we want to be excluded from Amendment 39 and see it proceed as a vehicle specifically for private anglers**. The charter for hire management Advisory Panel specifically requested to be removed from Amendment 39.

Under federal management, the charter for hire fleet has a clearly defined management system, recreational anglers without their own boats enjoy a secure level of access to these resources, and all components of the recreational sector have the opportunity to develop tailored management to fit meet their respective needs.

There are several reasons that the charter fleet does not want to be managed by the Gulf states, and very strongly want to remain under federal management:

- Currently, all 5 Gulf States have adopted inconsistent seasons to specifically appease their private anglers; these longer state seasons have directly harmed the charter industry because we cannot participate in them.
- 4 of the 5 Gulf States voted against the charter for hire fleet being recognized as their own entity under the federal management system despite the fact that charter vessels are held to a separate, and higher standard than the remainder of the recreational sector. We have no confidence that the states will recognize us as a separate sector under regional management.
- All 5 state representatives decided to bypass the stakeholders and established council system because they've been unhappy with the fruits of their own labor at the council level. They held a closed-door meeting to design a plan that codifies state management

and completely removes the ability of our industry and others to participate in the regulatory process. They have partnered with private angler interest groups (who have opposed us at every turn) to push this plan in the halls of Congress.

- The charter industry has reached out across state lines to develop a Gulf-wide vision for management that would give us more business stability, flexibility for our customers, and accountability for the resource – to lump us into a state management scheme would make this progress impossible.

Amendments 41 and Amendment 42

Both of the Advisory Panels associated with these amendments asked to be reconvened after August meeting to resume working and developing management for their industries. As demonstrated by the productive AP reports presented in June, the charter industry across the Gulf has engaged in good faith to solve management problems from the ground up. We see no legitimate reason at this time for the council to do anything but **proceed with exploring the options presented by Amendments 41 and 42**. We want all options on the table.

Amendment 28

Each of the items listed above have opportunity to actually improve fishing opportunities, data collection, and the stability of our business. We are concerned that Amendment 28 will set a destabilizing precedent, hurt the health of the stock in the Eastern Gulf where our captains are already seeing the signs of localized depletion, and unfairly punish the commercial sector for the delay to fix recreational management that has been perpetuated by the Council and NOAA.

At this time, we see no reason to shift or reallocate any quota from the commercial fishery to the recreational fishery as it will not yield any meaningful results for recreational fishermen. There is significantly more to gain from accountability and shrinking the current 20% buffer by eliminating management uncertainty in the recreational sector than any amount of allocation shift being considered. **We support moving forward With Alternative 1 - No Action. We also recommend moving alternative 9 to considered but rejected** because size selectivity is a reflection of a short-term change in fishermen behavior due to management changes and should not be used to justify a long-term change in allocation.

Gag Grouper

Based on the biological data, trends in the fishery and reports from our fishermen we would like to see the council take the most conservative approach for Gag Grouper ACL, **Action 1 Alternative 1** while removing the December season closure (**Action 2 Alternative 2**). During a low effort time of year, fishermen need the opportunity to harvest these fish if the quota allows for it. We also don't need to be forced to unnecessarily discard a legal sized fish when quota is available.

Gray Triggerfish

Based on reports from Eastern Gulf fishermen, the Gray Triggerfish population is experiencing serious issues and needs to be addressed quickly through a framework amendment starting in October. The stock assessment data should be presented at the October meeting and we expect it to confirm our observations on the water. **We recommend taking a cautious approach moving forward and would like to see council staff present options including but not limited to a split season approach, considers increased minimum size lengths, and bag limit analysis on season lengths.**

Electronic Logbooks

This tool is a critically important part of providing data for managers and developing more accountable management measures. If properly implemented, and paired with proper management it should lead to reduced management uncertainty and to harvest of fish that are currently held back in the buffer. We are ready to move forward with ELB development and ask the council and NOAA to accelerate this improvement for the federally permitted charter fleet.

Sincerely,

Shane Cantrell, Executive Director
Charter Fisherman's Association

Subject: Oppose the Red Snapper Reallocation Scheme (Amendment 28)

Date: Sunday, August 9, 2015 3:24:43 PM Eastern Daylight Time

From: carol faga

To: Gulf Council

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Dear Governor and Gulf Council Members:

I work in these restaurants along the Gulf of Mexico and we serve SO MANY people fresh caught fish. A new special every night. And, I am proud to say we get it locally, caught by local fisherman. I KNOW captains and crew and their families who DEPEND on this industry. OUR whole lives are centered around our capability to say we have local fresh catches. People can stay in their own states to get mass produced, farm raised, imported seafood. Please do not kill my career and kill our economy.

From: Charlene Ponce

To: Charlene Ponce

Good Morning,

Kudos to the ***Florida Restaurant and Lodging Association*** for supporting fairness in the allocation of Gulf of Mexico red snapper.

Texas and Louisiana fishery leaders are the primary movers to remove commercial fishing of red snapper which means **NO RED SNAPPER FOR RESTAURANTS or at retail for home consumption.**

The commercial fishermen are mandated to count every red snapper landed. The angler lobbyists would like everyone to think that "a granddaddy and his grandson just want to catch a red snapper or two for supper."

Pure heifer dust. Texas has had a year round red snapper open season for years and its anyone's guess how many red snapper are caught and if any law enforcement takes place outside the 9 mile state water line.

A federal judge has already ruled once that what the anglers are trying to do does not comply with the Magnuson-Stevens Act. Do the red snapper fishermen have to go back to the same judge if the Council votes to punish only those who cannot catch their own red snapper?

The anglers over fish their total allocation annually in the millions of pounds. They will not accept accountability for what they take. Shouldn't accountability in that sector be the first order of business for the Council?

Hopefully the members of the Gulf of Mexico Fishery Management Council, sworn to be fair and equitable in all matters, will not take red snapper from the only user group that accounts for every red snapper harvested.

Cheers.

Bob Jones

Subject: Oppose the Red Snapper Reallocation Scheme (Amendment 28)

Date: Thursday, August 6, 2015 4:58:44 PM Eastern Daylight Time

From: Denise Hunter

To: Gulf Council

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Subject: Oppose the Red Snapper Reallocation Scheme (Amendment 28)

Date: Thursday, August 6, 2015 2:08:24 AM Eastern Daylight Time

From: Aaron Fruge

To: Gulf Council

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

From: Yasamin Sharifi

To: Gulf Council

Dear Governor Scott and Gulf Council Members:

As your constituent and a student of Yale University, I am writing to express my concern regarding Amendment 28.

"Amendment 28" would hurt small businesses and families along the Gulf coast by shifting sustainably caught Red Snapper to purely recreational fishing. Some versions of the proposal could cut more than one million pounds of popular red snapper from the sustainable consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change, as it will likely only extend the season by one day. However, it will take millions of consumer meals off the market and harms family businesses like mine across the Gulf coast. It is poor economics and poor conservation policy as the commercial sector has been 100% sustainable since 2008 and helped red snapper rebound from the brink of collapse just a few years ago.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the local seafood industry, consumers, and conservation efforts.

Thank you for your attention to this pressing matter.

Subject: Oppose the Red Snapper Reallocation Scheme (Amendment 28)

Date: Wednesday, August 5, 2015 4:24:25 PM Eastern Daylight Time

From: Virginia Hitchcock

To: Gulf Council

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than 1 million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair, and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Thank you for hearing my voice.

Date: Wednesday, August 5, 2015 2:28:08 PM Eastern Daylight Time
From: alex vlahodimitropoulos
To: Gulf Council

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

To: Gulf Council

Dear Governor and Gulf Council Members:

"Amendment 28" seems to me to be another government plan that sounded good to those in power listening to just one special-interest group, but it doesn't consider everyone. Please do not change things unless you can give honest evidence that everyone will benefit.

Recreational fishing is a business in Florida, but seems to be getting more consideration than the smaller seafood businesses and us families along our Gulf coast.

Please oppose Amendment 28. I find it hard to believe that none of you are wise enough to come up with a better plan to help recreational fishermen without hurting the rest of us.

Sincerely,
Lynnette O. Edwards

Subject: Oppose the Red Snapper Reallocation Scheme (Amendment 28)
Date: Wednesday, August 5, 2015 12:37:04 PM Eastern Daylight Time
From: Jana Barksdale
To: Gulf Council

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Subject: Oppose the Red Snapper Reallocation Scheme (Amendment 28)

Date: Wednesday, August 5, 2015 10:49:34 AM Eastern Daylight Time

From: amanda osborne

To: Gulf Council

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

As a recreational fisherwoman, I would like to see that the commercial fisherman also have fair access to red snapper in order to continue to see its availability on local restaurant menus and in local markets for a reasonable price for Florida families to enjoy. Thank you for taking the time to listen.

Sincere regards,

Cara Morales

To: Gulf Council

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

To: Gulf Council

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

To: Gulf Council

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Date: Wednesday, August 5, 2015 9:19:36 AM Eastern Daylight Time

From: Mary Robbin Jones

To: Gulf Council

Dear Governor and Gulf Council Members:

I am writing you to try to stop "Amendment 28." This amendment will undermine years of good conservation and management work that brought snapper back after years of over fishing. Our reckless past almost destroyed the Gulf snapper until sensible measures were put in place to limit and allocate the snapper that could be caught while allowing the population to increase. It worked beautifully.

I remember going with my parents as a child to fish for snapper at the "Flower Gardens" off Port Bolivar. The trip was long to get to there, but the peaceful fishing and the thrill of that first beauty brought on board, promising a great supper, is something I will always remember. And I would like my 4 grandchildren to have that same experience.

The only way to do that is to continue the practices that brought back our snapper. A promise of one more day of fishing is not worth the risk to our snapper or the small businesses that rely on these regulations to protect the snapper and their businesses

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high. And it is virtually unenforceable. It is always better to regulate the action of business which are much easier to track. And they have a vested interest in seeing that the fish stock continues at its present levels or increases. I suggest that you listen to the people who put together the rules that brought the snapper back, not the voices of people who have no knowledge or expertise in maintaining fishing stocks.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the fish populations, seafood industry and consumers.

As my mother always said, "if it ain't broke, don't fix it."

Subject: Oppose the Red Snapper Reallocation Scheme (Amendment 28)
Date: Wednesday, August 5, 2015 9:07:15 AM Eastern Daylight Time
From: Keith Rick II
To: Gulf Council

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

As a person who has grown up fishing in the gulf almost my entire life and a retiree from the Auburn University fisheries dept, I urge you to not settle for this temporary non solution! This is not the way to go and will create an adversarial relationship among fishermen and with those charged with enforcing this bad idea.

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

From: Lindsey Prince

To: Gulf Council

Dear Governor Abbott and Gulf Council Members:

I do not totally agree with proposed Amendment 28 relating to red snapper fishing along the gulf coast. As I read it, the amendment would eliminate a substantial amount of red snapper from reaching consumers and pushing prices at the marketplace higher.

Please oppose Amendment 28 and help to seek better solutions for recreational fishermen, the seafood industry and consumers.

Thanks for your time,
Lindsey Prince

Dear Governor and Gulf Council Members:

Respectfully, "Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. David West

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

Commercial fishing should end until the stock has totally ended.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. charles bartley

To the Honorable Bobby Jindal and Gulf of Mexico Fishery Management Council,

I beg of you to oppose amendment 28, for it will rob life-long Louisiana fishermen and coastal families of the lives and livelihoods they've come to know, love, and depend upon.

REJECT AMENDMENT 28.

Respectfully,

Cami Ryan

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

As a consumer, fish still makes it to the marketplace but, instead of being caught by honest, American fisherman, the fish is caught in Mexican waters and held for weeks on boats, or shipped to the US from fish farms that are unregulated. Feed is questionable, medications such as antibiotics, are used, and the fish are raised in deplorable conditions. Unfortunately, consumers will buy what is sent to the stores and the stores will restock with fish raised or caught under questionable circumstances.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Dear Governor and Gulf Council Members:

Although I will admit I haven't thoroughly read about this controversial issue, as long as commercial fishing is done environmentally effectively (i.e., powerful efforts to protect other marine life), I strongly believe "Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Dear Governor and Gulf Council Members:

I grew up in a small town close to Galveston and knew a number of families whose livelihood was fishing and shrimping. Very hard workers and good to my small town. Don't take this away from generations of good families. Keep available local employment so they can earn livings on our Gulf. I support all our local fish and seafood. It is LOCAL and what I buy only. Do not let these good people lose their hard earned great jobs that is their livelihood.

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

Date: Wednesday, August 5, 2015 9:50:45 AM Eastern Daylight Time
From: kenny guillotte
To: Gulf Council
Category:

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Dear Governor and Gulf Council Members:

It appears that small businesses are major targets for big business interests. How are individual citizens supposed to "rise" when all avenues are closed to them by greedy "people" (corporations) interested only in profits? PLEASE begin to think more about individual citizens who trust you to do what is best for ALL, not profit-driven share-holder candidate-buying corporations! America is fast becoming a nation comprised of very wealthy and very poor...with middle class citizens being driven down by such actions as this amendment!!

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Gov. Bentley, I know as a family man you are very aware of providing for your family and loved ones so please follow what you know is right and oppose this Amendment 28 and allow the people, businesses, etc... to provide for their families as well.

Thanks for your listening to the voice of the people of this great state that you are so blessed to be leading right now.

Roger

Category:

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I have seen an increase in Red Snapper.
I fish and I vote !

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. Don Herbert

Dear Governor and Gulf Council Members:

Where is the largest economic gain from 1 lb of snapper? To the vast number of visitors who come to our state to vacation, and possibly move here. There has to be a bigger economic gain from the 97% people who depend on a sustainable resource, that is in fact in better shape now than at any recent time in history. I can't be sure of the exact ratio of recreational/commercial, but for the sake of argument say it is 5000/1. Is it rational to think that a small adjustment in the percentage would really impact how many fishing days a recreational might go? I think not. I stand amazed that this is even in consideration to change the percentage of the TAC for a minute section of the population. Better to give them a reasonable first catch first kept red snapper allowance that would allow them to have a good day's trip, have some fish to eat, and not deprive the public of their resource. Do we tell the cow farmer he has too many cows we'll take some out of his herd so every family can have one? No we go to anything from a steakhouse to Mc Donald's to eat. What a shame if they didn't have any domestic beef to sell. Perhaps this is far fetched, but it does serve to make a point. A commercial fisher does not own anything he catches. In fact, well known to all in the Council, and perhaps you Governor, a commercial fisher can not do what John Public does, That is keep a snapper to take home, unless he takes it out of the public's share. There has to be a better way for recreational fishermen to have a good day's fishing, while not impacting both the public and those who provide them with fresh caught red snapper.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Miss Yaritza Roman

2203 N Lois Ave.
Tampa, FL 33607

Re: Escambia County Resolution R2015-96

Dear Chairman Anson:

Enclosed, pursuant to Section 3 of the Resolution, is a copy of Resolution R2015-96, *A Resolution of the Board of County Commissioners of Escambia County, Florida, Supporting Specific Alternatives within Amendment 28 to the Magnuson-Stevens Fishery Conservation and Management Act Regarding Gulf of Mexico Red Snapper Fishery; Providing for an Effective Date*, as adopted by the Board of County Commissioners of Escambia County, Florida, on July 7, 2015.

If you have any questions, please contact the Clerk to the Board's Office at 595-3920.

Sincerely,

Pam Childers

Clerk of the Circuit Court and Comptroller

PC/krm

Enclosure

A RESOLUTION OF THE BOARD OF COUNTY COMMISSIONERS OF ESCAMBIA COUNTY, FLORIDA, SUPPORTING SPECIFIC ALTERNATIVES WITHIN AMENDMENT 28 TO THE MAGNUSON-STEVENS FISHERY CONSERVATION AND MANAGEMENT ACT REGARDING GULF OF MEXICO RED SNAPPER FISHERY; PROVIDING FOR AN EFFECTIVE DATE.

WHEREAS, marine recreational fisheries are vital components of a healthy food supply, recreation, and quality of life for the citizens of Escambia County; and

WHEREAS, marine recreational fisheries provide renewable resources capable of sustainable production, while providing extractive and consumptive uses; and

WHEREAS, National Marine Fisheries Service regulate recreational fishing in waters off Escambia County, Florida; and

WHEREAS, Amendment 28 to the Magnuson -Stevens Fishery Conservation and Management Act examines the reallocation of red snapper resources between the commercial and recreational sectors to increase the net benefits from red snapper fishing and increase the stability of the red snapper component of the reef fish fishery while achieving optimal yield; and

WHEREAS, Amendment 28 also aims to consider buffers and payback provisions as additional recreational accountability measures for the recreational red snapper sector that will support management efforts to maintain landings within the recreational quota and mitigate quota overages, should they occur; and

WHEREAS, the Board of County Commissioners finds it is in the best interest of the health, safety, and welfare of the citizens of Escambia County that the county support Amendment 28, Action 1: Allocation Alternative 6, which will allocate 100% of the amount in excess of 9.12 million pounds to the recreational sector; and

WHEREAS, the Board of County Commissioners finds it is in the best interest of the health, safety, and welfare of the citizens of Escambia County that the county support Amendment 28, Action 2.1: Annual Catch Target Alternative 2, which uses a 20% buffer to the recreational red snapper quota based on the Annual Catch Limit/Annual Catch Target control rule; and

WHEREAS, the Board of County Commissioners finds it is in the best interest of the health, safety, and welfare of the citizens of Escambia County that the county support Amendment 28, Action 2.2: Recreational Overage Quota Adjustments Alternative 1, No Action, no payback provisions for quota overages.

Verified By: *K. McCord*
Date: *8/3/15*

NOW THEREFORE, BE IT RESOLVED BY THE BOARD OF COUNTY COMMISSIONERS OF ESCAMBIA COUNTY, FLORIDA AS FOLLOWS:

Section 1. That the Board of County Commissioners finds the true and correct and incorporated herein by reference.

Section 2. That the Escambia County Board of County Commissioners supports the following Alternatives within Amendment 28:

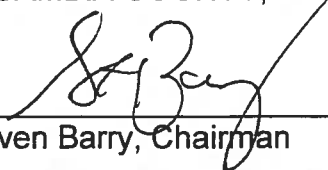

- a. Amendment 28, Action 1: Support Allocation Alternative 6, which will allocate 100% of the amount in excess of 9.12 million pounds to the recreational sector;
- b. Amendment 28, Action 2.1: Support Annual Catch Target Alternative 2, which uses a 20% buffer to the recreational red snapper quota based on the Annual Catch Limit/Annual Catch Target control rule;
- c. Amendment 28, Action 2.2: Support Recreational Overage Quota Adjustments Alternative 1, No Action, no payback provisions for quota overages.

Section 3. That the Escambia County Board of County Commissioners hereby directs the Clerk forward a copy of this resolution to Mr. Kevin Anson, Chairman, Gulf of Mexico Fishery Management Council, 2203 North Lois Avenue, Suite 1100, Tampa, Florida 33607 USA.

Section 4. That this resolution shall take effect immediately upon adoption by the Board of County Commissioners.

ADOPTED this 7th day of July 2015.

BOARD OF COUNTY COMMISSIONERS
ESCAMBIA COUNTY, FLORIDA

Steven Barry, Chairman

ATTEST: Pam Childers
Clerk of the Circuit Court

By: 

Deputy Clerk

Approved as to form and legal
sufficiency.

By/Title: 
Date: 7-28-2015

Date Executed

7/31/2015

To Whom It May Concern:
I oppose red snapper reallocation through Reef Fish Amendment 28. Status Quo (No Action) is the only alternative I can support.

- Commercial fishermen have stayed within their annual catch limit every year while recreational fishermen have exceeded theirs in 6 of the last 7 years.
- Commercial fishermen have worked hard to promote conservation in order to help the red snapper population recover. Reallocation does not promote conservation and may actually hurt the red snapper population.
- Reallocation will not solve the problems of the recreational fishery and, in fact, will only make them worse. Reallocation will hurt commercial fishermen and take red snapper off the plates of the American consumer.

It's time the Council followed the law and gave recreational fishermen the right tools to manage their fishery properly. Taking quota away from commercial fishermen is not a solution. Thank you for the opportunity to comment.

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Dear Governor and Gulf Council Members:

Vote no to Amendment 28, The commercial quota furnishes fish for the Nation. The majority of the Nation deserves a fair share of the resource. 51/49 is a fair spit.

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

From: Steve Hardy

To: Gulf Council

Dear Governor and Gulf Council Members:

"Amendment 28" would begin to build some sanity back into the management of Red Snapper in the Gulf of Mexico. Instead of lining the pockets of less than 300 commercial share holders, it will make more fish available for recreational anglers--the backbone of the local fishing communities.

Ultimately, management of Red Snapper and other fisheries should follow the American tradition of eliminating commercial interest from the field entirely. Remember, it was commercial hunting that drove the passenger pigeon to extinction, and nearly drove the American Bison to extinction as well. The management model to follow is the North American Waterfowl plan where all commercial interest is eliminated and recreational interests pay for habitat restoration and wildlife management through license and excise tax fees. Today, Commercial interest are cashing in on the resource and contributing nothing in return. They paid zero for millions of dollars in windfall profits and now greed is driving them to cling to every vestige of the patronage game.

Don't fall for the false claims of 10's of thousands of constituents that support the commercial interests--the only supporters of the commercial system are the profiteers lining their pockets at the expense of everyone else.

Please support Amendment 28 as a beginning point in righting the wrongs promulgated by the Gulf Council. It is not enough, but it is a start in the right direction.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Please do not take the commercial red snapper allocation and hand it over to the recreational sector. The CCA has convinced the Gulf Council that reallocation will give the recreational sector more days to fish. This is simply not true. Reallocation will not give recreational fishermen a stable fishing season. On the contrary, here's just a small sample of what reallocation will do... and it's not good:

- 1) Hurt fishing businesses that support the nation.
- 2) Disrupt the seafood supply chain and access to red snapper by all consumers.
- 3) Take red snapper off the plates of the 97% of Americans who want to enjoy red snapper but can't go catch it themselves.
- 4) Undermine the work the commercial sector has done to help rebuild red snapper population.
- 5) NOT prevent recreational overharvesting.
- 6) Hurt the red snapper population in the long run by increasing effort in the eastern Gulf where the population is most vulnerable.
- 7) Unfairly penalize commercial fishermen for staying within their quota while the recreational sector went over their quota in 21 of 23 years (between 1991 and 2013) by over 18 million pounds.
- 8) Cause the very problem recreational fishermen are facing – instability and uncertainty that prevents them from planning for their fishing year.
- 9) Set a dangerous and very real precedent for taking away commercial red grouper, gag, shallow and deepwater grouper, and tilefish quotas.
- 10) Sets a dangerous and very real precedent for taking away charter opportunities in order to "solve" private angler problems, or taking away commercial crab/lobster tags to hand over to the recreational fishery.

I strongly support Amendment 28 Alternative 1 (No Action) because reallocation is not the solution.

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Miss Molly Tolliver

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Dr. Bob Encinosa

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Subject: Red Snapper

Date: Thursday, July 30, 2015 3:07:58 PM Eastern Daylight Time

From: Steve Rash

To: Gulf Council

CC: rick.scott@eog.myflorida.com

My name is Steven Rash and I own Water Street Seafood, Inc. in Apalachicola. I employ over two hundred people in the fishing and seafood processing industry. Reallocation of Red Snapper from the commercial sector to the recreational sector will have a very negative impact on my business and will cause the loss of a large amount of jobs. The commercial sector has fished responsibly and under strict accountability measures for years while the recreational sector has fished irresponsibly and with little accountability. Red snapper provides a significant contribution to our economy in the form of jobs and commerce through the entire supply chain from the fishermen to the restaurant or retailer that provides American consumers with this natural resource. It would be unfair to deny American consumers access to this resource for the benefit of recreational fishermen who have resisted any form of accountability and who have drastically over fished their sector's quota for years and years with no consequences.

The Gulf Council should take a hard look at the Red Snapper quota and even closer look at the regulatory discard mortality in all sectors and revise the ABC to greatly reduce the huge waste in this fishery. We are all committing a crime against nature by wasting such a valuable resource.

Sincerely,
Steven Rash
President
Water Street Seafood, Inc.

In regards to the Red Snapper ABC for this year for the Recs ..I hope that all of you will be voting for the 14.3 mi/pds for the ABC. I assume that that will be coming to a vote soon and hope that we can all agree that the RS are rebuilding at a much faster pace than anticipated and more should be brought to the table. In my opinion it will help the other species as well. Thanks

Thanks,

Subject: Red Snapper Reallocation

Date: Thursday, July 30, 2015 11:52:18 AM Eastern Daylight Time

From: Carolyn Wood

To: Gulf Council

Dear Gulf Council,

Do not take the commercial red snapper allocation and hand it over to the recreational sector. The CCA has convinced you that reallocation will give the recreational sector more days to fish. This is simply not true. Reallocation will not give recreational fishermen a stable fishing season. On the contrary, here's just a small sample of what reallocation *will* do... and it's not good:

- **Hurt fishing businesses that support the nation.**
- **Disrupt the seafood supply chain and access to red snapper by all consumers.**
- **Take red snapper off the plates of the 97% of Americans who want to enjoy red snapper but can't go catch it themselves.**
- **Undermine the work the commercial sector has done to help rebuild red snapper population.**
- **NOT prevent recreational overharvesting.**
- **Hurt the red snapper population in the long run by increasing effort in the eastern Gulf where the population is most vulnerable.**
- **Unfairly penalize commercial fishermen for staying within their quota while the recreational sector went over their quota in 21 of 23 years (between 1991 and 2013) by over 18 million pounds.**
- **Cause the very problem recreational fishermen are facing – instability and uncertainty that prevents them from planning for their fishing year.**
- **Set a dangerous and very real precedent for taking away commercial red grouper, gag, shallow, deep, and tilefish quotas.**
- **Sets a dangerous and very real precedent for taking away charter opportunities in order to “solve” private angler problems, or taking away commercial crab/lobster tags to hand over to the recreational fishery.**

I strongly support Amendment 28 Alternative 1 (No Action) because reallocation is not the solution.

Carolyn F. Wood

Subject: Charter Fisherman's Association Comment on Amendment 28

Date: Tuesday, July 28, 2015 10:39:24 AM Eastern Daylight Time

From: andrew cantrell

To: Gulf Council

Please see attached comments from the Charter Fisherman's Association on Amendment 28 and add to the administrative record.

Thank You.

July 28, 2015

The Charter Fisherman's Association respectfully requests that the Gulf of Mexico Fishery Management Council (Gulf Council) adopt Action 1, Alternative 1 when finalizing, passing and implementing Reef Fish Amendment 28 to the Fishery Management Plan for the Reef Fish Resources of the Gulf of Mexico (Amendment 28).

As the largest federally permitted charter boat association in the Gulf of Mexico, the Charter Fisherman's Association appreciates the opportunity to provide comment on Reef Fish Amendment 28 of the Gulf Council. Our membership includes a large number of dually permitted vessels, holding federal permits for both charter/Headboat and commercial fishing, and this amendment would cause undue economic harm on these federally permitted commercial businesses.

The proposed reef fish amendment 28 would destabilize the seafood supply chain and create unnecessary instability on the fragile small businesses within our organization by removing fish from the commercial sector of the Red Snapper fishery. With respect to the Recreational sector of the fishery, there are no meaningful or significant impacts to be gained in terms of fishing days or season lengths by recreational fishermen.

As it stands, the most effective way to increase season lengths and fishing days for the entire recreational sector would be through management changes or increased accountability. The Charter for-hire component of the recreational fishery is on the path to both of these improvements and the council is in the early development stages for the private angler component. Through increased accountability and proper management, each segment of the recreational fishery could experience longer seasons and more fishing days with a reduced buffer on the recreational Annual Catch Target. These gains far surpass any perceived gains from reallocating quota from the fully accountable, hard working American commercial fishermen.

Sincerely,

Shane Cantrell, Executive Director
Charter Fisherman's Association

From: Natalia Miller

To: Gulf Council

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Subject: Oppose the Red Snapper Reallocation Scheme (Amendment 28)

Date: Tuesday, July 28, 2015 7:47:56 AM Eastern Daylight Time

From: Bettye Tyner

To: Gulf Council

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. Travis Ake

If we change the allocation we will open up a nightmare with regard to law enforcement. The commercial sector is heavily regulated with transponders, trip plans, catch reports. These are easy to track opposed to tracking the numerous boats in the recreational fishing effort. Many of which have no regards for the law, seasons or creel limits.

Dear Governor and Gulf Council Members:

I am asking you NOT to support Amendment 28. This legislation is not in the best interest of consumer; taking away a large part of the red snapper harvest solely for the enjoyment of recreational fisherman seems very lopsided. In addition to making red snapper more expensive for the consumer, this amendment small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Category:

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Date: Monday, July 27, 2015 2:20:19 PM Eastern Daylight Time
From: nan gold
To: Gulf Council
Category:

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Dear Governor Scott,

I DO NOT OPPOSE Amendment 28 and hope that the Gulf Coast Council implements other standards with regard to off-shore fishing in order to protect our natural resources and allow our coastal waters to once again flourish with marine wildlife. I find it disgusting that the Resorts World Bimini corporation dredged some 385 thousand cubic yards of sea bed, thus destroying the surround coral reefs simply to create a pier to allow passengers to come and go as they please.

We need to stop big corporations from destroying our natural habitats before it is too late! I URGE you and the council to start putting legislation through that prevents over-fishing and helps protect coral reefs and other natural resources in Florida. I am a native to Fort Lauderdale. I was born and raised here. I was brought up with the idea that our coral reefs and natural habitats are important to the sustainability of our way of life! PLEASE make appropriate laws and pass legislation to help protect these habitats! Man is the ONLY problem on this planet and these animals cannot save themselves!

Thank you,
Cody S.

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

As an avid saltwater fisher and scuba diver I have seen the decline of our Gulf in the last 13 years. When new bridges are built, such as the Sanibel Causeway, the underwater reef system that had grown around the old bridge bases was destroyed as it was relocated many miles off-shore where Scuba divers are unable to enjoy! A beautiful dive site that people could easily reach was destroyed and since then the river water has been so cloudy that a diver can barely see two feet in front of themselves. The reef used to filter and use the water for nourishment- now it's standing cloudy and the reef is gone.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. Shawn Adams

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

To: Gulf Council

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Date: Monday, July 27, 2015 5:12:16 PM Eastern Daylight Time

From: R. Scott Childress

To: Gulf Council

Dear Governor and Gulf Council Members:

My name is Scott Childress and I have been a commercial fisherman for 9 years. I run a small fishing business, G & S Fishing, LLC, out of Hudson, Florida. I have one boat and I employ five people. My business directly impacts six fishing families including my own. I have been involved in the management aspect of our fishery for many years and have attended Gulf Council meetings, FWC meetings, and various fisheries work shops. I am also a recent attendee of the Marine Resource Education Program Science Workshop which was held at the FWC's Fish and Wildlife Institute in St. Petersburg. I am not just some fisherman sending a form letter that does not know what is happening in our fishery. I have tried to educate myself in order to be able to make informed and knowledgeable decisions about issues regarding the management of our incredible resource. I can, without a doubt, tell you that it is a bad idea to reallocate more of a fishery to a sector of the fishery that is unaccountable, period!

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Here are just a few reasons why reallocation is bad and you should not support it:

Commercial fishermen like myself have spent years building stable business plans.

Taking quota away from us destabilizes our businesses and opens the door for a constant reshuffling of the deck. This would not be good for a mom-and-pop coffee shop or a small family ice cream store, so why would it be good for a commercial fishing business?

Hurting commercial businesses to pretend to help extend recreational fishing seasons is disingenuous and not fair. The FWC and the Gulf Council should be working on finding solutions that help everyone, rather than hurting one group of people to help another.

The Gulf Council went on the record saying that they want to develop a committee of private recreational anglers to start coming up with ideas to fix the recreational fishery. This is great news. Since taking quota from commercial fishermen won't help extend the federal red snapper season, let's put this issue to bed and focus on making sure this new Committee finds some real solutions.

The analysis of Amendment 28 shows that taking quota from commercial fishermen and giving it to the recreational sector will actually hurt the red snapper population and could lower quotas for everyone in the future. There are more red snapper in the Gulf now than there have been in years, and we can't afford to go backwards again.

Recreational fishermen have gone over their red snapper quotas by 18 million pounds in the last few years. We don't blame recreational fishermen for this, we blame the Gulf Council and NMFS for not giving recreational fishermen a better management plan.

I don't believe we should take quota from commercial fishermen because the Gulf Council and NMFS failed to manage the recreational fishery properly.

I am not aware of a single commercial red snapper fisherman in the Gulf of Mexico that supports reallocation. More than 95% of the charter fishermen that have come to the Council meetings and spoken up on this issue oppose reallocation. Even people in the seafood supply chain (fish houses, restaurant associations, and seafood consumers) have spoken up and written letters they oppose reallocation.

From one businessman to another, I urge you - please do not support reallocation.

Thank you for taking the time to read and consider my comments.

Respectfully,

R. Scott Childress

To: Gulf Council

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

As a seafood loving consumer, I oppose this amendment and urge you to do the same.

Subject: Oppose the Red Snapper Reallocation Scheme (Amendment 28)

Date: Monday, July 27, 2015 3:34:34 PM Eastern Daylight Time

From: Joe Mecus

To: Gulf Council

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Subject: Oppose the Red Snapper Reallocation Scheme (Amendment 28)

Date: Monday, July 27, 2015 2:41:10 PM Eastern Daylight Time

From: Bob Brucker

To: Gulf Council

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Bob Brucker

Subject: Oppose the Red Snapper Reallocation Scheme (Amendment 28)

Date: Monday, July 27, 2015 2:18:43 PM Eastern Daylight Time

From: Cathy Sikes

To: Gulf Council

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Date: Monday, July 27, 2015 2:18:05 PM Eastern Daylight Time

From: Harry Lowenburg

To: Gulf Council

Dear Governor and Gulf Council Members:

Red Snapper is a success story for good fishery management. Now we have lots of young snapper, but they have not reached anywhere near spawning potential. We need to continue to manage this resource for sustainability.

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

From: Mary Moore
To: Gulf Council

Dear Governor and Gulf Council Members:

Amendment 28 would be detrimental to small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

Amendment 28 would minimally benefit recreational fishermen, who will not experience long-term stability or significantly longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Subject: Oppose the Red Snapper Reallocation Scheme (Amendment 28)

Date: Monday, July 27, 2015 1:22:56 PM Eastern Daylight Time

From: kristina lamons

To: Gulf Council

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Subject: Oppose the Red Snapper Reallocation Scheme (Amendment 28)

Date: Monday, July 27, 2015 1:03:06 PM Eastern Daylight Time

From: Carol Stokrocki

To: Gulf Council

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Subject: Oppose the Red Snapper Reallocation Scheme (Amendment 28)

Date: Monday, July 27, 2015 12:50:53 PM Eastern Daylight Time

From: Charlie Day

To: Gulf Council

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

To: Gulf Council

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. robert helms

It needs to be changed. For the times that an Angler goes fishing and the money they charge to go fishing these days. We should get the upper hand, NOT Commercial fishing.

Also the limits need to be change..To pay \$75 to \$100 and only allow TWO fish is Crazy.
\$35 to \$50 per FISH...

I appreciate your attention and will be following this issue closely.

Sincerely,

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. david huey

Being a reasonable person i would think that any good management plan would include closing fishing for the spawning season to all fishing. in fact closed seasons should be included in any management plan but these should include commercial and recreational fisherman equally,not closing fishing for only recreational anglers Thank you for your consideration kevin kenney p.o.box 510684 key colony beach fl 33051

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. kevin kenney

Subject: Oppose the Red Snapper Reallocation Scheme (Amendment 28)

Date: Wednesday, July 22, 2015 12:09:52 PM Eastern Daylight Time

From: Tom Harris

To: Gulf Council

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

But mostly the current quota is an obvious bias toward business interests over the interest of the public at large (who actually own the resource). Allowing the business interests to take the majority share of a public resource is unfair at best and borders on corrupt practices at worse.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed and corrupt initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Dr. Charles Hagen
7903 Westhaven Dr SW

From: Roy Lewis
To: Gulf Council
Category:

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Subject: Oppose the Red Snapper Reallocation Scheme (Amendment 28)

Date: Tuesday, July 21, 2015 2:39:00 PM Eastern Daylight Time

From: Cindy Higgins

To: Gulf Council

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

Let me put it another way. If I (and all other recreational fisherman) were successfully catching 24 hours a day it would not move the needle. Forget my address in your evaluation -- my brother owns a condo on the gulf and I use it regularly.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. Steve Williams

I think the ratio should actually grater than the 57.5% mentioned. However due to the likelihood of that happening I am willing to accept whatever can be done.

Regards,
Tim Moen & Family

Subject: Oppose the Red Snapper Reallocation Scheme (Amendment 28)
Date: Sunday, July 19, 2015 2:38:44 PM Eastern Daylight Time
From: Tracy Arcure
To: Gulf Council
Category:

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. perry lee

Are you wishing to create Jobs, Increase revenues? or just line your pocket. Yes the truth is Rec fisherman do not pay you, So of course you will vote for the commercial fishing interest. We understand your vote is for sale. But if you ever wish to do what is right for the economy and the People who work and enjoy the Rec fishing business, give some thought to those of us, who believe that you do try to get into office to help, not just get a speaking tour. We are a 19 billion dollar a year group. not a small thing more than 6 times the commercial fishing industry. So that they have the largest share of a catch, can only mean one thing, Some-one is paying for your vote. Is that how you wish to be remembered?

I hope not. This may sound harsh, but is it true?

I appreciate your attention and will be following this issue closely.
