Shrimp Fishery to Re-Open Off Texas on July 15, 2013

NOAA Fisheries announces federal waters from 9 to 200 nautical miles off Texas will open to shrimp trawling at 30 minutes after official sunset, local time, on **July 15, 2013**, corresponding to the time Texas opens its waters to shrimp trawling.

The shrimp fishery is closed annually off Texas to allow brown shrimp to reach a larger and more valuable size prior to harvest, and to prevent waste of brown shrimp that might otherwise be discarded because of their small size.

The opening dates of the Texas closure are based on the results of biological sampling by the Texas Parks and Wildlife Department (TPWD). NOAA Fisheries opens federal waters off Texas when the state of Texas opens its territorial waters. Texas opens state waters when projections indicate the average size of brown shrimp leaving the estuaries is 112 mm total length, during a period of maximum duration ebb tides. TPWD has projected the criteria to end the Texas closure will be met on July 15 this year.

About Gulf of Mexico Fishery Management Council

The Gulf of Mexico Fishery Management Council is one of eight regional Fishery Management Councils established by the Fishery Conservation and Management Act of 1976. The Council prepares fishery management plans, which are designed to manage fishery resources within the 200-mile limit of the Gulf of Mexico.
