	4- King Mackerel*	?	?	?

* Interim analyses for these species are considered “health checks”, until the stock assessment upon which the IA is based has been used in the implementation of revised catch advice by the Council.

Points to Consider

- Interim analyses take approximately 3 months to complete.
- SSC typically meets five times a year
- NMFS typically takes 6+ months to implement a management change once transmitted by the Council
- Unknown what indices may be candidates for coastal migratory pelagic species
