Comparison of Sentiment by Sector

Sentiment by Sector for All Comments

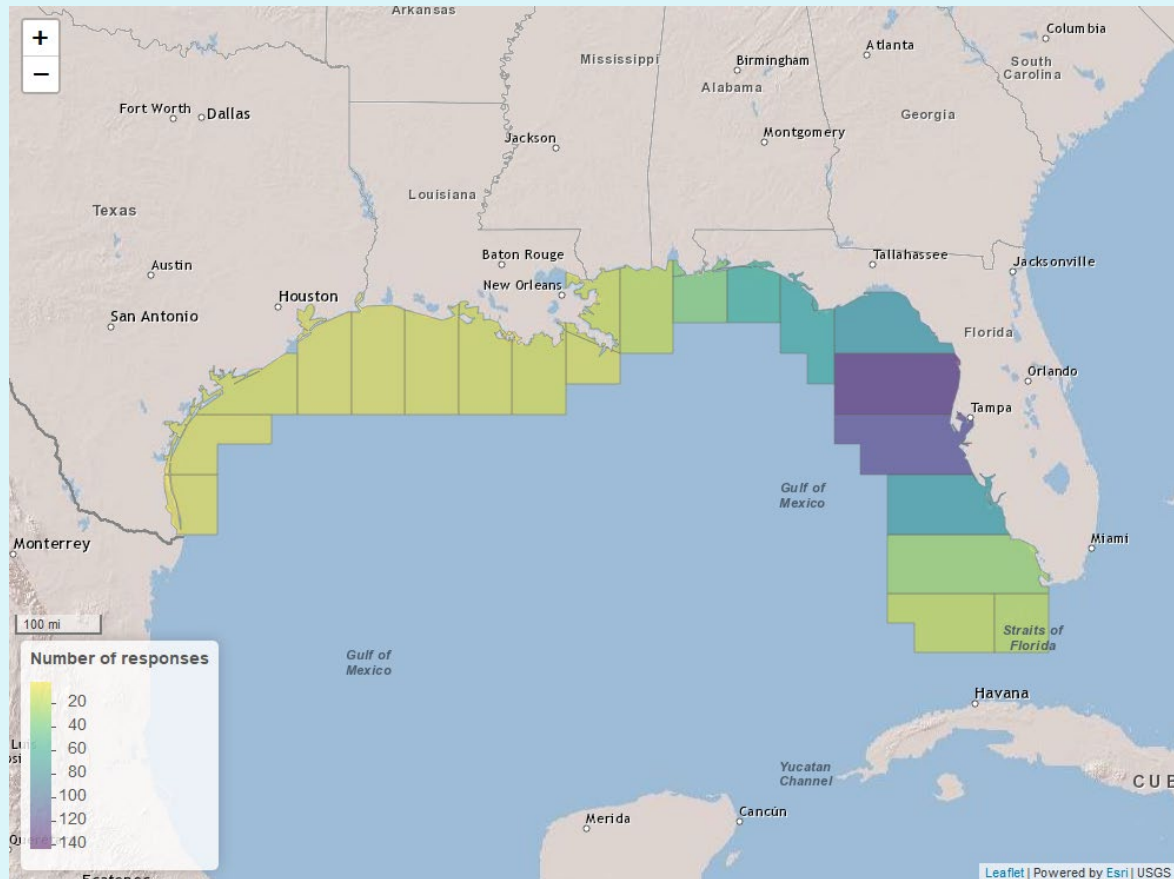

Sentiment by Sector of Comments Related to Stock Condition

Based on manual analysis

Response Rate by Location

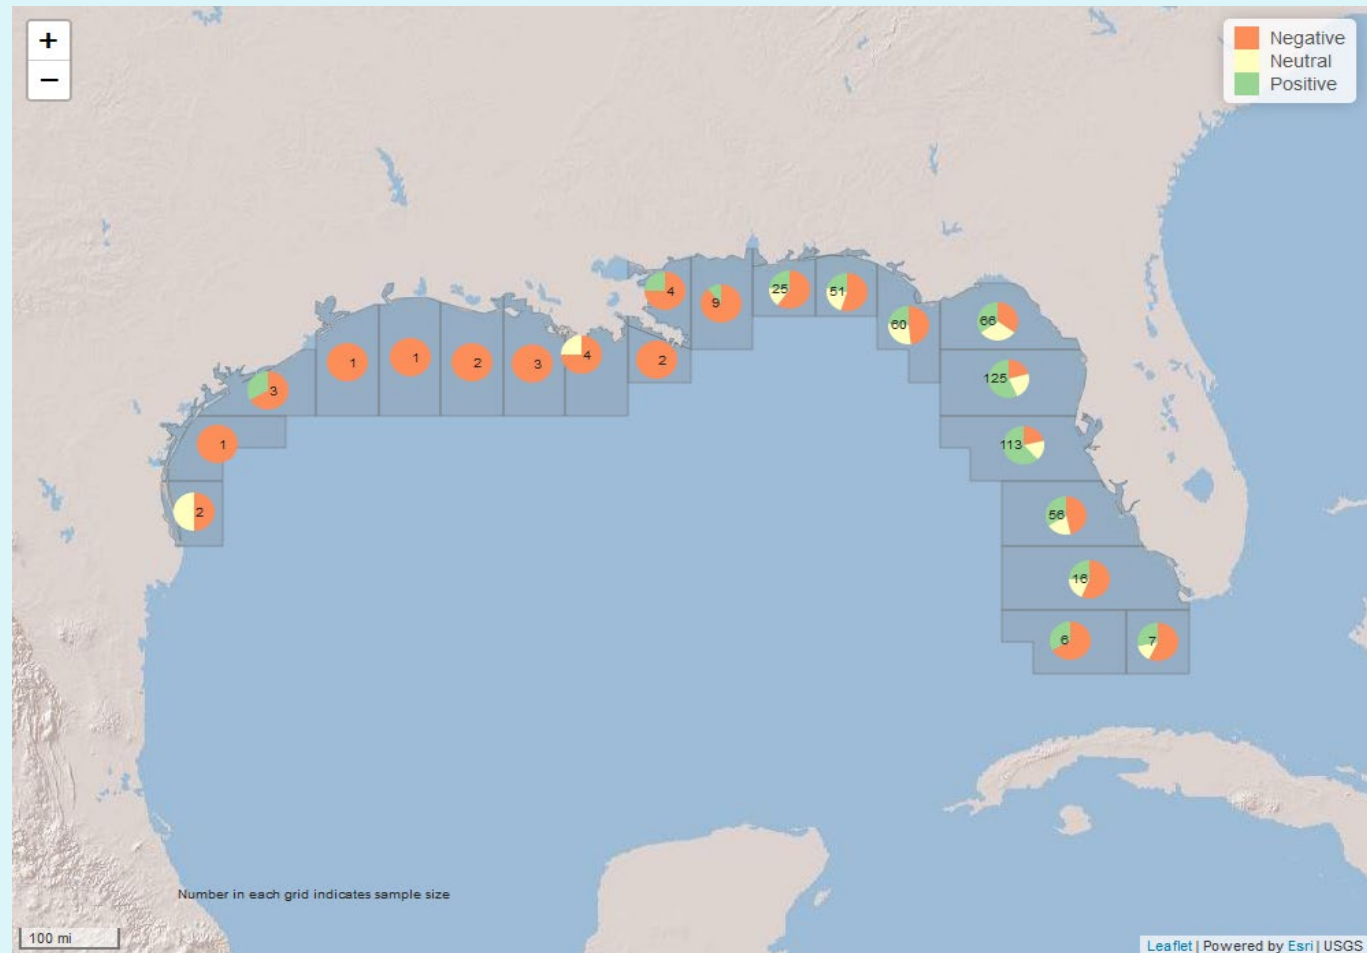

- Most responses were gathered off central Florida
- Few responses gathered west of Alabama. Many areas in the Western Gulf received only one response.

Based on manual analysis of all comments

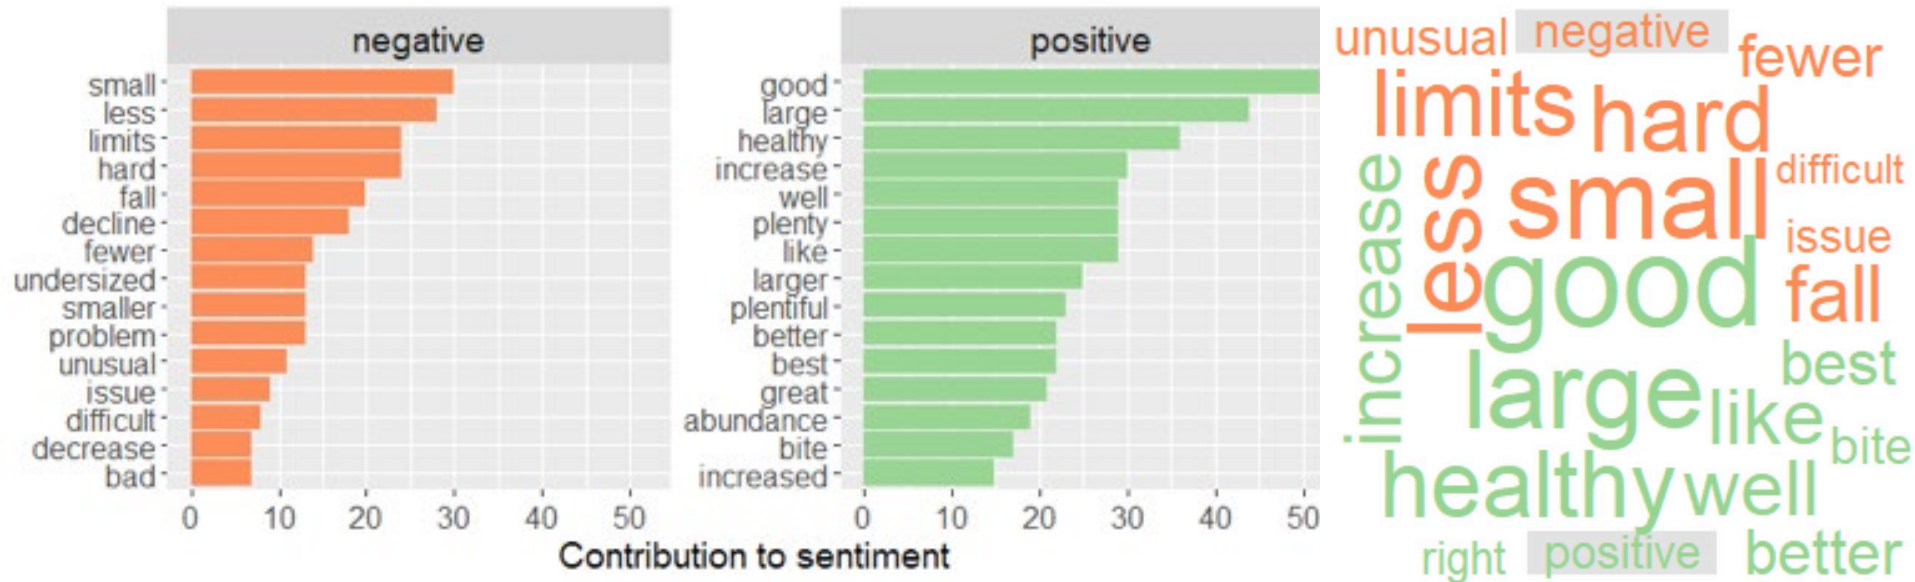

Response Sentiment by Location

- Respondents could report observations for one or more grid location
- 557 responses were recorded

Based on manual analysis of comments related to stock condition

Automated Analysis

Most frequently used negative words could indicate that anglers with negative perceptions were seeing small fish and less fish overall.

Most frequently used positive words could indicate that anglers with positive perceptions thought fishing was good and they were seeing large healthy fish.

Manual Analysis

Positive Comments

- Lots of juveniles
- More fish look healthy and colorful (blue fins)
- Lots of big fish (close to shore)
- Easy to catch when the water cools

Neutral Comments

- Males displaying spawning behavior in summer
- Seeing more fish over sand bottom (avoid divers)
- Population shifting to shallow water

Negative Comments

- Depredation by goliath, sharks, and dolphins has increased
- Fishing pressure has been heavier than usual
- Gags are skinnier than usual and don't seem as healthy
- Commercial fishing during the spawn is a problem
- Being outcompeted by red snapper
