The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. Robert Caldwell
PO Box 1971
Boca Grande, FL 33921-1971

Subject: Oppose the Red Snapper Reallocation Scheme (Amendment 28)

Date: Saturday, July 18, 2015 11:24:14 AM Eastern Daylight Time

From: Jeanette West

To: Gulf Council

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

To: Gulf Council

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. DOUG VANCE

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

My background as a psychologist and avid recreational angler and my study of the continuing issue related to allocation (and overall management for that matter) of red snapper leads me to the obvious conclusion that the Gulf Council has only one true alternative to Amendment 28 that makes any sense. That is to adopt Alternative 9 and begin the process of true recognition of the economic and social impact of the recreational sector. The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and now makes absolutely no sense. I can even recall hearing that commercial red snapper boats were actually fishing the Bay of Campeche during the period in question and that catch should not be included as a factor in any way.

The recreational sector has paid the price for the low quota allocation and this must stop. The Gulf Council has information available to them that clearly leads to the conclusion that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector. Listen to this advice that is from individuals stating this based on verified data.

Commercial arguments, most of which I have heard in open hearings, are biased by the financial benefit the Gulf Council has already conveyed on them that is based on a public resource. It is time for more of that public resource to be made available to the public - and that is not spelled COMMERCIAL. Alternative 9 is the Gulf Council's obvious choice to rectify a historical anomaly that was flawed from the outset and now clearly recognized.

I appreciate your attention and will be following this issue closely.

Sincerely,

Dr. F J Eicke

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. James England
1215 Pine Tree Rd

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

Hello I am writing concerning the limits on red snapper fishing, I hope that your decision will be based on factual information and not information that is not accurate or is due to guess work. I don't get to enjoy fishing as much as I would like, due to the current restrictions and closed seasons for fishing.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. Edward Mitchell Jr.

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

There are red snapper everywhere out there and I am just learning to fish. All these rules are ridiculous, something needs to be done. I spend \$200,000 on a fishing boat and I have to always check what fish I can catch on what day in whose water? That's BS. Slot limits are fine but the rules are too complicated.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Subject: Oppose the Red Snapper Reallocation Scheme (Amendment 28)

Date: Friday, July 17, 2015 8:16:30 AM Eastern Daylight Time

From: Kirby Klys

To: Gulf Council

Category:

HDear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. Hap Tumblin

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

Please remember that the recreational fishing creates many axillary jobs. Individually, I buy bait, gasoline, ice, beverages, tackle and above all a fishing license. Though commercial fisherman are part of the overall industry, this type of mass harvesting has decimated many species. The recreational fisherman suffers with limited catch.

I hope you will look at the entire scope of this issue before deciding on your vote.

I appreciate your attention and will be following this issue closely.

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

Having actively fished in the Gulf of Mexico for American Red Snapper as a recreational fisherman, I am in full agreement with the changes to Alternative 9 in Amendment 28 to the Reef Fish Management Plan. This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates. I further support the rights of commercial fisherman to harvest a fair portion of the resource. Still, it seems only fair to provide quality fishing opportunities for recreational fisherman as well.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. Luis M Maldonado

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

Subject: Oppose the Red Snapper Reallocation Scheme (Amendment 28)
Date: Thursday, July 16, 2015 10:38:42 PM Eastern Daylight Time
From: Jada Bond
To: Gulf Council
Category:

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. Thomas Buchanan

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

Dr. Bob Shipp, the foremost researcher in the area, has thrown his full support behind revamping the criteria of red snapper limits. Isn't it time to base quotas off the evidence of modern research, and not the data from when I was in grade school?

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. Steve Schipman

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

I have fished the State of Alabama artificial reef system, second to none, since it's genesis and have recruited fishermen (and their dollars) to our great state to share in the bounty. For a number of years, this myriad of fish species each outing offered kept them returning again & again. For the past few years, the greater majority of our reefs, at least those located in depths over 75 ft of water, have become a near monoculture, with mature red snapper being essentially all one can catch. I have not donned scuba gear to gain an indisputable position, however I mark virtually clouds of fish on many locations and can catch only snapper; 10-25lbs. Even using light tackle & multiple techniques, only an occasional kingfish lends variety to the mix.

The 'out of state' opinion has developed that it is not worth their time or expense to come to our state to fish when the only species they can consistently catch; they cannot keep.

Let's not discard this unique opportunity for so many for the preference of so few.

Please consider going even further with an increase in our recreational bag limit on this great food & sport fish, if not for the economic benefit or for the image of our state, do it for our children, who may never develop a love for fishing, simply because parents no longer wanted to go.

Thank you,
William G Hood

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. MARK DIECKMAN

Subject: Oppose the Red Snapper Reallocation Scheme (Amendment 28)

Date: Thursday, July 16, 2015 8:03:05 PM Eastern Daylight Time

From: Ann Castle

To: Gulf Council

Category:

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Ann Castle

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. Lynn Murtagh

Subject: Oppose the Red Snapper Reallocation Scheme (Amendment 28)
Date: Thursday, July 16, 2015 6:00:25 PM Eastern Daylight Time
From: Glenn Shivers
To: Gulf Council
Category:

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. Phillip Lovell

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. Richard Yuskaitis

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

I have fished and spearfished in the Gulf for over 25 years and can personally tell you the red snapper population is exceedingly abundant! There are more red snapper than anyone would have imagined even 5 years ago and the quota's need to be lifted. 25 years ago I never saw one.

Goliath grouper should also have a tag season, hook and line only, anyone who dives and spearfishes can tell you they are all over the place and there is no reason for not harvesting this species.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

When is someone going to look out for the common man?
Recreational fishermen and women number in the tens of thousands, we spend all the money on boats, fuel, tackle, vehicles, and in our case, our home, to be near the water; support thousands of jobs in the associated markets, and get screwed every time when it comes to red snapper fisheries. The commercial sector numbers a few hundred permit holders at best, they get the majority of fish, for what? The thing that evidently makes the world go 'round....MONEY! We get ten or fifteen days at most for a whole year....they get to fish when they want....and "self report" ...give me a break! For once, please think about the common person out trying to catch and put a few fish in the freezer for his family! Thank you. Terry Barnard, Dauphin Island, AL.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. Terry Barnard

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. John Ellis
2335 Anniston Rd

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing

success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. richard alvaro

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

I am an avid fisherman, Miami Yacht Club board member and Board Certified Admiralty Attorney and I believe the current rules regarding

red snapper are completely wrong and need to be changed.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

The commercials CAUSED the Problem!

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. Scott Salyers

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic

benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I'd also like to point out there are no land based game animals which can be taken for commercial sale, I find it hard to understand why sportfish are not treated the same way. There are multiple fish species which can be farmed or non sportfish which can be utilized so there is no need for a commercial fishery for sportfish. Just as game animals are managed for optimal populations through hunting regulation, game fish could be managed the same way. I see no reason why a commercial fisherman has a greater right to take fish than any other person. A permit was given years ago and can be taken away in the same manner. Look at the total value of sport fishing, where the income is spread out over many more people, compared to the concentration of funds for a few commercial fisherman. We will still have the non sportfish as well as farmed sea food to meet commercial needs.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. George Bolton

Jul 16, 2015

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

I am a 55 Y.O. NATIVE Floridian. I have fished more than 90% of the population. I have NEVER caught a true red snapper in S. Fl. Now, I hear reports of some being caught in our area.

The overall financial/economic benefit/value of this fishery generated from the recreational sector is an economic stimulus package to all the areas this species proliferates. It totals in the billions of dollars.

Every day the seasons are extended is a real financial benefit to all areas this species is made available.and those in the periphery of those areas.Florida is largely financially influenced by tourism. This is an incredible financial generator in that arena. All efforts to

continually increase the ratios towards the recreational sector will be an investment towards economic stability and resource abundance. The eventual goal should fall some where around 70/30, recreational/commercial.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Recreational fishing is a critical part of all the economies of the gulf region - and red snapper fishing is a key part of that segment. Given the significant rebound in the snapper fisheries, there really does not appear to be a need to give commercial fishing such a large percentage of the catch.

Thank you for taking time to consider all the recreational fishermen!

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. James Magee
13225 Sharswood Cir
Orlando, FL 32828-7726

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. Lonnie Harvey

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

First I would like to say that the fact of there not being a season at all on the Atlantic side is ridiculous. Red Snapper have truly become a nuisance for bottom fishermen. When you can catch 20-25lb snappers in 50ft of water and be told there just isn't enough is ludicrous. On average, if bottom fishing 20-30 are caught daily in which almost half float away to die even after venting. Listen to the anglers and not the

pencil pushers who really don't know the situation. This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent

recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates. This percentage is unfair to the recreational fisherman who bring more economic impact to the state than commercial interests. Even though the commercial industry was able to obtain 51 percent of this fishery the Red Snapper numbers grew larger. I feel that the over fishing of a species is due largely to commercial impact and therefore should be reduced. The recreational fisherman has never been able to reach the landed quota of the commercial fisherman even though his numbers are larger. This has been due to the time allocated to catch this species, fishing conditions due to in-climate weather and harvesting gear. Commercial harvesters professionally catch these species using gear that puts the fish at a disadvantage.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. Sean DeHart

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

The other thing is, the commercial sector gets to keep Red Snapper at 13 inches which is way to small. Most female Red Snappers don't even start spawning till at least 13 inches, some not until 27 inches. So I (we) think they should be moved up to at least 16 inches. If they really cared and didn't have there hands in the commercial sectors pockets maybe they would ammend this too. But as far to often we have

found they don't really care, as I (we) have complained about this for years and years. Then they wonder why we are running out of Red Snapper, and its not just the Red Snapper, its many of the reef fish.

I appreciate your attention and will be following this issue closely.

Sincerely,

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. Tom Brodrick
6161 Arcade Ct

Subject: Oppose the Red Snapper Reallocation Scheme (Amendment 28)
Date: Thursday, July 16, 2015 10:38:42 PM Eastern Daylight Time
From: Jada Bond
To: Gulf Council
Category:

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Jada Bond

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. Stephen Robison

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

I have fished the State of Alabama artificial reef system, second to none, since it's genesis and have recruited fishermen (and their dollars) to our great state to share in the bounty. For a number of years, this myriad of fish species each outing offered kept them returning again & again. For the past few years, the greater majority of our reefs, at least those located in depths over 75 ft of water, have become a near monoculture, with mature red snapper being essentially all one can catch. I have not donned scuba gear to gain an indisputable position, however I mark virtually clouds of fish on many locations and can catch only snapper; 10-25lbs. Even using light tackle & multiple techniques, only an occasional kingfish lends variety to the mix.

The 'out of state' opinion has developed that it is not worth their time or expense to come to our state to fish when the only species they can consistently catch; they cannot keep.

Let's not discard this unique opportunity for so many for the preference of so few.

Please consider going even further with an increase in our recreational bag limit on this great food & sport fish, if not for the economic benefit or for the image of our state, do it for our children, who may never develop a love for fishing, simply because parents no longer wanted to go.

Thank you,
William G Hood

Subject: Oppose the Red Snapper Reallocation Scheme (Amendment 28)

Date: Thursday, July 16, 2015 8:03:05 PM Eastern Daylight Time

From: Ann Castle

To: Gulf Council

Category:

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. Dennis Jones

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. perry matherne

Subject: Oppose the Red Snapper Reallocation Scheme (Amendment 28)
Date: Thursday, July 16, 2015 6:00:25 PM Eastern Daylight Time
From: Glenn Shivers
To: Gulf Council
Category:

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. juan tipper sr

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. Murray Beatts
1215 E Norfolk St
Tampa, FL 33604-5029

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

I have fished and spearfished in the Gulf for over 25 years and can personally tell you the red snapper population is exceedingly abundant! There are more red snapper than anyone would have imagined even 5 years ago and the quota's need to be lifted. 25 years ago I never saw one.

Goliath grouper should also have a tag season, hook and line only, anyone who dives and spearfishes can tell you they are all over the place and there is no reason for not harvesting this species.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

When is someone going to look out for the common man?
Recreational fishermen and women number in the tens of thousands, we spend all the money on boats, fuel, tackle, vehicles, and in our case, our home, to be near the water; support thousands of jobs in the associated markets, and get screwed every time when it comes to red snapper fisheries. The commercial sector numbers a few hundred permit holders at best, they get the majority of fish, for what? The thing that evidently makes the world go 'round....MONEY! We get ten or fifteen days at most for a whole year....they get to fish when they want....and "self report"...give me a break! For once, please think about the common person out trying to catch and put a few fish in the freezer for his family! Thank you. Terry Barnard, Dauphin Island, AL.

I appreciate your attention and will be following this issue closely.

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. wallace forehand
628 N Comet Ave
Panama City, FL 32404-9508

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. Brian Frazer

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

I am an avid fisherman, Miami Yacht Club board member and Board Certified Admiralty Attorney and I believe the current rules regarding red snapper are completely wrong and need to be changed.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Ms. Teresa Dunagin

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. Dan k

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I'd also like to point out there are no land based game animals which can be taken for commercial sale, I find it hard to understand why sportfish are not treated the same way. There are multiple fish species which can be farmed or non sportfish which can be utilized so there is no need for a commercial fishery for sportfish. Just as game animals are managed for optimal populations through hunting regulation, game fish could be managed the same way. I see no reason why a commercial fisherman has a greater right to take fish than any other person. A permit was given years ago and can be taken away in the same manner. Look at the total value of sport fishing, where the income is spread out over many more people, compared to the concentration of funds for a few commercial fisherman. We will still have the non sportfish as well as farmed sea food to meet commercial needs.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. George Bolton

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

I am a 55 Y.O. NATIVE Floridian. I have fished more than 90% of the population. I have NEVER caught a true red snapper in S. Fl. Now, I hear reports of some being caught in our area. The overall financial/economic benefit/value of this fishery generated from the recreational sector is an economic stimulus package to all the areas this species proliferates. It totals in the billions of dollars. Every day the seasons are extended is a real financial benefit to all areas this species is made available. and those in the periphery of those areas. Florida is largely financially influenced by tourism. This is an incredible financial generator in that arena. All efforts to continually increase the ratios towards the recreational sector will be an investment towards economic stability and resource abundance. The eventual goal should fall some where around 70/30, recreational/commercial.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Recreational fishing is a critical part of all the economies of the gulf region - and red snapper fishing is a key part of that segment. Given the significant rebound in the snapper fisheries, there really does not appear to be a need to give commercial fishing such a large percentage of the catch.

Thank you for taking time to consider all the recreational fishermen!

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. James Magee

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

First I would like to say that the fact of there not being a season at all on the Atlantic side is ridiculous. Red Snapper have truly become a nuisance for bottom fishermen. When you can catch 20-25lb snappers in 50ft of water and be told there just isn't enough is ludicrous. On average, if bottom fishing 20-30 are caught daily in which almost half float away to die even after venting. Listen to the anglers and not the pencil pushers who really don't know the situation. This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. clint weeks

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

The other thing is, the commercial sector gets to keep Red Snapper at 13 inches which is way to small. Most female Red Snappers don't even start spawning till at least 13 inches, some not until 27 inches. So I (we) think they should be moved up to at least 16 inches. If they really cared and didn't have there hands in the commercial sectors pockets maybe they would ammend this too. But as far to often we have found they don't really care, as I (we) have complained about this for years and years. Then they wonder why we are running out of Red Snapper, and its not just the Red Snapper, its many of the reef fish.

I appreciate your attention and will be following this issue closely.

Sincerely,

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. Bernard Bekkers
160 Rancho Mirage Dr
Kissimmee, FL 34759-3692

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates. This percentage is unfair to the recreational fisherman who bring more economic impact to the state than commercial interests. Even though the commercial industry was able to obtain 51 percent of this fishery the Red Snapper numbers grew larger. I feel that the over fishing of a species is due largely to commercial impact and therefore should be reduced. The recreational fisherman has never been able to reach the landed quota of the commercial fisherman even though his numbers are larger. This has been due to the time allocated to catch this species, fishing conditions due to in-climate weather and harvesting gear. Commercial harvesters professionally catch these species using gear that puts the fish at a disadvantage.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

Recreational Fishermen need equal access to the over populated Red Snapper fishery. We have never got a fare deal with Mr. Crabtree he is for commercial fishermen only, and of course the council is made up of mostly commercial fishermen. This is where the money is so we get left out. All the commercial fishermen were given these licenses for free and half of them sit at home and make 100K to 200K at home how unfair is that. Anyone with a feel for fairness should vote for this amendment

I appreciate your attention and will be following this issue closely.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. George Burns

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial. This has a HUGE impact on our area, Northwest Florida.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation. This flawed allocation is based on antiquated data measurement techniques which also need to be addressed.

I appreciate your attention and will be following this issue closely.

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

I have lived on the gulf coast for more than 40 years, and been an avid fisherman during many of them. Yet, for me while a sport, there always was a 'cost-benefit' ratio...

And I must admit - the 2 fish limit during the season, and zero fish 'out of season' - esp when I have to throw back so many fish on certain days - either because of size, or season...makes my heart sore, for even when vented.. knowing the fish has been stressed and compromised what may happen to the fish....

This is esp heart breaking when you hear of or see the results of others throwing legal fish back - in-order to get a bigger fish to keep!

This amendment is a step in the right direction to address one of the fundamental flaws of the current system, and hopefully will lead to other changes that will allow caught fish to stay on board, (and be enjoyed at the dinner table).

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red

snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. Bob Bulla
8430 Sumner Ave
Fort Myers, FL 33908-3812

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

I am a recreational fisherman. Each year, I spend a lot of money fishing in the gulf on both public and private reefs. We store two boats in Shalimar Yacht Basin and pay rent each month. We own property in Destin which entails property tax, utilities, maintenance, insurance, groceries, all purchased locally. Every season we buy fuel, bait, ice, tackle all purchased locally. We go to the shops, eat at the restaurants, spend money all over town. If you multiply my foot print by the thousands of us who annually fish in the Gulf of Mexico, we have a huge economic impact. This impact will increase if the quotas are fixed to provide the recreational angler more catch. We have been "cheated" by the antiquated numbers being used. All of us

know there are plenty of snappers out there. It is time to get some good numbers and fix the system so it is fair. This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates. If you can't catch any fish you do not spend the money to go. The State season is what we need to make the difference. Open up the week-ends in the fall. Increase the quotas. Watch what happens. None of us want to hurt the red snapper fishery, but it is ridiculous to have a 9 day season in Federal waters.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector. I agree. In Destin it will make a huge difference. The impact will be felt all along the Gulf coast wherever recreational anglers leave port.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing

success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. David Walker
280 Ellwood Ave
Satellite Beach, FL 32937-3131

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

MY opinion is that commerical fishing does more harm to remove the population than sport fishing.

There are sooooo many snapper in the ocean. We dive all week long and see the population... it's a lot.

Commercial guys take so many fish while the recreational guys take so little.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. Tod Bierling

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. Nawfal Ezzagaghi
6908 Tomy Lee Trl
Tallahassee, FL 32309-1658

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low. Better Technology and more offshore boats means fewer fish per fisherman even though Alabama artificial reef development funded mostly by recreational fisherman have dramatically increased the snapper population. This needs to be fixed.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Moreover, the council's recent decision to sector separate charter boats for a 44-day snapper season and take that share from the recreational allocation merely compounds the out-of-balance policies of the Council and should be corrected.

As you know, several studies, including from the Council's own Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

The Gulf Council should act responsibly and approve Alternative 9, a needed move towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. Morris Pitre
1835 Highway 104
Opelousas, LA 70570-1794

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

It is time to update the old allocation based on old data.

The current allocation to the recreational sector was set before net bans and bag limits were in effect and changed the snapper population. Plus, recreational participation was low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

Please take action and move forward with Alternative 9.

I appreciate your attention and will be following this issue closely.

Jul 16, 2015

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

Please consider the tremendous economic impact that recreational fisheries has on the Gulf region vs. the impact of a commercial harvest of Red Snapper. The impact the recreational pound of Red Snapper in the local economy affects ten times the lives of the same pound on the commercial side. This alone should be justification enough.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

It would only be fair due to the recalibration to give the extra quota to the recreational section. I support the allocation shift for the recreational gulf red snapper and ask that you do the same.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. Trip Aukeman

Jul 16, 2015

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. Nigel Fairbank

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. Alan Buchanan

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. Joe Alexander

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. David Thacker
839 Jamaica Rd
Venice, FL 34293-5449

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial. It should be 70/30, but that's another discussion in itself.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

Why is that I see hundreds if not thousands of red snapper fish in commercial boats, but yet recreational fisherman who are a much smaller percentage of the fishing population are continually limited to a very small amount of snapper? This sounds like corruption at it's finest. The season for recreational snapper fishing is almost comical. Take a few weekends of bad weather and you've missed it, yet commercial fisherman can use nets and catch thousands of pounds of snapper and it's ok? Someone's pocketbooks are getting lined and kick-backs seem to be the most logical choice for these decisions. It doesn't take a genius to see what's going on in this industry. You let the commercial fisherman fleece the red snapper while the common recreation fisherman

barely gets a chance to go red snapper fishing due to these egregious and outrageous limits and rules.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. Ray Jones

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. james lyle

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Mr. James Owens
1501 Southwind Ct
Casselberry, FL 32707-5152

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

Do NOT change the allocation.

I have invested \$ 300,000.00 in the permit, boat, and shares based on the law now.

If you change it will effect my business negatively. we are already to high on the TAC so don't tell me we will keep you whole, The current TAC is NOT sustainable in the Gulf.

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

From: Tim Dyer

To: Gulf Council

Dear Governor and Gulf Council Members:

I am in full support of "Amendment 28". As a recreational fisherman I spend on average of \$175.00 a trip to take my family fishing. No I'm not rich but we do enjoy fishing but have gone a total of 4 times this year. The way the limits and closures of the different types of fish has made it totally unecomonical for us to go. I do use our fishing to supplement our groceries as well as spending time on the water with family and friends. That being said I have been getting chain emails from commercial fishermens lobbyist with prewritten letter to you to defeat this amendment. As a matter of fact this email is being written on their site with their form, I just erased the misinformation that they want you to believe. Myself and all my friends that fish recreationally have been fed up for going on two years. We don't feel as we have a voice in any the laws and limits and seasons that seem to be getting arbitrarily set with no rhyme nor reason except lobbyist have your ears and we do not. My hope is that some commen sense regulations can be set seeing how there or more red snapper out there now than ever in my life time. Sincerely,
Timothy P. Dyer, Mobile Al

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change. I enjoy the coast most of all places in TX and the restaurants. As higher wages are being demanded, people are not going out to eat as they used to and this will not help. Who in the Hell do you think you are to be able to come in and take from the bounty God gave us all. It is not unlike at all the water companies, who when there is a drought, can still take out their % of water, but the users can only take so much. This is plain wrong. I am a fiercely proud Texan and a really embarrassed American. Please leave OUR red snapper in our waters for the recreational fisher as well as for the restaurants who create jobs for this state as well as for the tourism out state depends on to thrive.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Date: Tuesday, July 14, 2015 7:42:36 PM Eastern Daylight Time
From: Timothy Rose
To: Gulf Council
Category:

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

The Gulf of Mexico Fishery Management Council

Dear Gulf of Mexico Fishery Management Council,

I am writing to support Alternative 9 in Amendment 28 to the Reef Fish Fishery Management Plan.

This amendment would result in an average allocation of 57.5 percent recreational and 42.5 percent commercial.

The current allocation of 51 percent to the commercial sector and 49 percent to the recreational sector was based on historic catch at a time when red snapper abundance was at an all-time low and recreational participation was therefore disproportionately low due to poor fishing success rates.

Several studies, including from the Gulf Council's Socio-Economic Science and Statistical Committee, conclude that substantial economic benefits would be gained by shifting a greater share of the red snapper quota to the recreational sector.

While reallocation discussions are inherently contentious and difficult, there is too much at stake for the Gulf Council to continue inaction on this issue. By moving forward with Alternative 9, the Gulf Council would make progress towards rectifying the flawed initial red snapper allocation.

I appreciate your attention and will be following this issue closely.

Sincerely,

Ms. Lisa Faulk

To: Gulf Council

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Subject: Oppose the Red Snapper Reallocation Scheme (Amendment 28)

Date: Monday, July 13, 2015 9:54:14 PM Eastern Daylight Time

From: harold grubb

To: Gulf Council

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Subject: Oppose the Red Snapper Reallocation Scheme (Amendment 28)

Date: Monday, July 13, 2015 6:23:29 PM Eastern Daylight Time

From: Sharon Frank

To: Gulf Council

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Mr. Governor

I cannot begin to tell you how many Jobs would be lost by voting for Amendment 28. Please don't vote for this amendment. For example:

The Red Drum was taken away from the commercial fishermen in the 1980's and made into a sportsman's fish only and because the recreation fisherman has no accountability the fish it has over populated the gulf of Mexico. The cause and effect is an Eco system that is off balance . There is more red drum now than ever and it eating all the natural foods of other species such as Sheephead , black drum two income producing resource's for small local fishing families.

The evidenced is out in the gulf of Mexico that shows we need the keep the commercial snapper quotas as is for the sake of the eco system and for the financial benefit to the small local fishing families.

thank you for taking the time to read this

Subject: Oppose the Red Snapper Reallocation Scheme (Amendment 28)
Date: Monday, July 13, 2015 4:24:26 PM Eastern Daylight Time
From: Marisa Pisani
To: Gulf Council

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

To: Gulf Council

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Subject: Oppose the Red Snapper Reallocation Scheme (Amendment 28)

Date: Monday, July 13, 2015 2:09:25 PM Eastern Daylight Time

From: Geo Turner

To: Gulf Council

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

From: Richard Lovesky

To: Gulf Council

Dear Governor and Gulf Council Members:

"Amendment 28" would be a great plan to protect red snapper, and keep commercial interests from over-fishing Red Snapper into extinction. It is well known that the commercial fishing interest is only concerned with profits, and cares only that it makes as much money as possible. When Red Snapper become extinct, they will move to the next species to target.

"Amendment 28" is a genuine promise to recreational fishermen who will experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is totally fair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please support Amendment 28 and allow real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that help sustain the availability of the species for future generations.

We have a species that is perfect for the commercial fishing industry, and it is not only sustaining, it is thriving- Lionfish. This invasive species are shown in huge numbers in deeper water which is readily accessible to commercial fishermen, but not so to the recreational fisherman. Lionfish are absolutely delicious, and sell in the \$20 per pound range. They have no natural predators in Gulf waters, and gobble up native species at an alarming rate.

This would be a WIN/WIN.

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

To: Gulf Council

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Subject: Oppose the Red Snapper Reallocation Scheme (Amendment 28)
Date: Monday, July 13, 2015 11:23:02 AM Eastern Daylight Time
From: Howard Petlack
To: Gulf Council

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

To: Gulf Council

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

We as consumers outweigh and outnumber the amount of recreational fishermen and should have more representation provided. How are rules being made for a vast minority when undercutting the majority would cause so much harm?!?!?

Subject: Oppose the Red Snapper Reallocation Scheme (Amendment 28)

Date: Monday, July 13, 2015 10:46:39 AM Eastern Daylight Time

From: rebecca hocquard

To: Gulf Council

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Category: , APa Reef Fish, APa CMP, Charterboat

Dear Governor and Gulf Council Members:

It about time that the republican party and federal managers stand in defense of small business in America especially small fishing companies like mine. I have a complete commitment in fisheries and their management. I am a federal charter for hire businessman, I am a commercial IFQ red snapper fisherman , and have interest with my sons in three seafood restaurants on the Destin Harbor and Sandestin Bay side. Every waking moment of our families life is focused on the health and well being of federal fisheries. It is our life blood financially and morally.

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016 that our family depends on for our living.

Our customers will pay the same harmful price and as citizens of the USA their access to red snapper and other IFQ fish should remain as important as those who can go access them on their own boat.

This "reallocation" proposal solves nothing for the access issues facing the private boat angler and their lobby. It will not fix their access issues only a modern management plan has a chance.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers and not gain one single extra day on the water for the private boat sector more for more than 1 year.

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

Dear Governor and Gulf Council Members:

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.

"Amendment 28" would hurt small businesses and families along the Gulf coast. Some versions of the proposal could cut more than one million pounds of popular red snapper from the consumer market in 2016.

"Amendment 28" is a false promise to recreational fishermen who will not experience long-term stability or longer seasons as a result of this change.

This "reallocation" proposal is divisive, unfair and comes at a time when demand for local and sustainable seafood is at an all-time high.

Please oppose Amendment 28 and focus on real solutions for recreational fishermen that will actually extend seasons for anglers over the long-term instead of schemes that hurt the seafood industry and consumers.
