

How do we address interactions between fishing and dolphins?

Gulf of Mexico Fishery Management Council Meeting

Overview

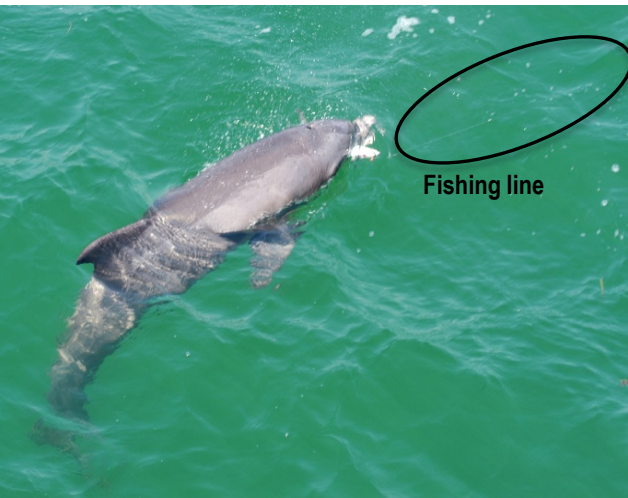

- Background
- Why is this a problem?
- What can we do about it?
- Deterrence Guidelines

Nature of Interactions

Depredation

- Take bait or catch directly from gear

Scavenging

- Take discarded fish

Illegal Feeding

- Includes attempting to feed, teasing & directly tossing catch in dolphin's direction

Impacts to Anglers

Impacts to Dolphins

Ingestion & Entanglements

Boat Strikes

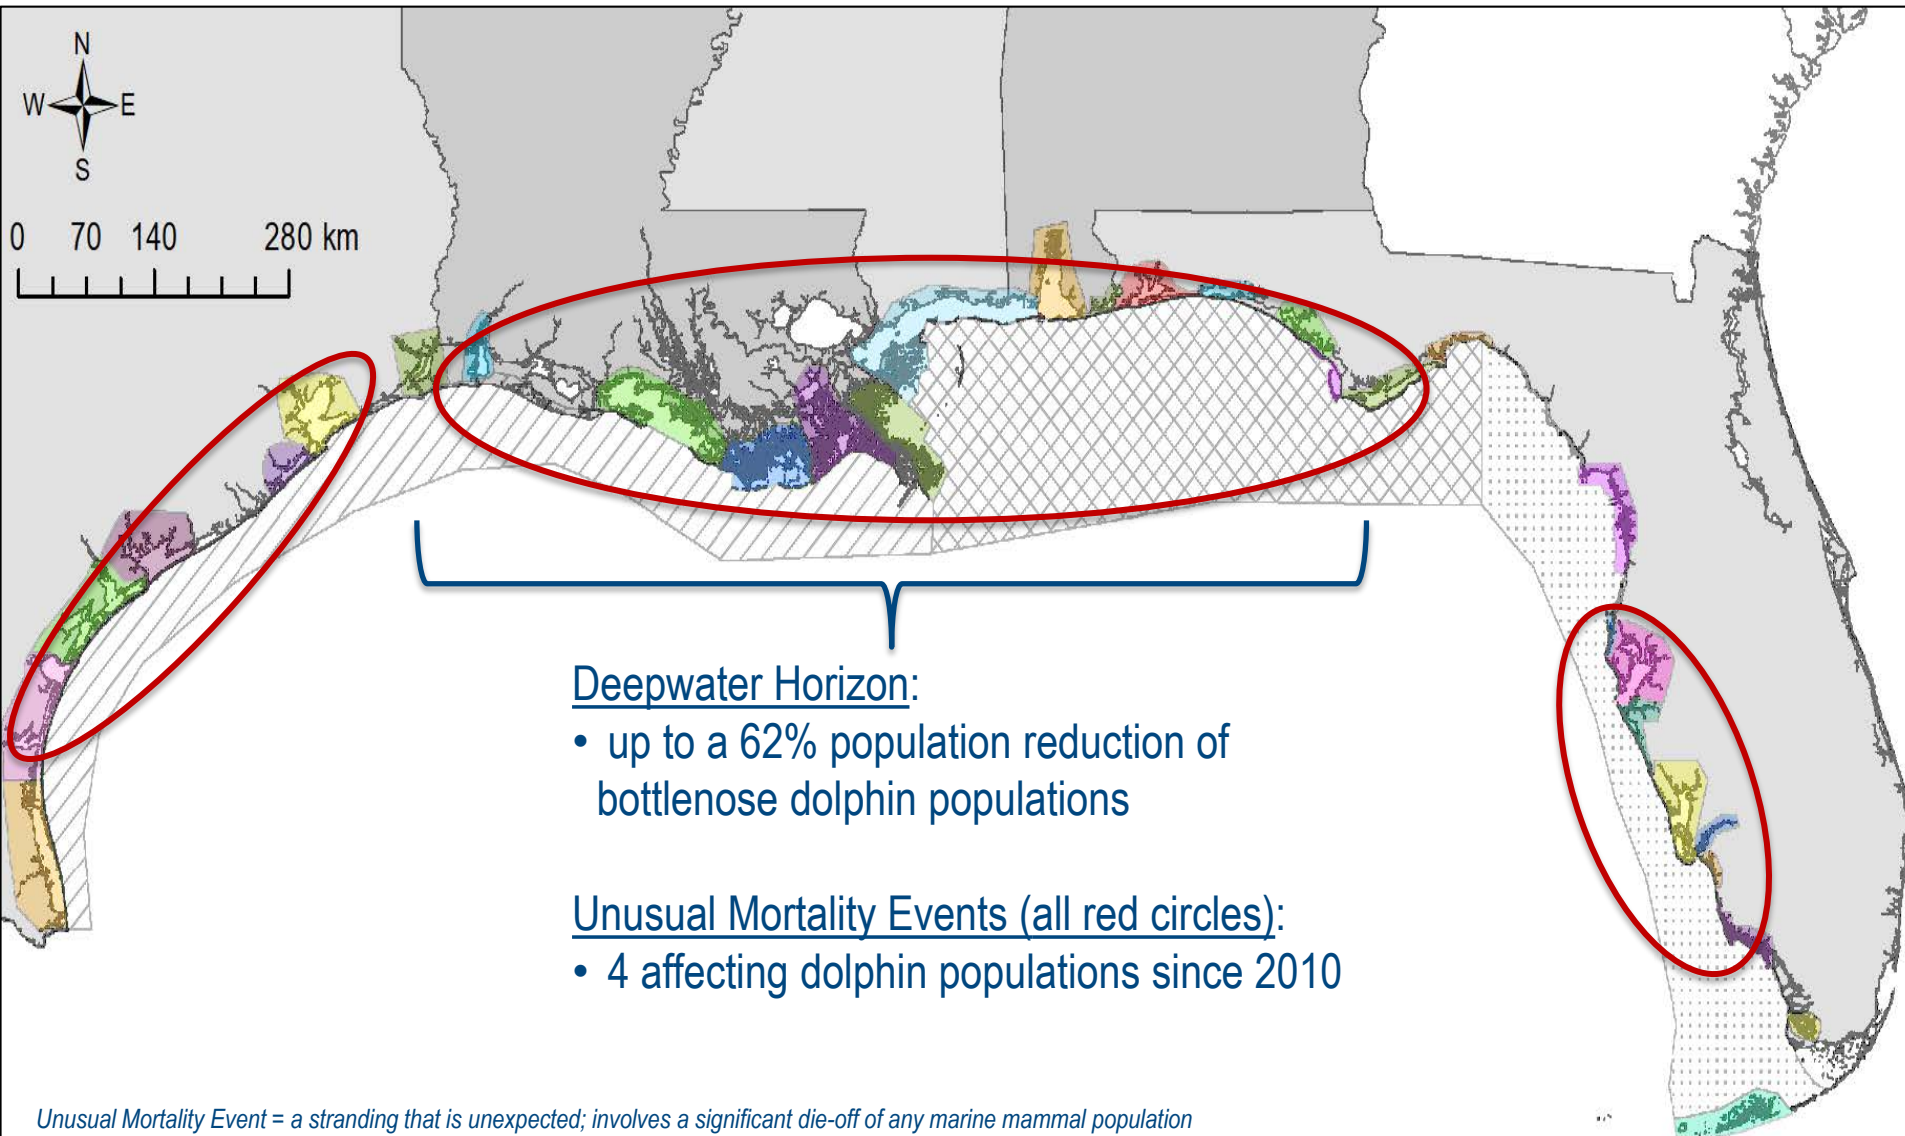

Intentional Harm

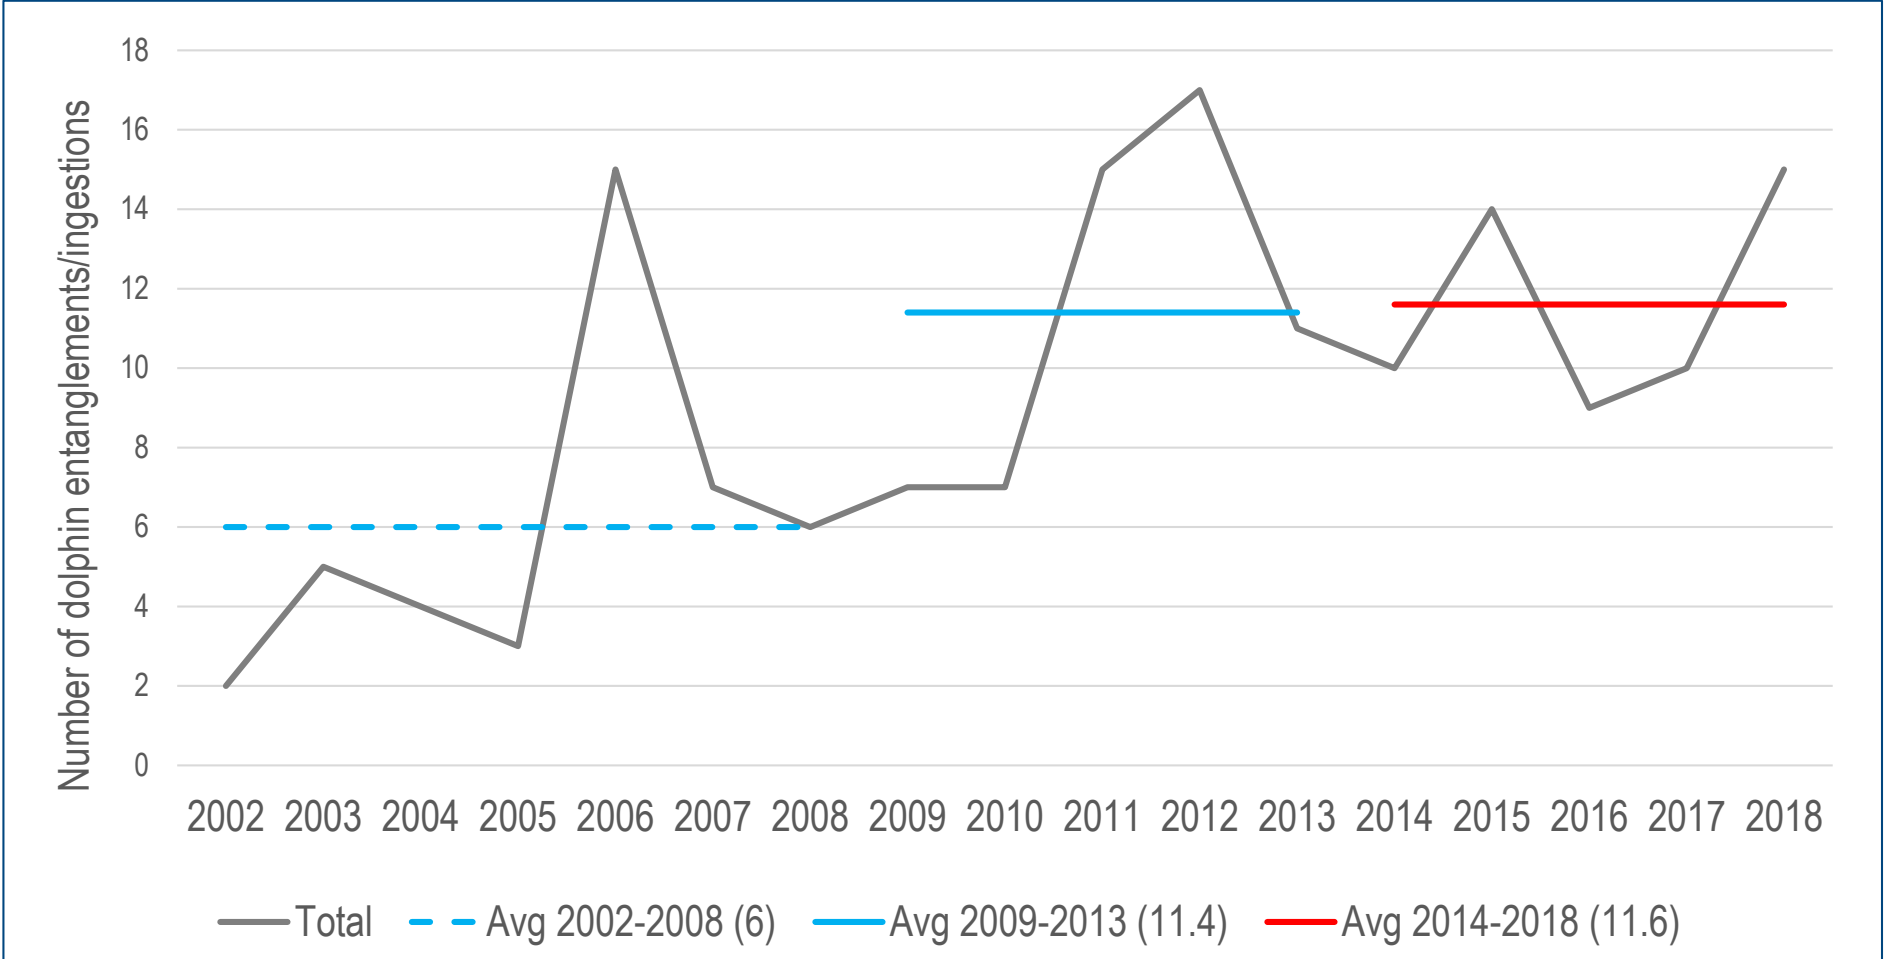

NOAA FISHERIES

Are there more dolphins out there?

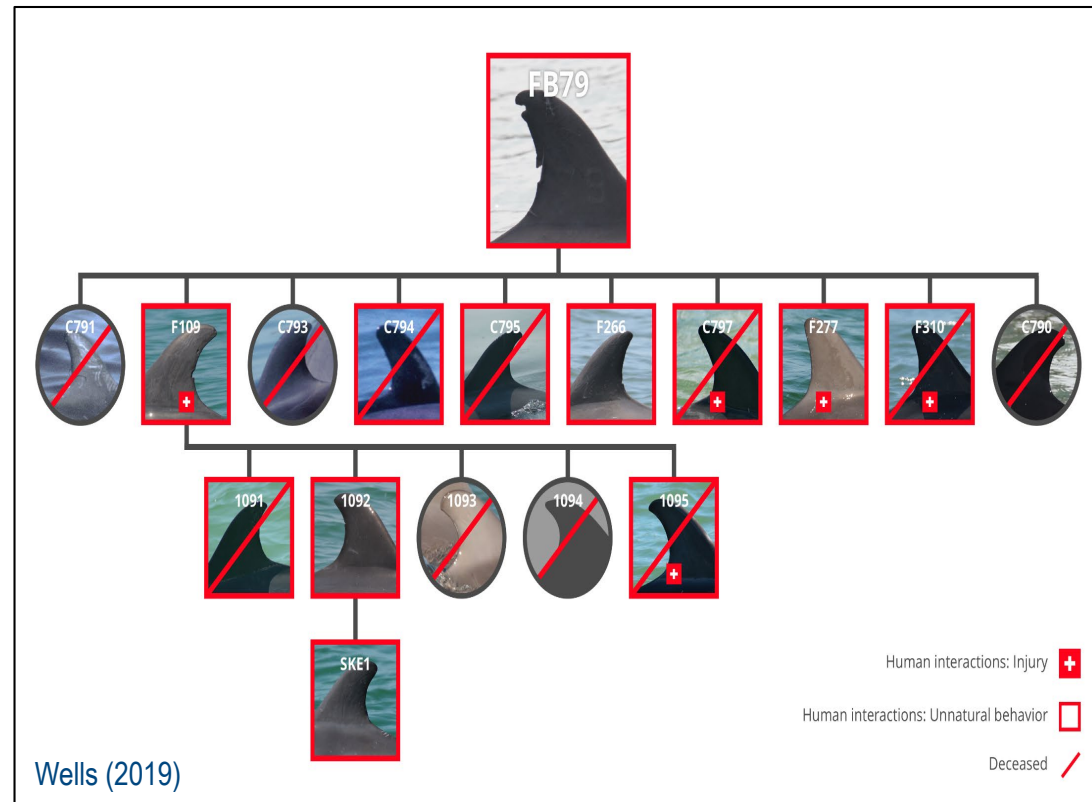

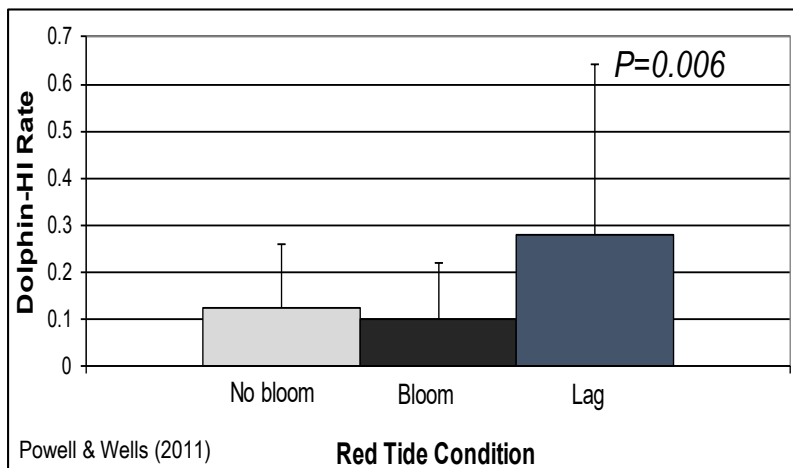

Strandings & Reports of bottlenose dolphins with rod & reel gear attached (2002-2018)

These numbers represent a minimum rate of occurrence and may be 3-11x higher because only a portion of animals that strand are detected & recovered

Contributing Factors

- **Prey Declines:** resource competition, impacts from Deepwater Horizon, and impacts from Red tide
- **Cultural Transmission**

Contributing Factors: Illegal Feeding

“I don’t know of any angler that would intentionally feed dolphins”

How can we work together on a path forward?

- Research
- Collaboration
- Co-Implementation

Marine Mammal Non-Lethal Deterrents

Kristy Long

Gulf Council Meeting

August 24, 2020

Who can deter marine mammals?

The Marine Mammal Protection Act (MMPA) provides an exception to the prohibition on “take” of marine mammals for deterrence.

Section 101(a)(4)(A) allows for:

- Owners of fishing gear/catch and private property to deter marine mammals from damaging gear, catch, or private property
- Any person to deter marine mammals from endangering personal safety
- Government employees to protect public property

“So long as such measures do not result in Mortality/Serious Injury (M/SI) of a marine mammal”

Background – Deterrents in the MMPA

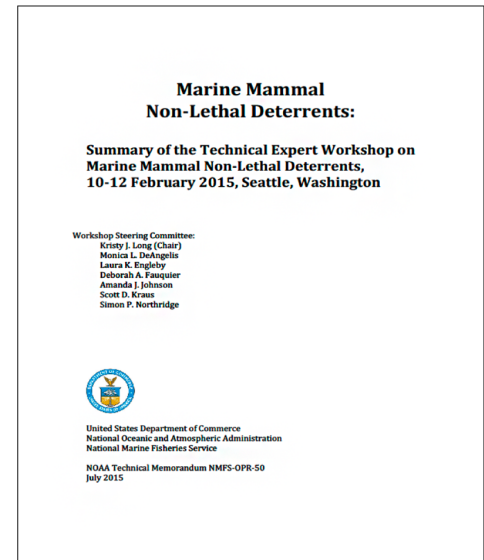

MMPA sec. 101(a)(4) requires NMFS to:

- Publish in the Federal Register **a list of guidelines for use in safely deterring marine mammals.**
- Recommend **specific measures** for deterring marine mammals listed as endangered species or threatened species under the Endangered Species Act of 1973.

And, if NMFS determines, using the best scientific information available, that certain forms of deterrence have a **significant adverse effect** on marine mammals, NMFS **may prohibit** such deterrent methods after notice and opportunity for public comment

Process Overview – Developing Guidelines, Specific Measures, Prohibitions

- Published *Federal Register* notice soliciting public input on deterrents to evaluate and consider for approval (Dec. 2014)
- Convened technical expert workshop (Feb. 2015)
- Analyzed and evaluated potential deterrents to include in guidelines/specific measures (Mar. 2015 – 2019)
- Developed rulemaking to include guidelines, recommended specific measures for ESA marine mammals, and prohibitions (2020)
- Status: Rule and associated documents under agency review and clearance

Scope of Guidelines and Specific Measures

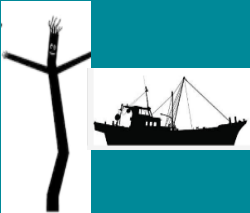

- Marine mammals under NMFS' jurisdiction
 - Cetaceans
 - Pinnipeds (excluding walrus)
 - Including 15 ESA-listed marine mammals
- Evaluate the **impact** of deterrents on marine mammals
 - Mortality & Serious Injury (M/SI)
 - Effectiveness not considered
- Oil spills vs. every day deterrence

Acoustic Deterrents Analyzed

Impulsive: explosive	Impulsive: non-explosive	Non-impulsive
		
<ul style="list-style-type: none">• Fireworks• Bird banger• Bird whistler• Bird screamer• Bear banger using pencil launcher• Propane cannon• Explosive pest control devices (seal bombs & cracker shells)	<ul style="list-style-type: none">• Banging objects (in air/water)• Passive acoustic deterrent (in air)• Low frequency, broadband devices• Pulsed power devices	<ul style="list-style-type: none">• Acoustic alarms (pingers & transducers)• In-air noise makers (air horns, sirens, whistles)• Predator sounds & alarm vocalizations (via underwater speakers)

Non-Acoustic Deterrents Analyzed

Visual	Physical Barriers	Chemo-sensory	Tactile: Projectiles	Tactile: Manual	Tactile: Electrical	Tactile: Water
