## LIST OF TABLES

<b>Table 1.2.1.1</b> Required MRIP FHS trip effort reporting elements for charter vessels
<b>Table 1.2.1.2</b> Number of raw for-hire reported trips, number of trips intercepted by APAIS,
number of vessels selected for the effort telephone survey, the telephone response rate (operator
agreed and answered the survey), percentage of contacted for-hire operators that refused the
survey, and percent of operators who could not be contacted by the MRIP sampler9
<b>Table 1.2.1.3</b> Information collected in the APAIS of recreational anglers that is conducted at
public marine fishing access points
Table 1.2.2.1 Information collected from charter vessel operators by Louisiana's LA Creel
program
<b>Table 1.2.2.2</b> Information collected from anglers on charter vessels in the Texas Parks and
Wildlife creel survey.
<b>Table 1.2.2.3</b> Annual (2019-2023) estimated for-hire effort from the state of Louisiana collected
from the LA Creel program. LA Creel effort estimates are calculated in angler trips (column 2).
The annual average number of anglers per for-hire trip was calculated using vessel captains
reports to the LA Creel telephone effort survey (column 3). This provided an approximate
estimate of the annual number of for-hire vessel trips (column 4). Column 5 is the number of
for-hire trips sampled that were also contacted by the effort telephone surveyors within the same
week and then tabulated for the entire year. The annual number of conducted telephone surveys
is represented in column 6. Of those conducted surveys (highlighted in gray), the table also
presents the percentages of those survey where a for-hire captain accepted and completed the
survey (column 7), the captain was unable to be reached by phone; and therefore, did not
complete the survey (column 8), and the percentage of surveys where the captain was
successfully contacted by phone but refused to participate in the survey (column 9)
Table 1.2.3.1 Required data reporting elements for headboats participating in the SRHS 14
<b>Table 1.2.3.2</b> The number of vessels reporting landings to SRHS by Gulf state from 2019-2023.

### CHAPTER 1. INTRODUCTION

## 1.1 Background

The Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act) requires the National Marine Fisheries Service (NMFS) and regional fishery management councils to end overfishing, rebuild overfished stocks, and achieve, on a continuing basis, the optimum yield (OY) from federally managed fish stocks. These mandates are intended to ensure fishery resources are managed for the greatest overall benefit to the nation, particularly with respect to providing food production, recreational opportunities, and protecting marine ecosystems.

Accurate information about catch, effort, and discards is necessary to achieve OY from federally managed fish stocks. The for-hire component of the recreational sector (i.e., charter vessels and headboats) harvests a substantial proportion of the annual catch limit (ACL) for several federally managed fish species in the Gulf of Mexico (Gulf). This amendment affects reporting requirements for vessels issued Gulf charter vessel/headboat permits under the Fishery Management Plans (FMPs) for the Reef Fish Resources of the Gulf of Mexico (Reef Fish FMP), Coastal Migratory Pelagic (CMP) Resources in the Gulf of Mexico and Atlantic Region (CMP FMP), and dually permitted Highly Migratory Species (HMS) fishermen (Figure 1.1.1).

**Figure 1.1.1.** Jurisdictional boundaries of the Gulf (blue), South Atlantic (orange), Mid-Atlantic (green), and New England (peach) Fishery Management Councils. Note: the Atlantic Region for CMP species includes the South Atlantic and Mid-Atlantic Council areas.

## 1.2 Current Charter For-hire Data Collection Programs

The Gulf of Mexico Fishery Management Council (Council) is considering alternatives that would require electronic reporting of fishing trip information from for-hire vessels possessing a federal Gulf charter/headboat reef fish or a federal Gulf charter/headboat CMP permit. The Council recognizes that improved data reporting in these fisheries could reduce the likelihood that ACLs are exceeded and accountability measures are triggered. Data elements collected using electronic logbooks are also likely to improve estimates of bycatch and discard mortality rates for many federally managed finfish species in the Gulf.

# 1.2.1 Federal Marine Recreational Information Program For-Hire Survey and Access-Point Angler Intercept Survey

The Marine Recreational Information Program (MRIP) and MRIP's Access-Point Angler Intercept Survey (APAIS) operate in Mississippi, Alabama, and Florida. To assess fishing effort in the for-hire component, MRIP samplers contact charter vessel operators (a weekly sample of 10% of the fleet) by telephone to conduct the For-Hire Survey (FHS) for fishing effort (Table 1.2.1.1). Charter vessel operators are required to report all trips taken during selected weeks (effort only) whenever they are selected to participate in the MRIP survey. The FHS has a stratified design, with for-hire vessels as sampling units, and is stratified by state, sub-state region (applicable to Florida only), vessel type (charter or Headboat), and sample week within the two-month wave. The sample week is Monday through Sunday. Prior to the sample selection, the sample frame is sorted by three additional variables, creating three additional implicit strata: business county, and permit type. The business county variable is the county from which the vessel operates. In addition to these three variables, a uniform random variable is created and used to order vessels within the business county, vessel length, and permit type groups. Sample selection is then systematically done without replacement at the stratum level (by vessel type, state, sub-state region [in Florida], sample week, and by the implicit strata from the sample frame sorting process: business county, vessel length, and permit type). The FHS has a fixed sampling rate of 10% within strata. In addition, there is a minimum sample size requirement of three vessels from each stratum.

**Table 1.2.1.1** Required MRIP FHS trip effort reporting elements for charter vessels.

Reporting Elements
Number of vessel trips with paying passengers in the sample week
Date of each vessel trip
Mode of each vessel trip (charter or headboat)
State/county and site where vessel trip returned
Distance from shore where each vessel trip occurred
Area fished
Number of anglers who fished on each vessel trip
Hours of actual fishing activity
Method of fishing (e.g., casting, drifting, trolling)
Target species
The return time for each vessel trip

Data source: MRIP Survey Design and Statistical Methods for Estimation of Recreational Fisheries Catch and Effort document.<sup>1</sup>

To improve response rates, an advance letter is mailed to the representatives of all selected vessels one week before the reference week (i.e., two weeks before the phone interview). The letter details the dates of the reference week that representatives will be asked about during the interview, the contact information of the organization conducting FHS interviews, and a log sheet with the questions that will be asked. Respondents are encouraged to complete the log sheet prior to the call, as it may reduce the potential for recall bias and decrease the time needed to complete the survey over the phone. Cooperation levels are either cooperative, where the vessel representative responds to telephone interviews, or non-cooperative, where the vessel representative does not respond or refuses to participate. To enforce the mandatory reporting requirement to FHS for federally permitted charter vessels in the Gulf permit holders who refuse to participate in the survey are notified by letter of their obligation to report as a condition for permit renewal. However, if a charter vessel operator cannot be contacted after seven attempts for a selected week, the final interview status is "unsuccessful contact" (Table 1.2.1.2). Vessels representatives that are non-cooperative are kept in the sample frame but are automatically coded as a refusal and are not actually contacted if selected for sampling. The percent of selected vessels that are unable to be contacted by phone may be quite high in some strata. The vessel directory is updated regularly based on input from APAIS samplers, state FHS coordinators and vessel representatives. The directory can also be updated with information obtained during the telephone survey.

**Table 1.2.1.2** Number of raw for-hire reported trips, number of trips intercepted by APAIS, number of vessels selected for the effort telephone survey, the telephone response rate (operator agreed and answered the survey), percentage of contacted for-hire operators that refused the survey, and percent of operators who could not be contacted by the MRIP sampler.

	For-hire survey	APAIS				Non-
	raw reported	trips	Vessels	Response	Refusal	contact
Year	trips	sampled	selected	rate	rate	rate
2019	6,329	1,262	10,523	57%	13%	29%
2020	6,840	1,047	12,570	63%	11%	25%
2021	6,004	1,872	10,338	60%	11%	29%
2022	4,827	1,620	10,335	58%	9%	32%
2023*	4,659	2,264	10,113	62%	6%	32%

<sup>\*</sup> Those data reported for 2023 are considered preliminary and were pulled by Gulf States Marine Fisheries Commission on March 12, 2024.

To assess catch, APAIS uses a voluntary dockside intercept survey to collect information on landings and discards (Table 1.2.1.3). The APAIS program collects individual catch data from anglers returning to public fishing access sites (e.g., boat ramps, piers, beaches, jetties, bridges or marinas). Trained interviewers administer the survey and collect data on the number and disposition (e.g., harvested or released) of each fish species caught, length and weight measurements of individual fishes, and angler-specific information about the fishing trip. Data are collected monthly and are used to calculate catch rates (mean catch per angler trip) every two months as preliminary wave estimates, and then at the end of each year as final annual estimates. The APAIS applies a time-space sampling method (i.e., sampling at predetermined fishing access sites during specific date and time intervals), with a stratified, multi-stage cluster design. This type of design maximizes sampling efficiency and the spatiotemporal extent of the survey. The sample frame for this target population consists of a list of fishing access sites, which have been clustered (by both level of fishing pressure and geographic location) and crossed with a date-time calendar. Site-day-times are selected in proportion to their fishing pressure. APAIS sampling is stratified across time, geographically (by sub-region of the coast, state and sub-state region) and by site groups based on primary fishing mode. Temporally, there are four strata: year, month, kind-of-day (i.e., weekdays, weekends, holidays), and time interval (i.e., day intervals 8 AM-2 PM and 2 PM-8 PM, night intervals of 2 AM-8 AM and 8 PM-2 AM, and peak interval of 11 AM-5 PM). MRIP surveyors sample at high activity sites more frequently, but include low activity sites to obtain a representative sample and capture variation in fishing activity. When any recreational fisherman is encountered the location, mode (e.g. shore, private, or for-hire), general area fished, fish species, number of fish, disposition of angler's catch (e.g. observed harvest, report harvest, or released alive) is recorded. When possible, the length and weight of harvested fish is also documented.

**Table 1.2.1.3** Information collected in the APAIS of recreational anglers that is conducted at public marine fishing access points.

Reporting Elements
Location
Mode (shore, private, rental boat, for-hire vessel)
General area fished (i.e., inland, state territorial sea, or federal
exclusive economic zone)
Species identification
Total number of each species by disposition (e.g., observed harvest
[Type A], reported harvest [Type B1], and released alive [Type B2])
Length and weight of individual fishes (when possible)
Area fished
Fishing mode

Final MRIP for-hire estimates for the eastern Gulf (Mississippi, Alabama, and Florida) are the product of estimated effort from the MRIP for-hire telephone survey and landings estimates generated from APAIS. These regional estimates are reported in six two-month waves and annual timeframes. The voluntary reporting of dock-side landings, no-access to private landings sites, and telephone survey refusal rate contribute to uncertainty in for-hire estimation. Increasing the reporting frequency along with enhanced data collection and validation could improve quota monitoring, stock assessments, and catch and discard estimates.

# 1.2.2 State of Louisiana LA Creel program and Texas Parks and Wildlife creel survey

Since 2014, Louisiana generates weekly estimates of catch and effort through their LA Creel program (Table 1.2.2.1). LA Creel uses a combination of data collected dockside (access point survey) and through weekly phone and email effort surveys to estimate recreational saltwater fish harvests. The LA Creel program consists of biologists conducting interviews at public fishing sites, charter captains and groups of saltwater anglers about their fishing activities. LA Creel provides weekly recreational fishery information to aid in the management of Louisiana's valuable fishery resources. It is composed of an on-site access-point survey and two weekly effort surveys stratified across five basins. The access point survey provides estimated catch rates per trip. One effort survey generates estimated private angler effort in the form of total angler trips and the other does the same for charter trips. Licensed private anglers are stratified across geographical regions and Louisiana's Recreational Offshore Landings Permit (ROLP) holders, while licensed charter captains are stratified between those with and without ROLP permits. Using licensed anglers provides a clearly defined angler frame with high quality contact information, while stratifying within this frame allows LA Creel to account for differences in fishing avidity across the state. Access point survey assignments are randomly drawn based on fishing pressures weighted by the types of activities present and the total angler activity. LA Creel boasts production of weekly landings at the basin level on just a two-week delay which can reduce recall bias and provide near real time landings estimates that can be used in monitoring recreational quotas and identifying impacts to recreational landings from short term events. LA

Creel contacts for-hire captains via telephone at random, with a goal of reaching 30% of captains who fish offshore (those who hold a ROLP) and 10% who fish inshore (who do not hold a ROLP). During red snapper season, LA Creel contacts 100% of captains who hold offshore permits.<sup>2</sup>

**Table 1.2.2.1** Information collected from charter vessel operators by Louisiana's LA Creel program.

Reporting Elements				
Number of trips per day				
Trip length				
Date of trip				
Area fished (basin where majority of fish were harvested)				
Public or private launch used				
Number of paying clients				
Primary and secondary target species				
Harvest by species				
Discards by select species				

Texas Parks and Wildlife Department (TPWD) conducts their own creel survey to estimate private and charter landings in Texas.<sup>3</sup> TPWD Sport-boat Angling Survey uses dockside interviews at recreational boat access sites to generate catch and effort estimates for finfish species caught by private boat and charter operators off the Texas coast. Texas reports recreational data in high (May 15 through November 20) and low (November 21 through May 14) activity periods. Creel surveys are conducted from 10 AM to 6 PM at specified boat-access sites along the Texas coast. Over 1,000 surveys are scheduled annually on randomly selected weekdays and weekends in proportion to the amount of fishing activity at each site. Charter vessel catch and effort data in Texas are monitored by the Texas Parks and Wildlife Department's Coastal Creel Survey (Table 1.2.2.2). This is a field-intercept survey of boat-based fishing, including for-hire vessels. This survey estimates fishing effort and catch (harvest only) on a seasonal (high-use and low-use) basis.

\_

<sup>&</sup>lt;sup>2</sup> https://www.lafisheriesforward.org/wp-content/uploads/2024/02/LFF\_FastFacts\_LaCREEL\_2024-01-ADA.pdf

<sup>&</sup>lt;sup>3</sup> https://tpwd.texas.gov/fishboat/fish/didyouknow/coastal/creel.phtml

**Table 1.2.2.2** Information collected from anglers on charter vessels in the Texas Parks and Wildlife creel survey.

Reporting Elements				
Species identification				
Trip start time				
Total number of each species caught				
Length individual fishes (6 fish of each species)				
Number of anglers				
Angler county of residence				
Bay of Gulf area fish caught				
Bait and gear used				
Target species				

Like all surveys, both the Louisiana and Texas state surveys have inherent uncertainty. Both LA Creel and the TPWD survey are only conducted in their state and therefore cannot generate Gulfwide estimates. LA Creel is comparable in survey methodology to the MRIP design. The TPWD survey only produces landings estimates and reports every six-months. This time frame limits in-season monitoring for short fishing seasons (e.g., weeks or months). Both state effort surveys, like APAIS, are also limited to intercepting anglers at public access points and their willingness to answer dockside interview questions, and in the case of LA Creel, the effort (telephone survey) portion of the program (Table 1.2.2.3).

**Table 1.2.2.3** Annual (2019-2023) estimated for-hire effort from the state of Louisiana collected from the LA Creel program. LA Creel effort estimates are calculated in angler trips (column 2). The annual average number of anglers per for-hire trip was calculated using vessel captains reports to the LA Creel telephone effort survey (column 3). This provided an approximate estimate of the annual number of for-hire vessel trips (column 4). Column 5 is the number of for-hire trips sampled that *were also* contacted by the effort telephone surveyors within the same week and then tabulated for the entire year. The annual number of conducted telephone surveys is represented in column 6. Of those conducted surveys (highlighted in gray), the table also presents the percentages of those survey where a for-hire captain accepted and completed the survey (column 7), the captain was unable to be reached by phone; and therefore, did not complete the survey (column 8), and the percentage of surveys where the captain was successfully contacted by phone but refused to participate in the survey (column 9).

Year	Estimated Charter Angler Trips	Average Anglers per boat	Estimated Vessel Trips	Trips Sampled Dockside	Number of Telephone Surveys	Responded	No contact	Refused
2019	168,571	3.54	47,628	176	5,729	68%	31%	1%
2020	115,424	3.70	31,200	166	5,617	70%	29%	1%
2021	163,233	3.33	48,970	251	6,148	66%	28%	1%
2022	162,620	3.29	49,459	146	5,218	68%	30%	2%
2023	177,812	3.30	53,828	193	6,282	65%	34%	1%

### 1.2.3 Southeast Regional Headboat Survey

A subset of for-hire vessels that generally meet the criteria of a headboat (see below) are selected by NMFS Southeast Fisheries Science Center (SEFSC) to report fisheries data via the Southeast Regional Headboat Survey (SRHS). This program focuses on the larger capacity for-hire vessels and collects vessel specific information about catch and effort. Some vessels function as headboats but are not selected for SRHS. This distinction is necessary as the generally accepted description of charter vessels does not adequately capture or describe all vessels participating in the for-hire sector. For example, the definitions noted below rely heavily on passenger capacity and payment method. In practice, some vessels with passenger capacity greater than six may operate as a charter vessel or headboat. Reporting effort and landings information is mandatory in the SRHS (Table 1.2.3.1).

#### Charter vessel

"A charter vessel is less than 100 gross tons (90.8 metric tons) that meets the requirements of the U.S. Coast Guard to carry six or fewer passengers on a for-hire trip and that engages in charter fishing at any time during the calendar year. 50 CFR. § 622.2"

#### Headboat

"A vessel that holds a valid Certificate of Inspection (COI) issued by the U.S. Coast Guard to carry more than six passengers for hire 50 CFR. § 622.2."

For the purposes of the SRHS, headboats are distinct from charterboats. For the Gulf SRHS program, headboats included in the survey are licensed to carry greater than or equal to 15 passengers and charge primarily per angler (i.e. by the "head"). Headboats generally target reef fish and coastal migratory pelagic species on hull day (~8 hours) or partial day (~4 hours) trips. Some vessels can carry a maximum of nearly a hundred passengers.<sup>4</sup>

**Table 1.2.3.1** Required data reporting elements for headboats participating in the SRHS.

Reporting Elements
Vessel name/Vessel number
Captain's name
Departure date and time
Return date and time
Trip type (charter, headboat, commercial, or private recreational)
Number of anglers and paying passengers
Number of crew
Fuel used (gallons)
Price per gallon
Depths Fished (feet)-Min/Max/Primary
Fishing location (latitude/longitude, degrees, minutes)
Species - numbers kept and released (for released, number descended or vented)

The number of vessels reporting landings to the SRHS (headboats) by Gulf state between 2019 and 2023 are provided in Table 1.2.3.2. The number of vessels with a valid and renewable Gulf charter vessel/headboat permit (excluding vessels reporting landings to the SRHS, charter vessels) by homeport state from 2016 through 2020 are provided in Table 1.2.3.3. Participants in the SRHS can be intercepted by data collection samplers to validate effort and logbook upon returning from a fishing trip. On average, approximately 9% of trips were intercepted by dockside samplers from 2019-2023 (Table 1.2.3.4).

<sup>&</sup>lt;sup>4</sup> https://spo.nmfs.noaa.gov/sites/default/files/pdf-content/mfr7911.pdf

Table 1.2.3.2 The number of vessels reporting landings to SRHS by Gulf state from 2019-2023.

Year	AL	FL	LA	MS	TX	Total
2019	10	41	2	3	16	72
2020	9	39	2	2	16	68
2021	9	40	2	2	17	70
2022	8	40	2	2	16	68
2023	8	41	1	2	16	68

**Table 1.2.3.3** Number of vessels that held a valid and renewable Gulf charter vessel/Headboat permit by homeport state from 2016-2020.

Year	AL	FL	LA	MS	TX	Non- Gulf	Total
2016	135	813	124	35	244	35	1,386
2017	142	820	122	33	228	31	1,376

2023	8,954	642	7.17
		5-year average	5.63

<sup>\*</sup>Years when the number of sampled trips was limited due to safety restrictions from the COVID pandemic.

# 1.3 History of the Southeast For-Hire Integrated Electronic Reporting program

The development of any data collection program requires a suite of data fields to collect pertinent fisheries information, a means to validate the accuracy of the collected data, a final estimation procedure, and a mechanism to enforce program compliance. These elements are needed to increase precision and accuracy of collected effort and catch information, interpret program results, and reduce estimate uncertainty. For example, a dockside intercept by an independent surveyor can be used to validate a logbook report completed by a for-hire vessel operator. When these survey design components are integrated they can produce outputs that can be used for stock assessments (e.g., index for a model), management needs (in-season monitoring or season duration projection analysis), or both.

To increase the accuracy, precision, and timeliness to for-hire data collection in the Gulf, the Council approved an amendment to the Reef Fish FMP and CMP FMP in May 2017 titled, "Modifications to Charter Vessel and Headboat Reporting Requirements" to mandate federally permitted reef fish and CMP for-hire owners and operators to electronically report fishing effort and catch information. This amendment was developed based, in part, on recommendations from a technical subcommittee that was convened in 2014 to develop recommendations to implement electronic reporting for the for-hire vessels in the Gulf and U.S. South Atlantic. The subcommittee was charged with investigating methods to increase the timelines of catch estimates for in-season monitoring, increase the temporal and spatial precision of catch estimates for monitoring, provide vessel-specific catch histories for management, reduce biases associated with catch statistics, and increase stakeholder buy-in and trust around data collection. The report by this group (Appendix B) revealed the trade-offs and limitations on several key aspects of electronic reporting in the for-hire fisheries, such as participation requirements, survey vs census requirement, reporting frequency, data collection applications, accountability measures, validation and estimation requirements, and calibration to existing data stream requirements. Additionally, in September 2016 the Data Collection Technical Committee convened. This Committee identified a minimum number of essential data elements that would be needed to achieve program goals (Appendix C).

Initially the Gulf and South Atlantic Fishery Management Councils developed a joint amendment to implement for-hire electronic reporting in the southeast region. As the intended requirements began to differ between the two Councils, the joint amendment was separated into two amendments, one for each region. Gulf federal for-hire permit holders were required to submit trip declarations for every movement the vessel made on water and, a logbook for every for-hire fishing trip, land only at approved landing locations, report prior to offloading, and have an on-board Vessel Monitoring System (VMS) to log vessel positional data was required. The South Atlantic Southeast For-hire Integrated Electronic Reporting (SEFHIER) program only requires weekly reporting for federally permitted fishermen in the Atlantic, and does not have a declaration or VMS requirement. Owners and operators of vessels that have both a federal South Atlantic and a Gulf for-hire permit were required to meet the Gulf SEFHIER program's more stringent program requirements. Owners and operators of vessels that have both a Greater

Atlantic or Mid-Atlantic and a Gulf federal for-hire permit were required to report to the Gulf SEFHIER program.

Dual permitted vessels that had both a federal Gulf for-hire and a commercial reef fish permit had to meet the reporting requirements of both the charter/headboat permit and the commercial reef fish permit. The Gulf SEFHIER trip declaration form was a combined hail-in/hail-out (whereas commercial reef fish requires a separate hail-in/hail-out at the start and end of the trip, respectively). In contrast, the commercial reef fish forms have slightly different data fields than the SEFHIER declaration form, and dual permitted (commercial and for-hire) vessels had to declare their trip to each program separately. This created unnecessary burden on dual commercial reef fish and for-hire permitted vessels. If a dual permitted federal commercial reef fish and for-hire permitted vessel was taking a commercial trip then a SEFHIER logbook was not required for SEFHIER; a logbook was only required when that vessel was taking a for-hire fishing trip. For vessels with a federal South Atlantic for-hire permit and a commercial reef fish permit, separate did not fish reports were required, meeting the reporting frequency required by the stricter of the two permit types.

Prior to this amendment, an exempted fishing permit (EFP) was authorized to evaluate the viability of an allocation-based management strategy for improving the conservation of marine resources and economic stability and performance of the headboat fleet (site the report here published in 2018). This EFP utilized an electronic reporting system to track all transactions in real-time and utilized the federal commercial reef fish VMS. For Headboat vessels that participated in this program, the VMS hardware and software was used to submit trip declarations and pre-landing notifications, and track positioning of the vessels. The VMS enabled a transparent monitoring system for the selected vessels. Vessels were also required to land only at approved landing sites. The final report's conclusions acknowledged the challenges and successes of the program. The report found that there was a learning curve for captains in using the VMS hardware/software system to submit declarations and pre-landing notifications. Despite the low participation level, this program required staff at state agencies to send weekly emails to remind captains to submit their information in the time required. The report also acknowledged that biological samples of sufficient sample size by region were needed to adequately converted numbers of fish caught into pounds of fish. Insufficient sample sizes by region would reduce the certainty of the estimate for pounds landed, especially as many quotas are in pounds of fish and not the number of fish. Port agents and law enforcement officers and agents provided feedback about the program, highlighting the benefit of having email notification of declarations and pre-landing notifications, the benefit of landing locations, and estimated the number of fish on board (as opposed to an estimated weight). This program used a 1-hour notification for pre-landing information which was deemed insufficient by law enforcement based on breadth of the areas they cover. Law enforcement suggested future programs adopt a 3-hour notification window or combining together the declaration with critical pre-landing notification.

The Gulf SEHFIER program was implemented in two phases, requiring trip reporting beginning on January 4, 2021, and then requiring VMS units by March 1, 2022. The trip reporting phase required all for-hire vessels not in the SRHS to report to the Gulf SEFHIER program. Vessels in SRHS were still required to report to the SRHS program, but had additional reporting

requirements. NMFS created technical specifications, publicly available to software developers, to allow vendors to create an application for use within the SEFHIER program. All vendors needed to have their hardware/software devices type approved by NMFS before their application could be used in the Gulf SEFHIER program. Type approval included rigorous testing of the application to ensure it met the technical requirements. A NMFS collaborative partner group and software vendor application were approved for use: Atlantic Coastal Cooperative Statistical Program's eTRIPS/Mobile – version 2 application and Bluefin Data's VESL application. As part of the type approval, vendors were required to maintain 24/7 customer service help for their application users.

Once SEFHIER was implemented, two major concerns from program participants were brought to the Council. The first was apprehension among the industry that should their VMS unit incur an unexpected malfunction it would result in the vessel being unable to move on the water until the VMS unit was repaired – potentially resulting in a loss of revenue for the for-hire operator. In response, the Council and NMFS developed a framework action that would allow for an exemption to the VMS requirement in the event of an unanticipated VMS failure. A second concern was raised regarding the requirement that a vessel must declare every time the vessel intends to move on water. This included non-fishing activities (e.g., obtaining fuel, ice). Program participants argued that the objective of the program was monitoring for-hire fishing effort and that non-fishing declarations were overly burdensome. To address this issue, the Council and NMFS developed a second framework action that only required a federal for-hire vessels to declare for any type of fishing or chartered activity. Both of these framework actions had been approved by the Council and transmitted to NMFS for review but had not been implemented before the program was set aside by the Fifth Circuit Court.

On February 23, 2023, the United State Court of Appeals for the Fifth Circuit set aside the Gulf SEFHIER final rule. The court concluded that based on the evidence in the administrative record the Magnuson-Stevens Fishery Conservation and Management Act did not authorize NMFS to require the 24-hour 7-day-per-week VMS. The Court also concluded that the rule was not promulgated in compliance with the Administrative Procedure Act because NMFS failed to address comments that raised privacy concerns under the Fourth Amendment to U.S. Constitution and did not provide proper notice that the logbook would require the type of economic data required in the final rule. Due to this ruling, the regulations that were in effect prior to the implementation of the Gulf SEFHIER program apply and vessels that hold only a federal Gulf for-hire permit are not required to report to SEFHIER or use a VMS, Gulf for-hire permitted vessels selected to report to the SRHS program are still required to report to SRHS as they did prior to implementation of SEFHIER (i.e., weekly electronic reports). The MRIP for-hire telephone survey (along with APAIS; in the states of Mississippi, Alabama, and Florida), LA Creel, and the Texas Parks and Wildlife creel survey are still in place.

<sup>&</sup>lt;sup>5</sup> https://gulfcouncil.org/wp-content/uploads/VMS-Failure-FA\_FINAL\_9.8.22.pdf

<sup>&</sup>lt;sup>6</sup> https://gulfcouncil.org/wp-content/uploads/F-4a-Abbr-FA-Trip-Declaration-Mods-1.20.23.pdf

<sup>&</sup>lt;sup>7</sup> The Court considered the plaintiffs argument that the VMS requirement violated the Fourth Amendment and expressed concerns, based on the evidence in the record, about the requirement as applied to for-hire vessels but did not rule on this issue.

In April 2023, the Council decided to start work on a new amendment to reinstate some version of the Gulf SEFHIER program.<sup>8</sup> To aid in this effort, the Council established an Ad-hoc Charter For-hire Data Collection Advisory Panel (AP) and established a charge for the group. The AP convened January 10-11<sup>th</sup>, 2024, and made a series of recommendations to the Council. 10 The AP recommended several program goals and objectives as modified from the 2014 Technical Report and these objectives were approved by the Council at their January 2024 meeting (Table 1.3.1).

**Table 1.3.1** Charter For-hire Data Collection AP proposed program objectives to reestablish a Gulf charter for-hire data collection program. The Council has reviewed and approved the below program objectives.

Proposed objectives for new charter for-hire data collection program			
Increase the timeliness of catch estimates for in-season monitoring			
Increase the temporal (and/or spatial) precision of catch estimates for monitoring			
Reduce biases associated with collection of catch and effort data			
Increase stakeholder trust and buy-in associated with data collection			

Additionally, during the Council's January 2024 meeting, the Council made several motions that would maintain a number of the same components from the original Gulf SEFHIER program, consistent with the Ad-hoc Charter For-hire Data Collection AP recommendations. These components include requiring trip declarations and logbooks (Table 1.3.2), maintaining the same trip-level reporting frequency and the same considerations for at-sea safety (where a logbook could be completed within 30 minutes of docking, but before offloading catch). However, the AP recommended that trip declarations be required only for for-hire fishing trips.

<sup>8</sup> https://gulfcouncil.org/wp-content/uploads/GMFMC\_Motions-Report\_Apr2023-FINAL.pdf

<sup>&</sup>lt;sup>9</sup> https://gulfcouncil.org/wp-content/uploads/04.-Council-charge-to-AP.pdf

<sup>&</sup>lt;sup>10</sup> https://gulfcouncil.org/wp-content/uploads/AdHocCharterForHireAP\_meeting-summary\_1\_16\_24.pdf

**Table 1.3.2** List of suggested trip declaration and logbook data fields to be retained from the original Gulf SEFHIER program. These data fields were endorsed by the Ad-hoc Charter Forhire Data Collection AP and subsequently recommended by the Council.

Trip Declaration Data Fields	Logbook Data fields
Vessel registration number	Actual start and return date/time
Captain's name	Angler and passenger count
Departure date and time	Crew count
Estimated return data and time	General area fished
Departure location	Average depth fished
Trip type	Individual species data (whether kept or
	discarded)
	Whether fishing occurred (Yes/No)
	Primary gear used
	Primary target species

## 1.4 Purpose and Need

The *purpose* of this amendment is to improve the accuracy, precision, and timeliness of landings, discards, and fishing effort data from charter vessels in the for-hire component of the recreational sector of the Gulf reef fish and CMP fisheries. Improvements would increase stakeholder trust and buy-in associated with data collection. Another purpose is to collect social and economic information related to the operation of federally permitted for-hire vessels participating in the Gulf reef fish and CMP fisheries.

The *need* for this action is to improve management and monitoring of the for-hire component of the recreational sector of Gulf reef fish and CMP fisheries to prevent overfishing.

## 1.5 Management history

#### **Reef Fish Fishery**

The following amendments to the Reef Fish FMP contain actions that pertain to the for-hire component of the recreational sector, including permit and reporting requirements.

**Amendment 11** (1996) to the Reef Fish FMP required that charter vessels and headboats fishing in the Gulf exclusive economic zone (EEZ) have federal permits when fishing.

**Amendment 20** (2002) to the Reef Fish FMP/Amendment 14 to the CMP FMP established a three-year moratorium on the issuance of charter vessel/headboat permits for reef fish and CMP in the EEZ of the Gulf. The purpose of this moratorium was to limit future expansion in the recreational for-hire fisheries while the Council monitors the impact of the moratorium and considers the need for a more comprehensive effort management system for the for-hire fleet.

NMFS' promulgation of the regulations implementing Reef Fish Amendment 20/CMP Amendment 14 established an effective date of December 26, 2002, for-hire operators in the Gulf EEZ to have a valid limited access "moratorium permit," in place of the prior open access charter vessel/headboat permit. From this date, limited access permits would be required for for-hire vessels to legally engage in fishing activities in the Gulf EEZ.

On December 17, 2002, NMFS published an **Emergency Rule** that deferred implementation of the permit moratorium from December 26, 2002, until June 16, 2003, because the final rule implementing the permit moratorium contained an error regarding eligibility. This error needed to be resolved before the moratorium could take effect to ensure that no qualified participants were wrongfully excluded. The emergency automatically extended the expiration date of valid or renewable "open access" permits for reef fish and CMP until June 16, 2003. The emergency rule included additional measures that extended deadlines for issuance of "moratorium permits" and the appeal process.

**Amendment 25** (2006) to the Reef Fish FMP/Amendment 17 to the CMP FMP established a limited access system on charter vessel/headboat permits for reef fish and CMP that extended the 3-year permit moratorium. Permits are renewable and transferable in the same manner as currently prescribed for such permits. The Council will have periodic review at least every 10 years on the effectiveness of the limited access system.

**Amendment 30B** (2009) to the Reef Fish FMP required that all vessels with federal commercial or charter vessel/headboat permit for reef fish comply with federal reef fish regulations, if those regulations are more strict than state regulations, when fishing in state waters.

**Amendment 34** (2012) to the Reef Fish FMP addressed crew size limits for dual-permitted vessels. Dual-permitted vessels are vessels with both a charter/headboat reef fish permit and a commercial reef fish permit. The amendment eliminated the earned income qualification requirement for the renewal of commercial reef fish permits and increased the maximum crew size, when operating as a commercial vessel, from three to four.

**Framework Action** (2013) modified the frequency of headboat reporting to a weekly basis (or at intervals shorter than a week if notified by the SRD) via electronic reporting, with reports due by 11:59 p.m., local time, the Sunday following a reporting week. If no fishing activity occurs during a reporting week, an electronic report so stating must be submitted for that week.

Amendment 40 was approved in April 2015. This amendment divided the recreational red snapper quota into two component subquotas, with the federal for-hire component allocated 42.3% of the recreational quota and the private angling component allocated 57.7% of the red snapper recreational quota. This division sunsets three calendar years after implementation. Season closures are determined separately for each component based on the component's annual catch target (ACT). The final rule to implement this amendment published on April 22, 2015.

#### **CMP Fishery**

The following amendments to the CMP FMP contained actions that pertained to the for-hire sector including permit and reporting requirements.

**Amendment 2** (1987) to the CMP FMP required that charter vessels and headboats fishing in the EEZ of the Gulf or Atlantic for CMP species have federal permits.

**Amendment 14** (2002) to the CMP FMP/Amendment 20 to the Reef Fish FMP established a 3-year moratorium on the issuance of charter vessel/headboat permits. See discussion above for Amendment 20 to the Reef Fish FMP, which describes the amendment and corresponding Emergency Rule.

**Amendment 17** (2006) to the CMP FMP/Amendment 25 to the Reef Fish FMP established a limited access system on charter vessel/headboat permits for reef fish and CMP permits. Permits are renewable and transferable in the same manner as currently prescribed for such permits. The Council will have a periodic review at least every 10 years on the effectiveness of the limited access system.

**Framework Action** (2013) modified the frequency of headboat reporting to a weekly basis (or at intervals shorter than a week if notified by the SRD via electronic reporting, with reports due by 11:59 p.m., local time, the Sunday following a reporting week. If no fishing activity occurs during a reporting week, an electronic report so stating must be submitted for that week.

Amendment 20A (2014) to the CMP FMP prohibited the sale of recreationally caught king and Spanish mackerel with the following exceptions: 1) the sale of fish caught on for-hire trips on dual-permitted vessels in the Gulf region, and 2) the sale of fish caught in state-permitted tournaments in both the Gulf and Atlantic regions and donated to a state or federally permitted dealer, as long as the proceeds from the dealer sale are donated to charity.

### CHAPTER 2. MANAGEMENT ALTERNATIVES

## 2.1 Action 1: Establish Frequency and Mechanism of Data Reporting for Charter For-hire Vessels

This action only applies to vessels issued a valid Gulf of Mexico (Gulf) charter vessel/headboat permit for reef fish or Gulf coastal migratory pelagic (CMP) species, that *do not* participate in the National Marine Fisheries Service (NMFS) Southeast Regional Headboat Survey (SRHS).

Alternative 1: No Action. The owner or operator of a charter vessel or headboat issued a valid Gulf charter vessel/headboat permit for reef fish or CMP species, or whose vessel fishes for or harvests such reef fish or CMP species in or from state waters adjoining the applicable Gulf or Gulf exclusive economic zone (EEZ), and who is selected to report by the National Marine Fisheries Service (NMFS) through the Marine Recreational Information Program (MRIP), or the state of Louisiana's LA Creel program, or Texas Parks and Wildlife Creel survey voluntarily report catch information when requested by a dockside surveyor.

**Alternative 2:** Require that the owner or operator of a charter vessel of headboat issued a valid charter vessel/headboat permit for reef fish or Gulf CMP species to submit fishing records for *each trip* via electronic reporting (via NMFS approved hardware and/or software). If fish are harvested during the trip, electronic reporting is required prior to offloading fish.

**Alternative 3:** Require that the owner or operator of a charter vessel or Headboat issued a valid Gulf charter/headboat permit for reef fish or CMP species to submit fishing records *daily* via electronic reporting (via NMFS approved hardware and/or software). Daily means by 12 PM (noon local time) of the following day.

#### **Discussion:**

Alternative 1 would maintain the reporting requirements of the three charter for-hire data collection programs within the Gulf. The details of these current data collection programs are outlined in Chapter 1. LA Creel provides weekly estimates of catch in the for-hire sector, while MRIP generates 2-month "wave" estimates, and Texas Parks and Wildlife provides 6-month catch estimates for the for-hire sector. The three programs have a dockside intercept component to verify catch by a program sampler. Sampling sites are selected using a probabilistic survey design approach based on high use or low use areas. No private landings sites are sampled in these programs and submission of catch data is voluntary for the angler. Dockside intercepts are conducted on the fishing angler and not necessarily the charter/headboat vessel owner or operator.

The precision level of catch estimation in **Alternative 1** (ranging from weekly to months) is less than that considered in either **Alternative 2** or **3** (trip-level or daily). As data timeliness, precision, and accuracy have been identified as goals for a new Gulf charter for-hire data collection program, an increase in reporting frequency would best achieve this objective.

**Alternatives 2** and **3** would require the owner or operator of a charter vessel that has been issued a charter vessel/headboat permit for Gulf reef fish or Gulf CMP species to submit fishing records electronically via a NMFS-approved hardware/software device at the specified frequencies. This in itself would add technological complexity compared to the status quo (**Alternative 1**), and would still require some application of dockside intercepts to verify participant reports. However, it is anticipated to greatly improve landings estimates for annual catch limit (ACL) monitoring and improve law enforcement's ability to validate self-reported catch data with the actual landings on a per-trip basis.

Alternative 2 would require vessel owners or operators with a charter vessel/headboat permit for Gulf reef fish or Gulf CMP species to submit a report for each trip. This report would need to be submitted electronically and received by NMFS. If fish are harvested, an electronic report would need to be made prior to offloading fish from the vessel. If no fish are retained on a for-hire trip, the report would have to be submitted within 30 minutes of arriving at the dock (end of the trip). If more than one trip occurred on a single day, an electronic report would need to be submitted before offloading fish at the end of each trip. Under Alternative 2, the reported catch of a charter vessel can be verified by an enforcement officer or port agent when the vessel returns to the dock and offloads fish, reducing the likelihood of misreporting. However, Alternative 2 offers charter vessel operators the least flexibility in how and when they prepare and submit their fishing reports. Alternative 2 should improve data quality and accuracy by reducing recall bias, improve stakeholder confidence, and reduce uncertainty associated with these data when used in science or management applications. To accomplish trip-level reporting, charter vessel operators would need to have a NMFS-approved electronic device on their vessel to submit the report.

Similarly, **Alternative 3** would require reporting by vessel owners and operators but at daily level rather than a trip level as stipulated in **Alternative 2**. However, the Gulf of Mexico Fishery Management Council's (Council) Charter For-hire Ad hoc Advisory Panel (AP) discussed the possibility of reporting frequencies other than trip level. Several AP members advocated for the trip level reporting frequency, rather than daily or weekly reporting. They indicated that, during the busy summer months especially, logbook data can be difficult to tabulate during multi-trip days or over the course of a week. The volume of catch can be substantial over several trips which results in more time spent by the vessel owner or operator to filling out logbook forms. Additionally, several AP members reported that memory retention was better when considering catch at a trip level, which not only lessened the amount of time to complete the logbook but also increased the accuracy of their data reporting.

In 2020, NMFS implemented a fishery management plan (FMP) amendment developed by the South Atlantic Fishery Management Council (South Atlantic Council) that requires charter vessels with South Atlantic federal charter vessel/headboat permits, while operating as a charter vessel to submit fishing records to NMFS weekly, or at intervals shorter than a week if notified by NMFS via electronic reporting (via NMFS approved hardware and software) (85 FR 10331 Feb. 24, 2020). Weekly reporting represents a level of precision that is difficult to directly input into a stock assessment analysis and less uncertain when informing management advice such as season duration projections. For these reasons, and those recommended by the AP, the Gulf Council does not consider weekly reporting frequency as a reasonable alternative because it would not achieve the data collection program's purpose and need.

A South Atlantic for-hire vessel permittee who is also subject to electronic reporting requirements in other regions is required to comply with the Federal electronic reporting program that is more stringent, regardless of where they are fishing. This requirement was put in place to prevent vessels with multiple permits from having to report to multiple systems. Because the Gulf reporting requirements considered in this action would require trip-level or daily reporting, the Gulf requirements may be considered more stringent than the South Atlantic weekly reporting requirements if the same data elements are required. Under those circumstance, vessels issued both Gulf and South Atlantic federal permits would be able to comply with both programs by complying with the Gulf requirements. Greater Atlantic Regional Fishery Office (GARFO) permitted vessels or vessels with a federal permit from any other region possessing a Gulf charter/headboat reef fish or CMP permit would be required to submit two fishing records: once in accordance with GARFO (or other region) requirements and once in accordance with the Gulf charter/headboat reef fish or CMP permit reporting requirements. However, few Gulfpermitted vessels travel the distance necessary to fish in areas other than the South Atlantic. In the future, these systems and fishing record requirements may become exchangeable but, until such time, these vessels would be required to report twice.

If a vessel owner who was issued a Highly Migratory Species (HMS) Charter/Headboat permit also has a permit issued in a non-HMS fishery that is required to report, any landings should be reported, as required, under the appropriate NMFS regional vessel logbook program in addition to any HMS reporting requirements. NMFS is considering management options to modify or expand reporting requirements for Atlantic HMS, as outlined in an Advance Notice of Proposed Rulemaking (ANPR) published on May 12, 2023. Currently, owners or operators of HMS Charter/Headboat permitted vessels must call in or electronically report all bluefin tuna landings and dead discards, all non-tournament landings of Atlantic blue marlin, Atlantic white marlin, roundscale spearfish, and Atlantic sailfish, and all non-tournament and non-commercial landings of North Atlantic swordfish to NMFS within 24 hours of completing a trip. In the ANPR, NMFS is considering an electronic logbook requirement for owners or operators of vessels with HMS Charter/Headboat permits, as well as timing requirements for submission of electronic logbooks.

# 2.2 Action 2: Modify Frequency and Mechanism of Data Reporting for Headboats

This action only applies to vessels issued a valid charter vessel/headboat permit for reef fish or Gulf coastal migratory pelagic (CMP) species that *do participate* in the SRHS.

Alternative 1: No Action. The owner or operator of a charter vessel or headboat issued a valid charter vessel/headboat permit for reef fish or Gulf CMP species, or whose vessel fishes for or harvests such reef fish or CMP species in or from state waters adjoining the applicable Gulf of Mexico or Gulf EEZ, and who is selected to report by NMFS must submit an electronic fishing record for each trip of all fish harvested via the SRHS. Electronic fishing records must be submitted at weekly intervals (or intervals shorter than a week if notified by NMFS) by 11:59 p.m., local time, the Sunday following a reporting week. If no fishing activity occurred during a reporting week, an electronic report stating so must be submitted for that reporting week by 11:59 p.m., local time, the Sunday following a reporting week. Information to be reported is indicated on the form and its accompanying instructions.

**Alternative 2:** Require that the owner or operator of a charter vessel or headboat issued a valid charter vessel/headboat permit for reef fish or Gulf CMP species to submit fishing records for *each trip* via electronic reporting (via NMFS approved hardware and/or software). If fish are harvested during the trip, electronic reporting is required prior to offloading fish.

**Alternative 3:** Require that the owner or operator of a charter vessel or headboat issued a valid charter vessel/headboat permit for reef fish or Gulf CMP species to submit *daily* fishing records via electronic reporting (via NMFS approved hardware and/or software). Daily means by 12 p.m. (noon local time) of the following day.

#### **Discussion:**

Alternative 1 (No Action) would continue to require the owner or operator of a federally permitted headboat with a Gulf charter/headboat for reef fish or CMP permit to submit electronic fishing reports weekly (or at intervals less than a week if requested by NMFS), due 7 days after the end of each week (Sunday). This requirement was implemented through the Framework Action to Modify Headboat Reporting Requirements in the Gulf and South Atlantic (GMFMC 2013b). The SRHS represents a relatively long-term data collection program within the Gulf and has been used as a fishery-dependent intext to inform several species stock assessments. However, the SRHS is limited to only small number of vessels which meet the program's definition of a headboat and are included in the survey. Since headboats represent a fraction (~10%) of all federally permitted charter for-hire vessels in the Gulf and are unique in their operations (taking large numbers [some up to ~ 100] of paying passengers on a single trip), and additional data collection survey extended to other participants in the industry is desirable for fishery management.

**Alternative 2** would require the owner or operator of a federally permitted headboat with a Gulf charter/headboat for reef fish or CMP permit to submit an electronic report for each trip to NMFS prior to offloading fish. If no fish are retained on a for-hire trip, the report would have to

be submitted within 30 minutes of arriving at the dock (end of the trip). If more than one trip occurred on a single day, an electronic report would need to be submitted before offloading fish at the end of each trip. **Alternative 2** would offer the greatest ability to prevent ACL overages and minimize errors associated with recall bias. Under **Alternative 2**, the reported catch could be verified by an enforcement officer or port agent soon after the vessel arrives at the dock, reducing the likelihood of unintentional misreporting. However, **Alternative 2** offers headboat operators the least flexibility in how and when they prepare and submit their trip reports and could be burdensome during periods of peak activity or inclement weather. **Alternative 2** should improve data quality and accuracy, improve stakeholder confidence, and reduce uncertainty associated with these data when used in science or management applications.

Alternative 3 would require the owner or operator of a federally permitted headboat with a Gulf charter/headboat for reef fish or CMP permit to submit a daily, electronic report to NMFS by noon the day following each for-hire fishing trip. Alternative 3 could further reduce the likelihood of exceeding ACLs and reduce recall error compared to Alternative 1 but would not result in as much of a reduction relative to Alternative 2. Alternative 3 would add additional burden and reduce flexibility in comparison to Alternative 1; however, increased memory recall (therefore quicker completion of logbooks) may better realized in Alternative 2 with trip level reporting.

## 2.3 Action 3: Trip Notification and Effort Reporting Requirements

**Alternative 1:** No Action. There are currently no trip notification requirements for permitted reef fish or Gulf CMP species charter/headboat vessels. A vessel issued a federal commercial reef fish permit is required to submit a trip notification and declare the intent of the trip.

**Alternative 2:** Require that the owner or operator of a charter vessel or headboat issued a valid charter vessel/headboat permit for reef fish or Gulf CMP species submit a trip declaration for trips that will be engaging in any type of fishing or chartered activity.

**Option a**: Charter vessels **Option b**: Headboats

#### **Discussion:**

Action 3 considers adding a requirement to provide a notification to NMFS declaring the intent to initiate a for-hire trip, return from a for-hire trip, or both. This action is anticipated to provide better estimates of effort with an improved validation process as compared to the current MRIP phone survey (charter vessels) and SRHS (headboats). This action is also anticipated to better inform law enforcement officers when a for-hire vessel is leaving the dock as well as the type of trip based on the declaration at hail-out. Under **Alternative 1** (No Action), federally permitted for-hire vessels do not have any trip notification requirements.

Alternative 2 would require trip declarations only for trips engaging in any type of fishing or any chartered activity. Fishing activity would include commercial, for-hire, and private recreational fishing activities, as well as trips that collect bait. Chartered activity would include any other activity with paying passengers<sup>11</sup> on board the vessel, such as sunset or dolphin cruises. Alternative 2 would provide the for-hire fleet the flexibility to complete non-fishing non-charted activities. Requiring declarations for trips engaging in fishing or any chartered activity would also assist in determining fleet characteristics (e.g., percentage of time for other activities like cruises to supplement business or commercial activity), and decreases the administrative burden for a charter for-hire data collection program through use of automation to identify non-compliance. Alternative 2 does not specify any time limit for non-fishing and non-chartered activities, which would not require a declaration. Vessels would have an unlimited amount of time to engage in non-fishing activities (e.g., traveling to pick up clients, traveling to fuel the vessel).

A mandatory trip declaration (**Alternative 2**) would improve effort estimates as it would directly tabulate the number of fishing trips in comparison to **Alternative 1** that relies on a sample of the fleet and is subject to assumptions that the sample represents the behavior of the entire fleet and

<sup>&</sup>lt;sup>11</sup> In the definition of "charter fishing" the Magnuson-Stevens Fishery and Conservation Management Act (MSA) refers to "passenger for hire" as defined in 46 U.S. Code § 2101. That "means a passenger for whom consideration is contributed as a condition of carriage on the vessel, whether directly or indirectly flowing to the owner, charterer, operator, agent, or any other person having an interest in the vessel." Consideration means "an economic benefit, inducement, right, or profit including pecuniary payment accruing to an individual, person, or entity, but not including a voluntary sharing of the actual expenses of the voyage, by monetary contribution or donation of fuel, food, beverage, or other supplies."

is associated with uncertainty when expanding the sample estimates to the behavior of the entire fleet. The MRIP For-hire telephone survey has observed a non-contact percentage of up to 32% since 2019 (Section 1.2.1 and Table 1.2.12.). The telephone effort survey portion of the state of Louisiana's LA Creel program has a comparable non-contact rate (up to 34%) to that of MRIP since 2019 (Table 1.2.2.3). Non-compliance in effort estimates results in substantial uncertainty which affects total catch estimates. This uncertainty also makes in-season catch level monitoring arduous. Timeliness in data collection is a main objective of the Gulf Council's charter for-hire data collection program; therefore, mandatory declarations that improve estimates of effort, aid laws enforcement, and improve dockside intercept efficiency to verify catch is necessary to achieve the program's purpose and need.

During the implementation of the original Gulf SEFHIER program, several participants raised concerns with the Council that the trip declaration, which was required every time the vessel left a dock, was overly burdensome. To address this issue, the Council developed a framework action to modify the trip declaration, but that action was not implemented because the Gulf SEFHIER program was set aside (see Section 1.3). The language reflected in **Alternative 2** is the same language approved by the Council in the previous framework action. This alternative, in addition to providing the benefits noted above relative to the status quo (**Alternative 1**), would also address a previous issue from the SEFHIER program and account for this situation during the development of a new charter for-hire data collection program.

# APPENDIX A. HEADBOAT COLLABORATIVE PILOT STUDY

#### **Headboat Collaborative Background**

On August 26, 2013, the National Marine Fisheries Service (NMFS) announced approval and issuance of the exempted fishing permit (EFP) for the Headboat Collaborative (HBC) pilot program. The purpose of the HBC pilot program was to evaluate the viability of an allocation-based management strategy for improving the conservation of marine resources and economic stability and performance of the headboat sector. Headboats participating in the pilot program were authorized to harvest red snapper and gag using quota allocation outside the designated recreational fishing seasons (e.g., red snapper begins June 1 and gag begins July 1). The EFP proposed evaluating the efficacy of an allocation-based management system using a limited number of headboats in a 2-year pilot study. Since the EFP was neither a fishery management plan (FMP) nor a plan amendment, and was based on legal authority independent from the FMP, NMFS determined that it was not subject to referendum requirements.

To ensure 100% catch accountability and to enable a transparent monitoring system, HBC vessels adhered to strict protocols to track each fish caught and landed during a trip. Each vessel had an operational vessel monitoring system (VMS) that allowed NMFS to track the vessel while at sea. Vessel owners were responsible for purchasing VMS units (\$1,799 per unit), coordinating installation with the vendor, and paying for monthly service costs (~\$60 per month). All vessels used the CLS America VMS unit with the Thorium tablet. CLS America built customized software forms so that HBC participants could have a simple and fast way to enter information. HBC participants submitted a VMS declaration (hail-out) through the VMS unit prior to departing on every trip, regardless of whether or not red snapper or gag were the intended target species. Participants submitted a landing notification (hail-in) through the VMS unit at least one hour prior to returning to port regardless of whether or not red snapper or gag were landed. Hail-ins contained the vessel name, landing location, time of landing, and the number of red snapper and gag landed. The hail-in requirement was intended to provide law enforcement agents/officers and port agents the opportunity to be present at the point of landing so they could monitor and enforce the HBC EFP requirements dockside. Landing conditions required that HBC vessels only land at approved landing locations. Approved landing locations ensured sites actually exist and law enforcement officers and port agents could access these sites. Landing locations must be publicly accessible by land and water.

#### VMS Screenshots of the HBC declaration and landing notification forms

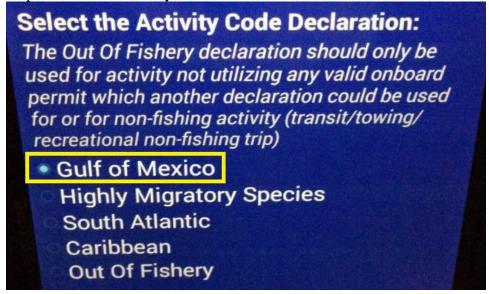

The HBC pilot study used a single VMS vendor, which created the declaration (hail-out) and landing notification (hail-in) forms based on requirements in the EFP and input from NMFS.

#### **Declaration Screens**

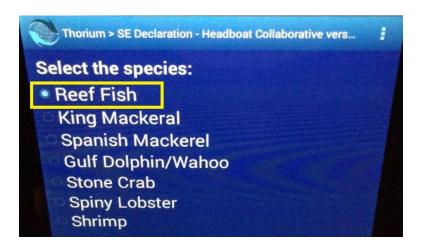

Step 1. Under SE Declaration, select the SE Declaration – Headboat Collaborative.

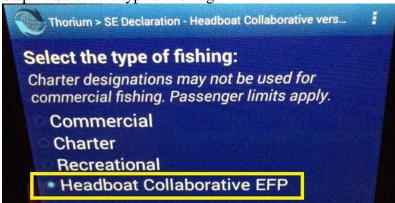

Step 2. Select the activity code for the declaration.

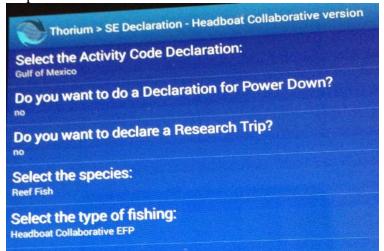

Step 3. Select the species that will be targeted during the trip.

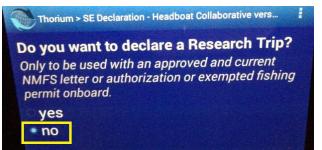

Step 4. Select the type of fishing

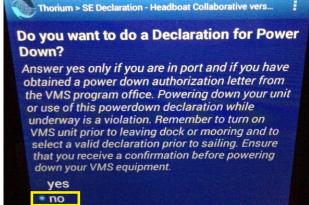

Step 5. Review the final declaration confirmation screen and select Submit.

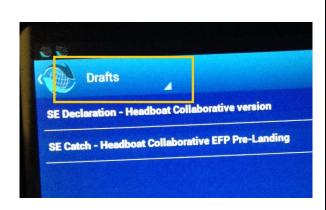

Additional screens: Power Down exemption screen, Research trip declaration, and review submissions.

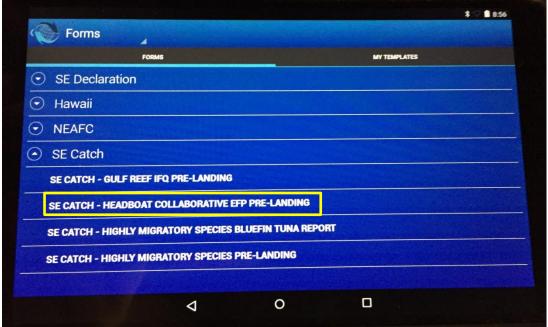

Review Submissions: Users have the ability to view unsent declarations or landing notifications. Under Submissions a green check mark will indicate if the transmission was successfully sent. If a transmission failed, a red X will be displayed.

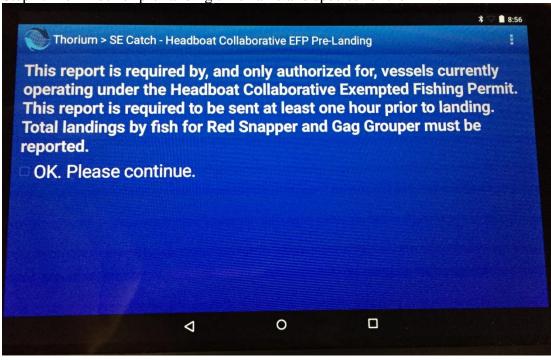

#### **Landing Notifications Screens**

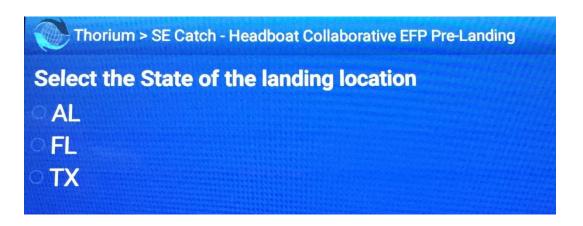

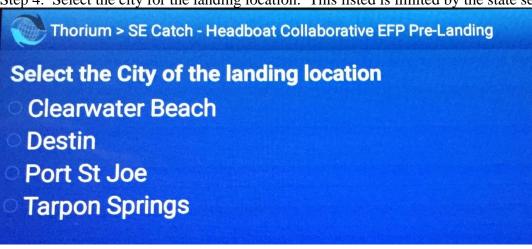

Step 2. Reminder of pre-landing timeframe and species for the EFP.

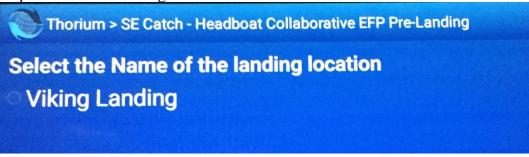

Step 3. Select the state of the landing location.

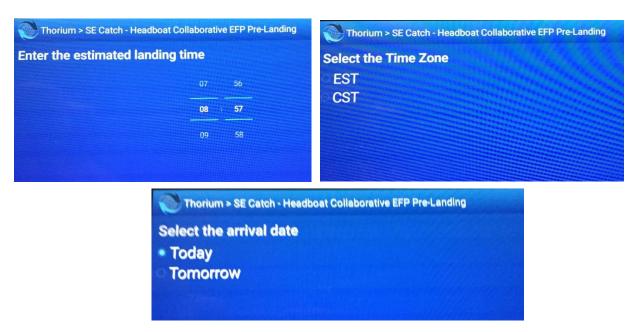

Step 4. Select the city for the landing location. This listed is limited by the state selected.

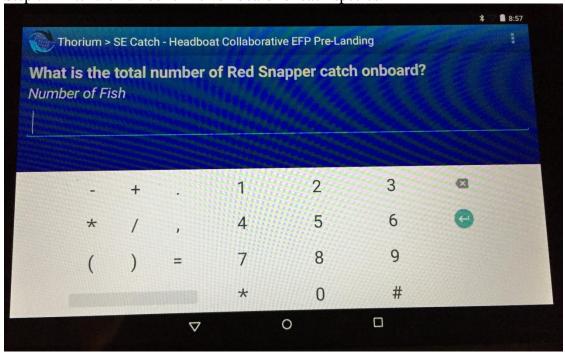

Step 5. Select the landing location name.

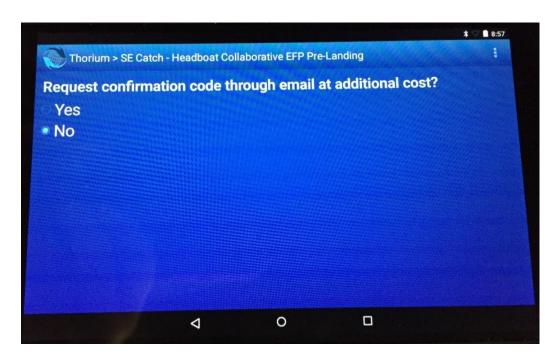

Step 6. Select the estimated landing time, time zone, and day.

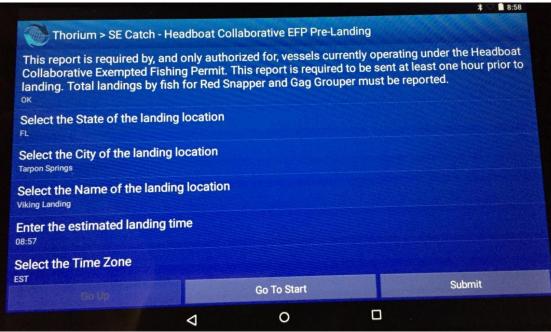

Step 7. Enter the number of fish on board for each species.

Step 8. A pre-confirmation page appears after all the information is submitted.

Step 9. The information collected is summarized and submit after the Submit button has been selected.

### **EXECUTIVE SUMMARY**

Catch from recreational anglers comprises a substantial proportion of total catch for many species in the regions managed by the Gulf of Mexico and South Atlantic Fishery Management Councils. For-hire charter vessels are an important component of the recreational fishery both in terms of fishing effort and harvest. There is a need to improve data collection practices for charter vessels to address evolving needs of science and management and to capitilze on the improvements of emerging electronic reporting technologies. The Gulf of Mexico and South Atlantic Fishery Management Councils are considering changes in management for these purposes and formed a technical subcommittee to provide recomendations to implement electronic logbook reporting for charter vessels in the Gulf of Mexico and South Altantic Fishery Management Councils respective jurisdictions.

Currently, for-hire data collection programs gather information on fishing effort and catch by marine recreational anglers fishing on professionally licensed for-hire vessels (including charter, guide, and large party boats). National Oceanic and Atmospheric Adminstration Fisheries, in coordination with the states, Atlantic Coastal Cooperative Statistics Program, and Fisheris Information Network, support regional programs to collect these statistics, with the ultimate goal of building a system of data collection programs that are responsive to regional needs and are coordinated at the national level to provide standard data elements for both regional and national assessments of fish stocks and associated fisheries management.

The technical subcommittee was formed from state and federal biologists and resource managers that have the requisite experience to develop best practices for an improved for-hire data collection program. The technical subcommitte was instructed to provide these recommendations by December 1, 2014 and this report reflects these recommendations. The group met May 27-28, 2014 and drafted initial recommendations for the Gulf of Mexico and South Atlantic Fishery Management Councils' review. This guidance has been integrated into the report to the extent practibable yet, the recommendations remain those of the technical subcommittee.

The subcommittee recommends a census style, electronic reporting system that builds upon the Gulf of Mexico electronic logbook pilot program, the electronic reporting program for headboats, and the recently implemented electronic dealer reporting program. A brief overview of the recommendations is below:

- Complete census of all participants;
- Mandatory, trip level reporting with weekly electronic submission. Give flexibility to require submission more frequently than weekly if necessary. Give flexibility to declare periods of inactivity in advance;
- Development of compliance tracking procedures that balance timeliness with available staff and funding resources;

- Implementation of accountability measures to ensure compliance;
- Use validation methods developed in the Gulf of Mexico logbook pilot study as a
  basis to ensure that the actual logbook report is validated and standardized validation
  methodologies are employed among regions;
- Minimize reporting burden to anglers by reducing (or preferably eliminating) paper reporting and eliminating duplicate reporting;
- Maintain capability for paper-based reporting during catastrophic conditions;
- Require and maintain a comprehensive permit/email database of participants;
- Develop and implement the program in close coordination with Marine Recreational Information Program, Southeast Regional Office, Southeast Fisheries Science Center, highly migratory species, state agencies, Atlantic Coastal Cooperative Statistics
   Program, and Gulf Fisheries Information Network;
- Include procedures for expanding estimates for non-reporting; and,
- Allow multiple authorized applications or devices to report data as long as they meet required data and transferability standards.

The technical subcommittee has provided these recommendations within the framework of finite fiscal and personnel resources with consideration of reporting burden and technology requirements for charter vessel operators. The recommended program should be flexible enough to accommodate changes in technology or funding availability without compromising the integrity of the long-term data series. The technical subcommittee also realizes that advances in data collection technologies will continue and the program will require evaluation, and likely subsequent improvement to meet the evolving needs of science and management.

### SECTION 1. BACKGROUND

Catch from recreational anglers comprises a substantial proportion of total catch for many species in the regions managed by the Gulf of Mexico and South Atlantic Fishery Management Councils (GMFMC, SAFMC). For-hire data collection programs gather information on fishing effort and catch by marine recreational anglers fishing on professionally licensed for-hire vessels (including charter, guide, and large party boats). National Oceanic Atmospheric Adminstration (NOAA) Fisheries, in coordination with the states, Atlantic Coastal Cooperative Statistics Program (ACCSP), and Fisheries Information Network (FINs), supports regional programs to collect these statistics, with the ultimate goal of building a system of data collection programs that are responsive to regional needs and are coordinated at the national level to provide standard data elements for both regional and national assessments of fish stocks and associated fisheries management.

Recreational harvest from for-hire vessels in the Southeast Region are monitored through a combination of effort and dockside intercept surveys. The Marine Recreational Information Program's (MRIP) for-hire survey (FHS) and the Southeast Region Headboat Survey (SRHS). The FHS estimates charter vessel catches of state and federally managed species off the U.S. Atlantic and Gulf coast states, with the exception of Texas and more recently Louisiana. The Texas Parks and Wildlife Department (TPWD) conducts their own creel survey to estimate private and charter landings. Since 1993, South Carolina has administered a paper-based logbook reporting program for every licensed six-pack charter operator. These data are primarily used for state management and quota monitoring for federally managed species occurs as part of the MRIP for-hire survey. North Carolina is also developing an electronic logbook (ELB) system for their own use with the goal of supplanting the MRIP for-hire survey once fully operational and compatible with MRIP. In recent years, interest by constituents and the Councils has been growing to implement electronic reporting requirements in the for-hire sector. There is general distrust of MRIP landings estimates for the for-hire survey and managers and fishermen have expressed a need for more timely and accurate data to support fishery monitoring, science, and management. Additionally, the National Research Council's (NRC) review of recreational survey methods concluded that in most cases charter boats should be required to maintain logbooks of fish landed and kept. These factors led to an ELB pilot study of Texas and Florida charter vessels in 2010-11 and new electronic reporting regulations for headboats in 2014. Four additional projects have also been funded by MRIP or the National Fish and Wildlife Foundation (NFWF) in 2014 to test new approaches for monitoring charter vessel catch and effort. The GMFMC and SAFMC have also passed motions at recent meetings expressing their interest in electronic reporting by charter vessels and they formed this technical subcommittee to develop recommendations for the Councils' consideration by December 1, 2014, on how to best achieve an electronic reporting system for charter vessels. The technical subcommittee met May 27-28, 2014 to develop recommendations to the Councils. The technical subcommittee reached consensus of several aspects on a proposed program and identified a framework for implementation.

# **SECTION 2. OBJECTIVES**

The Gulf of Mexico and South Atlantic Fishery Management Councils appointed this technical subcommittee (membership list below) to develop recommendations to implement an improved data collection program to support the needs of science, fisheries management, and address stakeholder concerns about data quality and redundancy in reporting. Specifically, the technical subcommittee was charged with developing recommendations to implement electronic reporting for charter vessels in the Gulf of Mexico and US South Atlantic in support of the following objectives:

- Increasing the timeliness of catch estimates for in-season monitoring;
- Increasing the temporal (and/or spatial) precision of catch estimates for monitoring;
- Providing vessel-specific catch histories for management;
- Reducing biases associated with collection of catch statistics; and,
- Increasing stakeholder trust and buy-in associated with data collection.

# SECTION 3. TECHNICAL SUBCOMMITTEE MEMBERS

#### 3.2 Timeline

- May 2014 Technical subcommittee meeting in Tampa, Florida
- June 2014 Provide meeting summary to Councils for review and guidance;
- July 2014 Technical subcommittee conference call to discuss Councils' review and guidance;
- September 2014 Technical subcommittee webinar to discuss items needed to complete the report;
- November 2014 Draft report sent to subcommittee for review;
- December 1, 2014 Provide report to Gulf and South Atlantic Councils.

# **SECTION 4. RECOMMENDATIONS**

The technical subcommittee discussed trade offs and limitations of potential modifications to fisheries reporting in for-hire fisheries. The subcommittee agreed (by consensus) on preferred approaches for several aspects and discussed barriers to implementation of a new program. The subcommittee solicited and received preliminary input from both Councils following the May 27-28 meeting. This guidance has been integrated into the report to the extent practibable yet, the recommendations remain those of the technical subcommittee.

The subcommittee emphasized that the program should *not* be designed around a single species, and should be flexible enough to accommodate different reporting requirements for different segments of the for-hire fleet. For example, if federally permitted vessels were required to report more frequently during the recreational red snapper season, other vessels that do not participate in this fishery should be able to continue reporting at their normal frequency. Similarly, an electronic reporting system should be able to accommodate vessels already required to carry vessel monitoring system (VMS) units for participation in commercial fisheries without necessarily requiring all for-hire vessels to report through VMS. Although not currently required, the Gulf Council expressed interest in using VMS and hail-out, hail-in protocols to improve effort estimates. This practice certainly could improve the quality of effort estimation in the for-hire fleet, although, implemenation would not be without challenges. The cost of a VMS program both in terms of vessel equipment and agency staff/infrastructure would require additional, long-term funding (see section about costs). This may be beyond current resource availability. Rather than recommend fleet-wide implementation of VMS and hail-out, hail-in requirements, the subcommittee recommends structuring the charter fishery monitoring program such that it is scaleable and expandable as management needs, technology, and funding availability change. This recommendation would allow improved data collection in the near term building on the recently implemented electronic reporting system for southeast region headboats (i.e., weekly, electronic reporting) and the Marine Recreational Information Program (MRIP) charter vessel pilot program, yet would not require full implemention of VMS to move beyond the current process.

The current survey methodology was deemed inadequate to meet the objectives posed to the group (although not necessarily the original intent of the charter vessel survey). Specifically, timeliness, bias reduction, and stakeholder buy-in could be improved with an electronic reporting system without the inherant expense and time for implementation of VMS technology in the charter fleet (of course, the introduction of new biases is possible). These improvements are necessary given the requirement to establish annual catch limits for federally managed species and close the fishery when the target harvest level has been caught each year. This requirement for in-season quota monitoring is far beyond the management needs when the original charter vessel survey was designed and implemented and the guidance herein attempts to match the data collection effort to the needs of the current and future fisheries management.

# 4.1 Mandatory or voluntary participation

The technical subcommittee discussed participation in any new charter vessel monitoring program. Specifically, the subcommittee considered if participation in the program by charter vessel owner/operators could be voluntary or if mandatory participation is necessary. Voluntary reporting programs can be advantageous in that reporting burden is reduced (or absent) from participants that do not wish to participate. This would also reduce the number of reports that require processing for catch and effort estimation. However, in absence of a complete sample, estimation procedures are necessary. Estimation procedures can be accurate and robust in a welldesigned survey, however, likely at the expense of reduced timeliness. Developing estimates of total catch from a volunteer program is problematic as the proportion of participants may be highly variable through time or across the survey area and volunteer participants may not be representative of all possible participants in this survey. This pattern has been demonstrated previously (e.g., angler avidity) in other studies of volunteer programs and will bias estimates when expanded to the total sector. Voluntary programs would also require careful consideration of the characteristics of the participants and those who choose not to participate as it is impossible to compare catch patterns with participants and non-participants; and an assumption that they are identical is necessary but likely inaccurate. The subcommittee agreed that the potential for bias is too great to recommend any voluntary reporting program and suggested that any program (i.e., census or survey) require reporting from participants be mandatory if selected (e.g., Southeast Region Headboat Survey (SRHS)).

The subcommittee agreed that the potential for bias is too great to recommend any voluntary reporting program and mandatory participation is necessary for vessel/owneroperators selected. This is recommended to best achieve the overarching objectives of the proposed program.

# 4.2 Survey or census

Both census and statistical surveys can (and are) used to estimate catch and effort in marine fisheries. Surveys are beneficial in that a representative sample of anglers (as opposed to the entire "population" of anglers in the fishery) and their catch is used to estimate the total catch. However, management often requires these estimates over relatively small areas, short-time scales, or for rare event species. In these situations, survey estimates sometimes lack the precision necessary or desired for management decisions. The common remedy is to increase sample effort (i.e., sample size) to achieve desired precision levels, however, the necessary sample size may exceed program resources. An additional challenge of surveys is that the strata (e.g., area, time-period) require complete coverage before making an estimate. In practice, this means that surveys generally have a longer lag between the time fishing occurs and when the resulting data are available for use.

A census provides a sum of the total effort and catch by tabulating these metrics from all participants in the fishery. In theory, reporting and subsequent use of these data in management can be rapid as no additional estimation procedures are necessary and the report submission

frequency can be established (e.g., weekly) to balance management needs with reporting burden on fishery participants. In practice, estimating catch and effort from a census can be challenging if some participants do not report their catch and effort data within the specified reporting periods. In this event, the census is incomplete and requires an expansion factor to calculate the total catch and effort. As with any survey design, this estimation routine requires additional time, resources, and reduces precision of the estimate. In extreme cases, expanding an incomplete census to a total estimate can be difficult or impossible if the proportion of non-compliant participants is large or if the non-compliant participants are markedly different than those that are reporting as required. Nonetheless, this capability is essential in a real-world census and is important to consider when developing reporting requirements (frequencies and accountability measures) and minimum acceptable lag-time for use in fisheries management.

The technical subcommittee recommends the development and implementation of a electronic logbook *census* program to estimate catch and effort for southeast region charter vessels, including procedures for expanding for non-reporting. This recommendation was based in part on the inability of the current survey to meet the needs of science and management applications and the requirement of timeliness beyond which is readily achievable through a survey approach.

# **4.3** Reporting frequency

The subcommittee discussed how often reports need to be submitted to provide timely data for science and management. Frequent reporting has at least two benefits. Reporting as frequently as practicable reduces recall error/bias when producing catch reports. Frequent reporting also can make these data available for use sooner. Currently, the Gulf of Mexico Fishery Management Council (GMFMC) and South Atlantic Fishery Management Council (SAFMC) require electronic reporting on a weekly basis for commercial seafood dealers and federally permitted headboat operators. Similarly, the subcommittee recommends mandatory weekly reporting, or at shorter intervals if necessary (e.g., The Gulf Council may want to require daily logbook submission during the recreational red snapper season) for a new charter vessel program. A second recommendation was that reports be due from the prior fishing week as soon as practicable. Commercial seafood dealer reports must be submitted by the Tuesday following the previous fishing week (Monday through Sunday). This was considered preferable over the headboat reporting requirements where trip reports are due one week after the end of the fishing week. The reduced lag addresses both advantages identified above.

The technical subcommittee recommends trip level reporting with weekly submission due the Tuesday following each fishing week. This would include no activity reports that could be submitted in advance if periods of inactivity are known. The technical subcommittee discussed that a daily reporting requirement may not be feasible or enforceable, however, reporting systems and user interfaces should be designed to encourage "real-time" at-sea reporting of catch and catch related data elements (e.g. fishing location, fishing method, target species).

#### 4.4 Data collection

A variety of software applications are available for data collection and submission including web, smart phone, and tablet based technology. Web-based software provide the capability to report fisheries data after completing the trip. Smart phone or tablet technology could be used for at-sea or real time reporting of catch and effort. This approach may limit the complexity of reporting options but could provide enhanced validation methods because catch and effort data could be submitted before returning to port allowing enhanced dockside validation. Smart phone and tablet technology can also allow for data input without a current network connection and are also capable of recording vessel positions during a trip via GPS (a far cheaper technology than VMS, but not in real-time).

The subcommittee recommends a multi-faceted approach where a number of reporting platforms can be used so long as the minimum data standards and security protocols are met. Data standards would need to be developed and the subcommittee agreed that National Oceanic and Atmospheric Administracion (NOAA) Fisheries, the Fulf of Mexico Fisheries Information Network (GulfFIN), and Atlantic Coastal Cooperative Statistics Program (ACCSP) could work collaboratively to develop appropriate standards.

These recommendations encompass two overarching objectives of the monitoring program: 1) Flexibility for specific regions, species, or time periods; 2) A flexible framework to allow incorportion of improved technologies as they become available. Electronic monitoring and reporting capabilities are rapidly evolving and the options available in the near-future may far exceed the current suite of tools. It is necessary to allow (and encourage) this development such that in can be leveraged effectively to meet the needs of fisheries management.

# 4.5 Data storage and management

The subcommittee discussed data storage and management that would be necessarily expanded from the status quo in a census based monitoring program. The ACCSP and GulfFIN expressed willingness to handle these raw data and indicated this could be accomplished with extant resources.

#### The subcommittee recommends this process:

- 1. Logbook data collected via authorized platform, ex. web, tablet, phone, or VMS application
- 2. Data submitted to ACCSP or GulfFIN:
- 3. Data integrated by ACCSP or GulfFIN into single composite data set;
- 4. Composite data set distributed to appropriate agencies for analyses and use.

This process could eliminate duplicate reporting for some participants so long as appropriate data standards are in place and the respective agencies agree to confidentiality standards, which would allow sharing and accepting one another's data for use. Elimination of duplicate reporting (e.g., separate state and federal reports) would be a substantial benefit to participants in this survey program and could mitigate any additional reporting requirements for comparison to the current Marine Recreational Information Program (MRIP) survey program.

#### 4.6 Validation and estimation

A successful electronic for-hire program will require adequate validation of catch and effort data and will require collaboration among state, federal, and fishery information network (FIN) programs. A census is likely to be incomplete and estimation procedures for adjusting catch estimates will need to be developed in cooperation with MRIP. The time lag necessary to expand an incomplete census to an estimate (of harvest or effort) should be built into the timeliness need for science and management applications. The Gulf MRIP pilot program tested new validation procedures and provided guidance on improvements necessary before full implementation. The pilot program was successful in that electronic reporting was used (almost exclusively) and supported many of the goals (e.g., more timely, simplified reporting process) yet, many participants failed to submit reports within the required time frame complicating the use of these data for management. The rates of compliance increased over the length of the pilot study period and similar result would be expected with full implementation highlighting the need for validation and an estimation procedure to calculate total catch and effort.

The technical subcommittee recommends building upon the validation methodology developed in the Gulf MRIP pilot study. An overview of the proposed methodology is below.

#### **Dockside Validation of Logbook Trip Reports (Catch and Effort)**

Validation procedures are critical to assessing the accuracy and completeness of submitted logbook reports. Critical components of validation include the creation and review of a site and vessel registry, and methods to validate catch and effort of self-reported data. There is currently a MRIP funded project; *Pilot Project; Validation Methods for Headboat Logbooks*, which is testing dockside sampling methods that could be used to validate headboat logbooks. Results from this project will be available in the spring of 2015.

#### Site and Vessel Registry

A registry of all vessels required to report via logbooks should include detailed docking location information for each vessel. The port city and mailing address for owners of all federally permitted vessels (both active and non-active) is available from the permit frame maintained by National Marine Fishery Service (NMFS) Southeast Regional Office (SERO), and may be used as a starting point for indentifying where vessels are located. A regularly updated list of all active charter vessels (both federal and state permitted) with docking site information is also maintained in states where the MRIP for-hire-survey (FHS) is administered. From the vessel registry, a list of all known docking locations should be generated and each site should be given a unique identification code. Information contained in the site list should also include site location

descriptions, site telephone numbers, contact person at the site, GPS location coordinates, and the total number of vessels located at the site. The site registry should be used to randomly select sites for dockside validation assignments (described below).

#### Validation of Catch

Dockside assignments for validating harvest should be randomly selected from the site registry and stratified by region (e.g. state or sub-region within large states) using probability proportional to size (PPS) sampling with replacement, with the size measure being the number of vessels at each site. This method is used in statistical sampling designs where sample clusters (e.g. sites where charter vessels dock) differ widely with respect the number of sample units (charter vessels) contained within. PPS sampling selects sites with a higher number of vessels more frequently and prevents potential sample bias by insuring that vessels at low pressure sites do not have a higher probability for selection. Sample days should be distributed across weeks and across weekend/weekday strata, and more weight should be given towards high fishing activity periods (summer and weekends). It is recommended that the site selection program be run monthly by a regional coordinating entity, such as Gulf of Mexico Fishery Management Council (GMFMC), who provides draw files to local coordinators (states or other entities). Local coordinators should report tallies for the number of completed assignments and successful interviews to the regional entity weekly.

During an assignment, field samplers should arrive at the assigned site at least one hour before half-day charter fishing trips are expected to return. For sites where overnight fishing trips take place, field staff should call or visit the site the day before the assignment to determine if overnight trips are returning and arrive on site early if necessary to intercept those vessels. Upon arrival, samplers should survey the site and attempt to locate each vessel listed on the vessel register for that site. Each vessel at the site should be recorded on an Assignment Summary Form and coded as one of the following:

- 1 = vessel in
- 2 = vessel out, charter fishing (this must be verified)
- 3 = unable to validate (vessel sold, moved to unknown location, etc.)
- 4 = vessel out, NOT charter fishing (this must be verified)
- 5 = vessel out, fishing status unknown (use when unable to verify the fishing status)

For vessels coded as 2 (out charter fishing), the field sampler should attempt to verify the expected return time and record this time on the Assignment Summary Form. As each vessel returns from fishing, the sampler should record on a separate Dockside Intercept Survey Form the vessel name, vessel ID number, and the return date and time. Samplers should first approach the vessel operator for permission to weigh and measure all harvested fish, and the sampler should then observe the harvested catch and record the total number of fish for each species, as well as length at the mid-line (mm) and weight (kg) of whole fish that can be measured. After the catch is inspected, the field sampler should then conduct an interview in person with a crew member (captain and/or mate). It is important to conduct interviews directly with vessel operators, rather than with charter vessel clients, since the purpose of the dockside validation is to measure recall

error and bias in trip data recorded by vessel operators on logbook trip reports. During the inperson interview, the following information should be recorded:

- Departure date
- Departure and return time
- Number of passengers (fishing and non-fishing, not including crew)
- Number of anglers (total number of passengers that fished at any time during the trip)
- Number of crew, including captain
- Target species
- Primary area fished (crew should be asked to identify the statistical area where the majority of fishing took place during the trip using statistical maps provided)
- The minimum and maximum depths (in feet) fished for the trip
- The percent of fishing time spent fishing in federal waters, state waters, and inland waters
- Primary fishing methods (bottom fishing, drifting, trolling, spear fishing)
- Hours fished (number of hours spent with gear in the water)
- For each species released or could otherwise not be observed by the field sampler, the total number released for each disposition:
  - 1 Thrown back alive
  - 3 Eaten/plan to eat
  - 4 Used for bait/plan to use for bait
  - 5 Sold/plan to sell
  - 6 Thrown back dead/plan to throw away
  - 7 Other purpose

Samplers should remain on site until the last vessel known to be out fishing has returned (with the exception of overnight trips).

#### Validation of Vessel Activity and Inactivity (Effort)

Validation of vessel activity (or inactivity) is critical to determining compliance with logbook reporting requirements. Information on whether or not a vessel is in or out of port on a particular day can be matched with logbook records or hail-out/hail-in requirements to determine if vessel activity was accurately reported. To validate vessel activity and inactivity before reporting in the logbook reporting system, sites should be clustered into groups of sufficient size that all sites within the selected region may be visited within a 6 to 8 hour time period, including driving time.

Site clusters should be selected each week within a month using simple random sampling, without replacement. For small states where all sites may be visited in a single day, sites may all be included in a single cluster that is validated each week.

During a scheduled vessel activity validation assignment, the field sampler should visit all sites within a selected vessel activity validation region and attempt to verify the fishing status for all vessels at each site within that region. The sampler should record the fishing status and time for each vessel on a Vessel Status Validation Form using the following codes:

- 1 Vessel in
- 2 Vessel out, charter fishing (must be verified)
- 3 Unable to validate
- 4 Vessel out, not charter fishing (must be verified)
- 5 Vessel out, status unknown

If possible, the sampler should verify the fishing status with someone at the dock or in the booking booth. If unable to verify the fishing status of a vessel, the sampler should use code 5.

Dockside validation will also serve the secondary, and essential, function of collecting biological samples from the for-hire fishery. These samples are necessary to characterize the catch for use in stock assessments and to monitor the health of the stocks. If practicable, the subcommittee recommends using observers on six-pack charter vessels. Additionally, VMS in conjunction with hail-out, hail-in to improve validation could be considered to improve validation and data quality, although at the expense of additional cost and reporting burden.

The subcommittee recommends use of an MRIP certified methodology for validation with the following elements: Gulf MRIP pilot study methodologies, including dockside validation of catch and vessel activity, and maintenance of site and vessel registries.

The following additional elements should also be considered:

- At-sea observer coverage; and,
- Fine-scale discard data, depths of capture, area fished, release mortality.

If VMS and hail-in/hail-out requirements are implemented, methods for validation could be modified as VMS technicians could validate when trips occur through vessel position coordinates.

# 4.7 Accountability measures

Procedures to ensure timely and accurate reporting of data are essential to the success of any program. Late or missing reports can reduce accuracy (recall bias), increase uncertainty (e.g., requires procedure to estimate catch from missing reports), and can prevent timely use of these data for science and management. The Councils recently began requiring electronic submission of reports from commercial seafood dealers. Dealer reports and the associated problems with late or missing reports were discussed at length by the Councils. The Councils now require timely submission (weekly, with reports submitted by the Tuesday following the previous fishing week) and that seafood dealers are *only* authorized to purchase seafood if they are up to date on previous reports. A similar procedure should be developed for charter vessels requiring submission of previous reports to maintain a valid charter vessel permit and take passengers on for-hire trips. The subcommittee recognizes that accountability will be challenging and costly to implement due to the mobility, turnover and sheer number of charter vessels.

The principle objective is to encourage compliance without issuing fines and/or penalties. However, the full range of potential accountability measures should be enumerated in consultation with NOAA General Counsel through development of management regulations and penalty schedules. Similar (or identical) reporting requirements should be established between the South Atlantic and Gulf of Mexico management regions that will ease reporting burden and aid in compliance. Extensive outreach, training (as necessary), positive messaging, and industry participation in the design of the data collection system should aid in reporting compliance and meeting the goals of the program.

The subcommittee recommends accountability measures and reporting requirements similar to those implemented for commercial seafood dealers in the southeast region (i.e., weekly submission of trip level reports, including periods of no activity due Tuesday following each week). A charter vessel owner/operator would only be authorized to harvest or possess federally managed species if previous reports have been submitted by the charter vessel owner/operator and received by National Marine Fisheries Service (NMFS) in a timely manner. Any delinquent reports would need to be submitted and received by NMFS before a charter vessel owner/operator could harvest or possess federally managed species from the EEZ or adjacent state waters.

# 4.8 Calibration with existing survey

Transitioning into the proposed program will require an upstart period of at least one year to conduct outreach and ensure a high level of compliance. The subcommittee recommends dual survey methods (existing and new) for no less than three years. This overlap in survey periods will provide a basis to calibrate the new census results to the historical catch and effort data from the existing charter vessel survey. Historical catch data are critical inputs for science (e.g., stock assessments) and management (e.g., season length) and implementation of a new system without calibration would compromise the value of the historical catch information. Additionally, implementation of the new program is likely to have start-up difficulties that require modification, as such, the existing survey would not be expected to provide the best scientific information available (at least for the first year) until the new program is deemed operational.

Data from the new program would not be expected to provide management advice during the first year of operation. Moreover, this would allow the possibility of an initial phase-in or limited implementation to identify and solve significant problems prior to implementation for all participants.

# 4.9 Should state permitted for-hire vessels be required to participate?

The subcommittee discussed the objectives of the proposed program (i.e., improved estimates of catch both in terms of timeliness and accuracy), as well as the importance of mandating participation from state permitted for-hire vessels. The possibility of state vessels landing federally managed species in state waters does exist but the magnitude of those landings is unknown at this time, but expected to be relatively small for most federally managed species. The difficulties in establishing rules to mandate state vessel participation may be too great and should not be a barrier to developing a reporting program for federally permitted vessels. However, incorporation of state vessels into the program should be a long-term objective that would aid in timeliness and accuracy of data from the entire for-hire fleet and could simplify validation protocols that would not require distinguishing between state and federally permitted vessels.

The subcommittee recommends that the Councils move forward with development of a reporting system that includes federally permitted for-hire vessels while also exploring ways to determine the impact of state permitted vessels on landings estimates of federally managed species. Long term, the subcommittee recommends that both state and federally permitted charter vessels participate in this census to include the entire fleet of charter vessels harvesting federally managed species.

# 4.10 Program coordination

The subcommittee discussed that the success of the program requires a smooth and well-coordinated program throughout the region. This is to meet timeliness needs, improve accuracy (and precision), and minimize duplication of effort.

To this end, the subcommittee recommends that GulfFIN and ACCSP committees work jointly with end users (i.e., MRIP, Southeast Regional Office (SERO), Southeast Fisheries Science Center (SEFSC), highly migratory species (HMS), and state agencies) to coordinate this new reporting program. Both quality control and quality assurance units in the program to ensure data meets required standards. A timeline for program implementation must be developed with the Councils, states, and other agencies.

# 4.11 Budgetary implications

The vision of the subcommittee is that the proposed census program may be funded through MRIP and incorporate MRIP certified validation and estimation procedures but operation would be decentralized from MRIP to regional and state entities through their FINs. It is expected that the census approach recommended by this subcommittee would result in additional costs for monitoring compliance and validating trip activity. Additional infrastructure and personnel may be necessary to maintain and process these data.

#### **Electronic Logbook Costs**

Cost estimates are an important component to the development of any new reporting program, and provide resource managers and scientists with a sense of how much funding is needed to support both implementation and maintenance of a program. Costs for electronic reporting may include: software development, reporting and/or monitoring hardware, monthly service fees, and personnel for data management, validation, and estimation. Costs are incurred both by the government, as well as fishermen who report these data. The following provides a summary of estimated costs for the electronic reporting program developed by the Technical Subcommittee. Cost estimates from existing programs and pilot studies, such as MRIP, the Southeast Headboat Survey, the commercial coastal logbook program, and the MRIP electronic logbook pilot study, are also provided for comparative purposes. Implementation of a new reporting program would require side-by-side comparative testing for calibration purposes, and those costs are not considered herein. Costs for observer coverage are also not included. Rather, costs are focused on the initial implementation, ongoing administration, data management, and statistical estimation of an electronic reporting program in the Gulf of Mexico and South Atlantic.

#### Current and Pilot Study Program Costs

The MRIP is the primary source of charter for-hire data in the Southeast Region. MRIP collects catch and effort data from both state-licensed and federally-permitted charter vessels from North Carolina through Mississippi. Charter vessel catch and effort data are also collected by the Louisiana Department of Fish and Wildlife and Texas Parks and Wildlife Department through creel surveys, and side-by-side comparison testing is planned for Louisiana in 2015. Annually, MRIP spends approximately \$4.3 million dollars to conduct dockside sampling and validation in the Southeast Region (North Carolina to Louisiana) for both private and charter vessels. Costs for specifically conducting charter sampling were not estimated, as those costs are difficult to estimate due to a combination of factors (survey procedures, contractual pricing, fixed costs and staffing/administrative considerations), but obviously would be less than the overall costs indicated above. An additional \$600 thousand dollars is spent conducting the for-hire telephone survey annually. A total of 3,920 charter vessels are currently included in the MRIP for-hire survey frame.

Headboat catch for 145 vessels is monitored through electronic logbooks (ELB) by the SEFSC. A total of 13 federal, state, and contract personnel are involved in administering the program and monitoring fishing activity from North Carolina to Texas, including biological sampling and validation of reports of landings and effort. Costs for the program include salaries and benefits, vehicles, travel, supplies, and software development and maintenance. Total funding for the

Southeast Region Headboat Survey (SRHS) is approximately \$888 thousand dollars, which equates to \$6,124 per vessel annually.

The SEFSC coastal logbook program for commercial fisheries is a paper-based logbook program, which obtains data from about 3,000 permit holders (vessels). Annually, the SEFSC spends \$775 thousand dollars for data entry, personnel, printing, storage, software maintenance, and overhead for this program. These costs do not include Trip Interview Program sampling, which is used for validation and biological sampling of commercial landings. The costs also do not include compliance enforcement.

Lastly, MRIP conducted an ELB pilot study in 2011. The study included 410 vessels from the Florida Panhandle and Port Aransas, Texas. Costs for the pilot program included \$213.5 thousand dollars for start-up expenses, including a stakeholder workshop, software development, certified letters, outreach meetings, and working group meetings. Project expenses for logbook reporting and validation for one-year totaled \$385.6 thousand dollars. These expenses included salaries and overhead for a full-time coordinator, a database manager, and four field staff. Expenses were also included for travel and training expenses, equipment, printing costs, at-sea observer passenger fares, and GSMFC administrative costs. The average cost per vessel was \$1,340 for Texas vessels and \$658 for Florida vessels. Many more vessels were concentrated in a small geographic area in the Florida Panhandle, resulting in lower costs relative to Texas. Inkind contributions from National Marine Fisheries Service and state employees were not included for many staff who served on the project team for the pilot study and conducted analyses, customer service, and database management. Therefore costs presented in the final report are less than the true costs of the project. On average, the cost per vessel as reported in the pilot study was \$911 after excluding observer passenger fares and paper-based logbook printing.

**Table 1.** Estimated Costs for an Electronic Logbook Program. Estimates are based on 2,555 <u>federally</u> permitted charter vessels. Headboat vessels are excluded from cost estimates, as well

as vessels already possessing a commercial reef fish permit and VMS unit.

Activity	Cost Type	mmercial reef fish permit and V  Estimated Expenses	Comments/Source
Software Development	Start-up	\$100,000	Costs for Web site/app
	(gov't)	, ,	development. These costs could
	(8)		be reduced if existing software
			applications (SE Headboat Survey
			or iSnapper) are used instead of
			any new software developed.
			However, modifications of data
			fields, data storage and data
			export procedures would be
			required to accommodate the
			increased number of vessels.
Hardware/database	Start-up	\$25,000	Purchase of a server to store data.
infrastructure	(gov't)		
Hardware/database	Reoccurring	\$20,000	There would be reoccurring costs
maintenance	(gov't)		for hardware/software and
			database maintenance.
Database manager(s)	Reoccurring	\$150,000	Salaries and administrative costs
and administration	(gov't)		for database management.
Certified Letters	Start-up,	\$15,858	2,643 vessels @ \$6 per letter
	with period		
	reoccurring

0.1.1.1.0	(gov't)	han 000	1.5
Stakeholder Outreach	Start-up	\$30,000	15 meetings @ \$2,000 per
Workshops	(gov't)	#2.202.000	meeting
Field Samplers –	Reoccurring	\$3,392,000	53 port agents @ 50 vessels per
Salaries, Benefits, and	(gov't)		port agent. \$64,000 for salary,
Overhead			benefits, and overhead per port
			agent – source SE Headboat
			Survey. If costs per vessel (\$658-\$1,340) from MRIP pilot study
			are used, then total costs range
			from \$1.74 to \$3.54 million.
Data Analyst(s) –	Reoccurring	\$215,000	1 Gulf and 1 South Atlantic
Salary and Benefits	(gov't)	\$213,000	analyst @ GS-13 salary + benefits
Training, Travel, and	Reoccurring	\$158,700	~\$60 per vessel – source MRIP
Equipment for Field	(gov't)	\$130,700	pilot study; costs are higher for
Samplers	(50, 1)		more remote areas vs. ports with
- Sumpress			large concentrations of vessels.
Enforcement and	Reoccurring	\$800,000	Data timeliness is critical for a
Compliance	(gov't)	, ,	logbook program. Additional
Monitoring –			compliance monitoring and
Enforcement officer			enforcement for misreporting and
salaries, benefits, and			non-compliance with reporting
overhead.			will be required. To properly
			conduct compliance, an increase
			of 5 Enforcement Officers and 1

			Supervisory Enforcement Officer are estimated to be needed.
VMS units (if required)	Start-up (gov't or industry)	\$5,750,000 (low estimate) \$7,750,000 (high estimate) (Reimbursement to fishermen for the purchase of VMS units may be available from NOAA Fisheries' Electronic Monitoring Grant Fund, but this money is currently not in hand and OLE would need to request funds through the budgetary process)	Currently 107 charter for-hire vessels have a commercial reef fish permit and VMS unit and another 145 vessels participate in the SE Headboat Survey.  Approximately 2,500 charter for-hire vessels would need to obtain a VMS, if required. Costs for VMS units range from \$2,300 to \$3,800. Up to \$3,100 is currently authorized for reimbursement.
VMS installation	Start-up (industry)	\$500,000 (low estimate) \$1,500,000 (high estimate)	2,500 vessels x \$600 for marine technician to install VMS unit. Installation costs range from \$200 to \$600 depending upon proximity of vessel to marine electrician.
VMS personnel	Reoccurring (gov't)	\$530,000	Salary and benefits for five VMS technical staff (monitor 500+ vessels each) and one OLE Helpdesk person.
VMS annual service charges	Reoccurring (industry)	\$1,800,000	\$60 per month per vessel; \$720 annually per vessel x 2,500 vessels
VMS unit software	Reoccurring (gov't)	\$50,000	If VMS units will report any unique information, units will need to have initial and periodically updated software installed at a cost up to \$50,000.
Total Costs (w/o VMS)		\$170,858 (Start-up) \$4,735,700 (Reoccurring) \$4,906,558 (Start-up + reoccurring)	
Total Costs (w/ VMS)		\$6,420,858 (Start-up – low est.) \$9,420,858 (Start-up – high est.) \$7,115,700 (Re-occurring) \$13,536,558 (Total – low est.) \$16,536,558 (Total – high est.)	If VMS is required, some expenses for port sampling validation of fishing effort and enforcement compliance may be reduced.

# SECTION 5. CHALLENGES

# 5.1 Calibration with existing survey

The subcommittee recommends the use of dual survey methods (existing and new) for no less than three years. This overlap in survey periods will provide a basis to calibrate the new census results to the historical catch and effort data from the existing charter vessel survey. Historical catch data are critical inputs for science (e.g., stock assessments) and management (e.g., season length) and implementation of a new system without calibration would compromise the value of the historical catch information. Additionally, implementation of the new program is likely to have start-up difficulties that require modification, as such, the *proposed census would not be expected to provide the best scientific information available (at least for the first year)* until the new program was deemed operational.

# 5.2 Reporting burden

Although frequent reporting with as short as practicable lags between end of fishing period and report submission is desirable, the burden of reporting on vessel operators is an important concern. Wherever feasible, the reporting burden should be minimized. Implementation of this new program would require additional reporting burden over the status quo. To mitigate this requirement, the subcommittee recommends reducing duplicate reporting (submission of reports to multiple agencies, possibly in different formats) to ease reporting requirements. For example, charter vessels selected for the current For-Hire telephone survey should be able to submit their data electronically satisfying the submission requirements for both programs.

# **5.3** Compliance

Ensuring compliance is likely the biggest barrier to achieving the objectives for this program; more timely data with improved accuracy and stakeholder confidence. The Marine Recreational Information Program (MRIP) Gulf logbook pilot project was negatively affected by late or missing reports from participants. In a census program, this is detrimental to both timeliness and accuracy as complete catch estimates cannot be generated with missing reports. Late reporting also affects accuracy because of recall bias (i.e., difficult to remember what was caught several weeks earlier). In addition, an incomplete census will require an estimation procedure to account for un-reported landings that requires time and adds uncertainty to the final catch and effort estimates.

Adequate accountability measures are essential to achieving high compliance rates (i.e., 100% timely reporting). The subcommittee recommended an approach similar to the accountability measures recently developed for commercial seafood dealers and headboats. Briefly, commercial seafood dealers are only authorized (i.e., possess valid permit) to purchase seafood if their weekly purchase reports have been submitted. As is the case with headboat reporting, charter boats would not be allow to harvest or possess federally managed species from the Exclusive Economic Zone (EEZ) or adjacent state waters until previous trip (including no

activity) reports have been submitted. The effectiveness of this accountability measure is dependent of the capability of law enforcement to enforce reporting requirements. The subcommittee recommends consultation with the Office of Law Enforcement and National Oceanic and Atmospheric Administration (NOAA) General Counsel to explore the selection of appropriate and enforceable accountability measures.

#### **5.4** Collaboration with states

Individual States would be tasked with data collection and validation within their collective states. State requirements vary regarding reporting of fishery data with some states (e.g., South Carolina) requiring the submission of paper-based reporting. Other states (e.g., North Carolina) are progressing rapidly toward electronic logbooks with the other states within this range. Long term, the subcommittee recommends that both state and federally permitted charter vessels participate in this census to include the entire fleet of charter vessels harvesting federally managed species. In the near-term, implementation of electronic logbook reporting for the federally permitted for-hire fleet would substantially improve the data collection program but not depend on delays and uncertainties associated with requiring similar regulations for state-permitted vessels at this time. Consideration of only federally permitted vessels would ease the implementation of this process with the caveat that a large proportion of charter vessels would not be included in the census and their catch (and effort) would have to be estimated via other means that would reduce effectiveness of the census program. However, for state-permitted vessels, requiring electronic reporting without duplicate paper reporting may require legislative changes in some states (e.g., South Carolina) and there is uncertainty if or when this could be accomplished.

# APPENDIX C. TECHNICAL DATA COMMITTEE SEPTEMBER 2016 MEETING MINIMUM DATA ELEMENTS

#### **Background**

The Gulf of Mexico Fishery Management Council (Council) is considering a generic amendment that would implement electronic reporting for federally permitted Gulf of Mexico for-hire vessels. The Council requested additional review and input from their Data Collection Technical Committee (Committee), specifically focusing on the recommended data elements that are necessary to improve fisheries and socioeconomic data in the Gulf of Mexico (Gulf) for-hire fishery. The Committee reviewed a list of data elements collected by 23 for-hire programs in the Gulf and Atlantic regions and a list of potential data elements for consideration in the Gulf for-hire fishery. The meeting focused on the review and subsequent recommendations of this committee about the data elements to be included as part of the for-hire electronic logbook program. The discussions were guided by the Council objective to keep the reporting as simple as possible, but adequate to achieve a timely and accurate estimate of catch and effort from the for-hire fleet. The Committee reviewed a list of data elements that could be incorporated in a for-hire data collection program. The Committee categorized each element into one of the following categories: Essential, Recommended, or Not Recommended.

#### **Essential Elements**

The Committee characterized 21 variables as "Essential" meaning they are necessary to achieve the minimum objectives of the program. These minimum elements are presented in **Table 1**. The Committee emphasized that the reporting requirements should be as simple as possible to complete, noting vessel operators will need to submit the fishing report before completing each trip. Many of the elements necessary to identify an individual trip (e.g., permit number, vessel number, trip type, trip identifier, and hail-out time) could be auto-completed by the reporting software at the beginning of each trip (i.e., submitted via hail-out) and would require little effort by the vessel operator. This greatly improves data quality, validation, and vessel specific effort information. Several additional variables could be configured when the software is initially installed and rarely modified. For example 'trip type' could be defaulted to 'for-hire' and only changed occasionally when other trips types are made. These variables would be specified at the beginning of each trip and would not require action from the vessel operator for the remainder of the for-hire trip. Primary target species could also be autopopulated with a default to simplify reporting. This variable is essential for stock assessments and economic analysis. While target species may change during trip due to conditions on the water, bias may exist if defined after a trip (i.e., you targeted what you caught).

#### Variables reported at hail-out

Expected landing time, location, and the number of anglers were recommended as variables to be provided during the hail-out prior to initiating the trip. Expected landing time and location would support increased efficiency of dockside validation and increase the sample size of biological data that is used for stock assessments and management.

#### At-sea reporting

The Committee recommended five variables be included in the at-sea report: species harvested, number harvested, number released, disposition of released fish, and primary depth fished (Table 1). These variables comprise the most important elements necessary to estimate harvest of the for-hire fleet. Disposition of released fish was only recommended for highly migratory species (HMS); this query could be automated to only appear when an HMS species was reported discarded. The reporting protocol would build upon existing software that would support fast, intuitive data entry that would be validated through dockside intercepts. The submission of these data would be provided during the hail-in for each trip and would complete the data submission requirements for each for-hire trip.

#### **Recommended Data Elements**

The Committee provided recommendations on a set of variables that were deemed important, yet, beyond the bare minimum need to achieve an estimate of catch and effort from the for-hire fleet. These recommended elements are available in Table 2 and generally considered supplementary (e.g., minimum and maximum depth fished) or provide additional socioeconomic information about the for-hire fishery. For example, fuel price, gallons used, and number of paying customers could be provided to better characterize economic and social impacts of for-hire fishing. However, some of these data may be collected more efficiently by a sample of the fleet (e.g., fuel price) and there was concern that too many fields may reduce reporting compliance and stakeholder support.

#### **Data Elements Not Recommended**

The Committee recommended that several data elements be removed from consideration as part of the for-hire reporting program. These elements are listed in Table 3. The rationale for removal was varied. Some elements were considered too burdensome to collect relative to the value added to the data (e.g., hook size, number of lines fished), potentially ambiguous (e.g., number of crew members fishing) or difficult to validate (e.g., charter fees). The Committee discussed that these variable could provide important information but again, was guided by the objective to focus on the minimum elements to characterize catch and effort of the fleet.

Table D1. List of essential data elements as recommended by the Technical Data Committee at their September 2016 meeting.

Variable	Description	Comments	Committee Recommended?	Submission Type
Permit Number	Federal for-hire permit number for the vessel	Owner could configure initial account with all Permit Numbers; NMFS can links and validate to Vessel ID, which is easier for captain to report and easier for agent to validate	Essential	Auto-complete
Vessel Number	USCG vessel id	Provided by captain, could be prefilled or selected from drop down menu to save time.	Essential	Auto-complete
Trip Type	Commercial/Headboat /Charter/Private/Other (incl. research trips)	Helps law enforcement identify trip and associated regulations that apply	Essential	Auto-complete with custom defaults
Trip Identifier	Unique identifier for current trip assigned at Hail-out; cannot obtain new trip identifier until current trip's final logbook is received.	Critical to maintain data integrity and to ensure trip reports are completed in timely manner.	Essential	Auto-complete

Table D1 cont. List of essential data elements as recommended by the Technical Data Committee at their September 2016 meeting.

Landing Location	Location for vessel landing, transmitted to law enforcement	Critical for dockside validation; will need call service for weekends	Essential	Auto-complete with custom defaults
Landing Date	Date for vessel landing, transmitted to law enforcement	Critical for dockside validation; will need call service for weekends	Essential	Auto-complete with custom defaults
Landing Time	Time for vessel landing, transmitted to law enforcement	Estimate provided at hail-out, Actual potentially collected 30 min in advance of landing (1 hr: HBS Collaborative, 3 hr: Commercial - 1 hr window)	Essential	Provide at hail-out
Primary Method of Fishing	Primary Method {troll, drift, bottom, spear} used on the trip	Critical for accurate CPUE computations; gear impacts selectivity, discard rates	Essential	Auto-complete with custom defaults

**Table D1 cont.** List of essential data elements as recommended by the technical data committee at their September 2016 meeting.

Variable	Description	Comments	Committee	Submission Type
Anglers	Number of anglers fishing on the vessel (distinct from number of passengers and crew)	Critical metric for CPUE computations ([anglers+fishing crew] X fishing hours = anglerhours)	Essential	Provide at hail-out
Number of Crew	Number of crew on the boat	Useful for economic analysis, bag limit analysis, etc.	Essential, included in current SRHS	Auto-complete with custom defaults
Hours Fished	Hours spent fishing (avg. per angler)	Effort metric for CPUE computations used for stock assessment indices of abundance	Essential	Auto-complete with custom defaults
Primary Target Species	Primary species targeted on trip	Critical metric for CPUE computations, as not all trips targeting a species land the species, but the effort is still effort directed towards the species.	Essential for stock assessments and economic analysis; target species may change during trip due to conditions on the water; however, bias may exist if defined after a trip (i.e., you targeted what you caught). Might need a few aggregate fields like "Reef Fish," "Migratory Pelagics," "HMS Pelagic Species," "Coastal Sharks," "No Intended Target." Might be useful to have software auto-populate "default" target species or carry forward selected target species from previous trip.	Auto-complete with custom defaults

**Table D1 cont.** List of essential data elements as recommended by the technical data committee at their September 2016 meeting.

Species	Species caught on trip	Critical for ACL monitoring	Essential	At-sea report
Retained Catch	Number of each species caught on trip	Critical for ACL monitoring	Essential	At-sea report
Released Catch	Number of each species released on trip	Critical for stock assessment	Essential	At-sea report
Disposition	Status of discarded species	Useful for stock assessment	Essential for HMS targeted species (if HMS targeted species reported as discarded, this question pops up)	At-sea report

**Table D1 cont.** List of essential data elements as recommended by the technical data committee at their September 2016 meeting.

Area	Area fished at set intervals from realtime or archived GPS track	Important for evaluation of barotrauma, assignment of fishing to jurisdiction, evaluation of spatial management, understanding impacts of climate change on stock distribution, safety at sea	Essential (Autopopulated)	Auto-complete
Primary Depth Fished	Self-reported Primary depth fished in feet (what depth was your gear? – this is the critical question for barotrauma, not the depth of the bottom)	Critical to evaluation of barotrauma and associated release mortality	Essential; Min, Max, and Primary Depth collected by SRHS starting in 2013.	At-sea report
Hail-out Time	Time vessel leaves dock		Required by Council	Auto-complete
Hail-in Time	Time vessel returns to dock		Required by Council	Auto-complete

**Table D1 cont.** List of essential data elements as recommended by the technical data committee at their September 2016 meeting.

Trip Duration (hours)	Easily computed from Hail-ou on of Trip and Hail-in, but less useful tha Hours Fished for CPUE computations	I nooded ledd Heel in	Auto-complete; Based on hail- out/hail-in times
-----------------------	--	-----------------------	---

72

Table 2. Data elements recommended by the Technical Data Committee at their September 2016 meeting.

Variable	Description	Comments	Committee Recommended?	Submission Type
Secondary Target Species	Secondary species targeted on trip	Some vessels may target multiple species, especially vessels making multi-day trips.	Recommended	Auto-complete with custom defaults
Min Depth Fished	Self-reported Min depth fished in feet	Critical to evaluation of barotrauma and associated release mortality	Recommended	At-sea report
Max Depth Fished	Self-reported Max depth fished in feet	Critical to evaluation of barotrauma and associated release mortality	Recommended	At-sea report
Vessel Length	Length of vessel in feet	Owner could configure account with information for all vessels, NMFS can link and validate.	Recommended (auto-populated)	Auto-complete
Fuel Quantity	Estimated gallons of fuel used on trip	Useful to assess economics of the for-hire sector	Recommended, included in current SRHS. May be possible to compute from VMS track rather than require operator to report.	Recommended, included in current SRHS. May be possible to compute from VMS track rather than require operator to report.
Fuel Price	Price per gallon paid for fuel used on trip	Useful to assess economics of the for-hire sector	Recommended, included in current SRHS. Secondary data sources exist for this information.	Recommended, included in current SRHS. Secondary data sources exist for this information.

**Table 2 cont.** Data elements recommended by the Technical Data Committee at their September 2016 meeting.

Variable	Description	Comments	Committee Recommended?	Submission Type
Passengers	Number of passengers (not including crew)	Used to compute total trip fee (website posted headboat cost/person X passengers), essential for bag limit analysis	Recommended; note some passengers may not have paid, which introduces some bias in the economic analysis	Recommended; note some passengers may not have paid, which introduces some bias in the economic analysis
Secondary Method of Fishing [optional]	Secondary Method {troll, drift, bottom, spear} used on the trip; field not required, optional if applicable to the trip	Critical for accurate CPUE computations; gear impacts selectivity, discard rates	Suggested as "Optional" field	Select from list

**Table 3.** Data elements not recommended by the Technical Data Committee at their September 2016 meeting.

Variable	Description	Comments	Committee Recommended?
Number of Hooks	Mean number of hooks in the water	Useful for CPUE, difficult for large boats with many anglers	Not recommended
Pay Type	Per person, per group, or no charge (mixed pay types defaults to per person)	Useful to assess economics of the for-hire sector; and delineation of for-hire sub-sectors	Not recommended
Hook Manufacturer	Manufacturer of hooks used to catch each species (if hook gear reported)	Useful for CPUE computations; hook size impacts selectivity - hook sizes vary by manufacturer	Not recommended
Hook Number	Number of hooks used	Useful to convert angler-hours to hook-hours for CPUE computations	Not recommended
Hook Size	Size of hook used	Useful for CPUE computations; hook size impacts selectivity - hook sizes vary by manufacturer	Not recommended
# of Crew Fishing	Number of crew that were fishing on the boat	Critical metric for CPUE computations ([anglers+fishing crew] X fishing hours = angler-hours)	Not Recommended - Difficult to define – what if a crew member deploys the line and the angler lands the fish?

**Table 3 cont.** Data elements not recommended by the Technical Data Committee at their September 2016 meeting.

Variable	Description	Comments	Committee Recommended?
Number of Lines	Mean number of lines being fished	Useful for CPUE, difficult for large boats with many anglers	Not recommended for Headboat; Potentially useful for Charter – if vessel is trolling this is probably a more accurate measure of effort than number of anglers
Charter Fee	Total for-hire fees collected from all passengers for this trip	Critical for ANY economic analysis/assessment	Not recommended in eLogbook, but highly recommended for Separate survey. Can also be obtained online. Vessel operator may not have this information available prior to hitting dock.
Crew Pay	Total compensation received by hired crew for this trip	Useful to assess economics of the for-hire sector	Not recommended in eLogbook, but highly recommended for Separate survey. Requesting tip information may reduce compliance. Vessel operator may not have this information available prior to hitting dock.
