

Sustainable Fisheries Committee: Action Guide and Next Steps for Tab E

Agenda Item IV: Review of Florida Pompano Landings and Requirements for Consideration in Federal Fisheries Management

Timeline Status: Presentation and discussion

Council input and next steps: Council and SERO staff will present the historical landings of Florida Pompano in Gulf waters by state, with comments on the types of gear used to harvest the species. Landings will be presented as those from either state or federal waters. These data are presented to help the Council to determine whether Florida Pompano might require federal fisheries management. SERO staff will assist the Council in reviewing the factors to consider when evaluating whether stocks require federal management, as specified in the National Standard Guidelines. The Committee should work through the requirements specific to Florida Pompano, and make recommendations to the Council as appropriate.

Agenda Item V: Review of the Socio-Economic Aspects in Stock Assessments Workshop Report

Timeline Status: Presentation and discussion

Council input and next steps: Dr. Sean Powers (SSC representative) will summarize the September 2022 SSC discussions relative to Dr. Andrea Chan's (NOAA) presentation on the socioeconomic aspects in stock assessments workshop (SEASAW) report: recommendations for increasing assessment accuracy and improving management advice. Dr. Chan's presentation on the SEASAW initiative included results of a survey of current practices and recommendations made during a national multi-disciplinary workshop. The Committee should discuss the information presented and ask questions. Committee actions are not required following the discussion.

Agenda Item VI: Other Business

Timeline Status: Potential Additional items

Council Input and Next Steps: Additional items may be brought up for discussion by the Committee, time permitting. If the Committee wishes to pursue action, then action can be scheduled at a future Council meeting.
